

Foreword

From Reinhard Pollice

Darksiders III—what a ride! More than 13 years ago, four ambitious developers set out to create a new game. They wanted to create something truly unique and memorable and eventually they ended up with their take on the Four Horsemen of the Apocalypse.

After years of development, *Darksiders—Wrath of War* saw the light of the day in 2010. It was a truly amazing game and piece of art. Back in those days I wasn't part of the development journey. I was a player who was a fan of *Zelda* and was intrigued by *Darksiders*' take on this gameplay formula.

In 2013, we at THQ Nordic had the opportunity to become the owners of *Darksiders* and from the day we closed this deal we wanted to create a new *Darksiders* game that truly lives up to the franchise foundation and deeply committed fans' expectations.

We chose to give Fury, the third of the Four Horsemen, the opportunity to revive the franchise in a new setup. Luckily, we managed to secure Gunfire Games for development. Gunfire is comprised of a lot of the key talents from the Vigil roster. These brilliant minds were the anchor of the *Darksiders* and *Darksiders II* development teams.

After more than two years, we are here to give you *Darksiders III*. A lot of passion went into this game and we hope to create a lot of good emotions with it. As *Darksiders III* is quite a difficult game, this guide can be truly seen as a survival guide but also gives you a look behind the scenes.

Whip on!

—Reinhard Pollice, Business and Product Development Director and Executive Producer at THQ Nordic.

A Deal with the Council

Riddle of Sorrows

Why did the Creator construct a universe teeming with imperfection, misery, and sin? Among the scholars of both Heaven and Hell, this query is known as “The Riddle of Sorrows.”

If sin is itself a part of the grand design, is not sin then, by definition, divine?

A question for the sages. One particularly restless bunch kept a robust relationship to the topic: the Nephilim. Spawn of Angels and Demons, warriors, relentless, unstoppable. Blood mad. Until they were betrayed by four of their own: War, Death, Fury, and Strife. The Four Horsemen of the Apocalypse.

Inconceivable power was bestowed upon the traitors by those sworn to maintain symmetry betwixt Order and Chaos: the Charred Council. Bear witness as the Council holds court to end the Nephilim war in the name of balance. This is the new pact.

A Deal with the Council

Fury's Pact

The Charred Council has summoned Fury to their chamber, for the balance between Order and Chaos is under threat. The Seven Deadly Sins have been released, and by whom the Council cannot say.

Her brother, War, is shackled, falsely charged with breaking the Seventh Seal and initiating the Apocalypse. Death has gone astray, hoping to prove War's innocence, and Strife attends to other matters. Therefore Fury, alone, must bring the Seven Deadly Sins to heel.

She is capable, and distinctly confident, but she won't do it for nothing. Fury demands the Charred Council name her leader of the Horsemen upon her return. The Council agrees to her demand, willing to trade her obedience for a title, but they insist she bring along a Watcher.

Fury and the Watcher depart at once for Haven, where her pursuit of the Seven Deadly Sins begins.

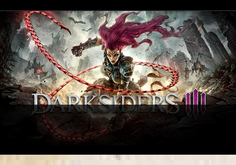

Unleash Fury

Intro to the Basics

Fury, the third Horseman of the Apocalypse, has been sent to Earth to capture the Seven Deadly Sins. Hers is a task once completed long ago with her collected brethren, but now she must ride alone. Whereas War relied on brute strength and Death on agility, Fury's talent as a mage is to blend finesse and rage. To control Fury in combat is to harness one's aggression, to show patience in the face of danger, and to unleash devastating counterattacks that leave no enemy standing.

Darksiders III is about using the powers of the elements—Hollows—to master both combat and exploration. As Fury gains new abilities, the number of places she can access also increases. And by returning to previously visited areas and exploring off the beaten path, she'll find rarer items, save more Humans, and grow ever stronger. But to reach those far-off heights, she must first master the basics. This chapter shows how.

Unleash Fury

Staying Alive

Initial Health: 200

The lengthy green meter in the upper-left corner of the screen is Fury's Health Meter. Taking damage depletes Health, bringing Fury closer to death. The Health Meter doesn't automatically replenish, but Fury can heal herself through the use of Nephilim's Respites and Healing Shards.

➤ ENEMY HEALTH METERS

Focusing on an enemy reveals a similar Health Meter above their head. Always target the enemy with the weakest health first, as even a weakened enemy can inflict fatal damage if ignored.

Fury begins her quest with 200 Health and the ability to carry two Nephilim's Respites. Though 200 Health may sound like a lot, it isn't. Fury is quite fragile in the early going, and Nephilim's Respites aren't replenished quickly, so you must be careful. Avoid rushing into combat without first studying your enemies. Aim to dodge and counter their attacks or suffer the consequences. Though Fury will eventually grow strong enough to support a more aggressive play style, that doesn't come until much later.

About Difficulty Settings

Darksiders III contains four difficulty settings for players to experience: Easy, Normal, Hard, and Apocalyptic. Our recommendation, especially if this is your first time playing a game in this series, is to start with the Normal setting. Then, if the game feels too difficult, consider switching to Easy mode. Be warned, however, that the initial part of the game may prove challenging until you're proficient at the Evade Counter (also known as Arcane Counter) attack. Once you master this technique, the difficulty levels off and the game provides an enjoyable test of skill. This strategy guide was written with the Normal difficulty in mind, though the tactics employed are applicable to all settings. Generally speaking, there is less margin for error on the higher settings.

In short, the higher the difficulty, the harder enemies are to kill, the more damage they inflict, and the harder it becomes to dodge their attacks.

NEPHILIM'S RESPITE

Initial Capacity: 2
Base Healing: 150

Nephilim's Respites are the key way to replenish lost health. These items appear in Fury's quick-access inventory (D-pad left/right to select, D-pad up to consume) and replenish a significant amount of health. Nephilim's Respites are replenished via Health Lurchers, the green phantom-like spirits that escape the bodies of Fury's slain foes. Since they can be replenished for free and are therefore more common than Healing Shards, it's usually a good idea to consume them rather than a Healing Shard, which has to be either found or bought from Vulgrim.

This green Health Lurcher replenishes a Nephilim's Respite.

➤ MAKE ROOM FOR MORE

Keep an eye on your supply of Nephilim's Respites and top off your Health Meter whenever you're holding the max capacity, especially if the Health Meter is less than two-thirds full. This will prevent Health Lurchers from going to waste.

Weapon enhancements can grant Fury the gift of increased Health, Health Regen, and increased Health Lurcher frequency. Consult the *Weapons and Enhancements* chapter for specifics.

Fortunately, it's possible to increase both the capacity and the potency of Nephilim's Respites. Fury can ultimately expand her Nephilim's Respite capacity to six and heal a lot more from each of them. Study the maps contained in the *Hunting the Deadly Sins* walkthrough section for the whereabouts of these items.

Invigoration Core: Automatically increases the storage capacity of Nephilim's Respite by 1.

Rejuvenation Core: Automatically increases the amount of Health restored by Nephilim's Respite by 75.

Nephilim's Respite Upgrades: Running Totals

ORDER FOUND	CORE TYPE	REGION	LOCATION	HEALING	NEPHILIM'S RESPITE CAPACITY
0	—	—	—	150	2
1	Rejuvenation	Nether	Splintered Station	150 (+75)	—
2	Invigoration	Hollows	Blistering Bridge	—	2 (+1)
3	Rejuvenation	Nether	Tangled Grotto	150 (+150)	—
4	Invigoration	Bonelands	Hulking Carcass	—	2 (+2)
5	Rejuvenation	Bonelands	Festering Pool	150 (+225)	—
6	Rejuvenation	Depths	Forgotten Lake	150 (+300)	—
7	Invigoration	Depths	Sunken Tracks	—	2 (+3)
8	Invigoration	Scar	Drilling Annex	—	2 (+4)
9	Rejuvenation	Scar	Drilling Annex	150 (+375)	—
10	Rejuvenation	Vulgrim's Wares	N/A	150 (+450)	—

DEATH, SOULS, AND RESPAWNING

Death is neither permanent nor without repercussions. Upon running out of Health, Fury respawns at the nearest Serpent Hole (waypoint) with full Health and two Nephilim's Respites. Any Souls she had in her possession, however, are dropped on the battlefield where she perished, in the form of a Demon Lurcher. To retrieve them, Fury must make it back to the place of her death and strike the Demon Lurcher. Any nearby Lurchers will be absorbed into the Demon Lurcher until Fury destroys it, so do hurry.

Fury isn't the only one to respawn, however. All the area's enemies have also respawned, meaning she must battle back to the spot where she fell in order to continue on. On the one hand, this makes it possible to farm enemies for additional Souls, but it also risks her arriving low on Health or not surviving the journey back at all. Fortunately, multiple Demon Lurchers can be present simultaneously. So, if Fury dies a second time en route to a previously reached spot, both Demon Lurchers will be available for collection.

Since there is always the chance that you have to take a break from playing before returning to collect the Souls you dropped upon dying, it's a good idea to never shatter any Lurcher Crystals until you intend to spend them. Unlike the Souls in your possession, physical items in your inventory are never dropped upon death.

Lastly, deaths by falling are less painful to recover from. Fury is often returned to a nearby ledge without having lost any Souls. Some of her Health will be depleted as a penalty.

Hades
Sword and Sundering Sin

Sword and Sundering Sin are two of the Aspects of Melinoë that you can unlock for her Weapon. Each Aspect has its own unique Attack, Special, Cast, and Call, and can be upgraded with Daedalus Hammers. Here's how they work:

Sword Aspect Upgrade Path

Unleash Fury

Wrath and Havoc Meters

There are two additional meters at the top of the screen: Wrath and Havoc. While Fury's raw physical strength is certainly impressive, even she would admit it pales in comparison to the devastation unleashed by her Wrath Attacks and Havoc Form.

WRATH

The yellow meter beneath the Health Meter is known as the Wrath Meter. When it's filled, Fury can unleash a potent Wrath Attack that either immediately empties the Wrath Meter or gradually drains it as the Wrath Attack continues. This depends on which Hollow, if any, is active (see the *Weapons and Enhancements* chapter).

ATTACK	XBOX ONE	PS4
Wrath Attack	LB + RB	L1 + R1

In short, Wrath Attacks are potent one-off attacks that hit for colossal damage. While they're active, Fury is not invincible, nor is she guaranteed to kill the enemies she hits, but she will be far more effective in combat thanks to these potent attacks.

Unlike Havoc Form, Wrath Attacks are entirely dependent on the active Hollow. Fury's default Wrath Attack (no Hollow active) deals pure Arcane energy in the form of a massive vortex that surrounds her as she leaps high into the air and then slams the ground beneath her. This Scarlet Strike is useful against large, slow-moving enemies as well as against numerous lesser foes, or when surrounded. Hollow-specific Wrath Attacks are discussed in the *Weapons and Enhancements* chapter.

HAVOC FORM

The spiral-shaped meter atop the screen is the Havoc Meter. It fills slowly over time as Fury inflicts damage upon enemies. Killing enemies generates additional Havoc. When filled, the meter transforms from a spiral into a demon, alerting you that Fury can now activate her alternate form. Havoc Form renders Fury immune to damage and grants her overwhelming power as she dual-wields twin Barbs of Scorn. Few enemies can withstand more than a single attack of her Havoc Form.

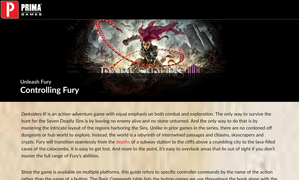

ATTACK	XBOX ONE	PS4
Havoc Form	LB + RT	L1 + R2

Havoc Form lasts 15 seconds (it can be extended with the Chaos enhancement), so use it sparingly and deactivate it as soon the threat is eliminated—there's no need to drain the entire meter if there's no one left to kill! It's best to think of Havoc Form as an emergency escape hatch; save it for instances when you're heavily outnumbered, can't heal without being interrupted, or are going up against an enemy too big to handle.

Havoc Form is perfect for rescuing Fury from a dangerous situation.

Fury moves very slowly in Havoc Form, so trigger it while close to your target enemies. Once it's activated, rapidly tap the Attack button to have Fury swing her twin whips both horizontally and vertically. Watch the meter and either deactivate Havoc Form once the threat has been eliminated or back away from any major threats before it expires.

Unleash Fury

Controlling Fury

Darksiders III is an action-adventure game with equal emphasis on both combat and exploration. The only way to survive the hunt for the Seven Deadly Sins is by leveling no enemy alive and no stone unturned. And the only way to do that is by mastering the intricate layout of the regions harboring the Sins. Unlike in prior games in the series, there are no contained off dungeons or hub world to explore. Instead, the world is a labyrinth of intertwined passages and chasms, skyscrapers and crypts. Fury will transition seamlessly from the depths of a subway station to the cliffs above a crumbling city to the lava-filled caves of the catacombs. It is easy to get lost. And more to the point, it's easy to overlook areas that be out of sight if you don't master the full range of Fury's abilities.

Since the game is available on multiple platforms, this guide refers to specific controller commands by the name of the action rather than the name of a button. The Basic Commands table lists the button names we use throughout the book along with the controller buttons to which they correspond. Please refer to the controller diagram within the game for a complete listing of individual commands for your version.

Basic Commands

ACTION	XBOX ONE	PS4
Movement	LS	L3
Camera	RS	R3
Aim Mode	Click RS	Click R3
Jump	A	X
Action	B	○
Attack	X	□
Arcane/Hollow Attack	Y	△
Focus	LT	L2
Throw	RT	R2
Dodge	RB	R1
Wrath Attack	LB + RB	L1 + R1
Havoc Form	LB + RT	L1 + R1
Select Item	D-pad Left, Right	D-pad Left, Right
Consume Item	D-pad Up	D-pad Up
Quick Select Nephilim's Respite	D-pad Down	D-pad Down
Pause/Inventory	Start	Options

PC CONTROLS!

Those playing the PC version are advised to connect whichever controller is preferred and consult the accompanying table for the appropriate button inputs. Both Xbox One and PS4 controllers can be used on the PC, as well as many others.

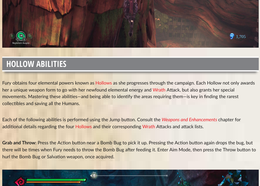

OTHER MOVES

In addition to the standard actions of running and jumping, Fury can perform several other maneuvers that aid her in exploring the landscape. Basic movements are covered here, while Hollow-specific abilities are discussed later in this chapter.

Double-Jump: Press the Jump button a second time after leaping into the air to perform a double-jump. You must first leap to double-jump—you cannot jump while falling unless you initially leapt.

Whip Swing: Fury can use her whip to swing from tree branches and pipes. Sink bars with chains or ropes around them (that's your cue!), leap or double-jump toward one, and then press the Attack button to whip swing. Hold the Attack button during the swing. Fury will automatically release the swing at the far end. It's possible to double-jump out of a whip swing for extra height and distance.

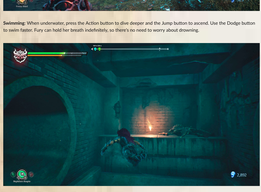

HOLLOW ABILITIES

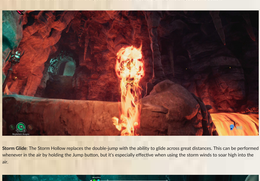

Fury obtains four elemental powers known as Hollows as she progresses through the campaign. Each Hollow not only awards her a unique weapon form to go with her newfound elemental energy and Wrath Attack, but also grants her special movements. Mastering these abilities—and being able to identify the areas requiring them—is key in finding the rarest collectibles and saving all the Humans.

Each of the following abilities is performed using the Jump button. Consult the *Weapons and Enhancements* chapter for additional details regarding the four Hollows and their corresponding Wrath Attacks and attack lists.

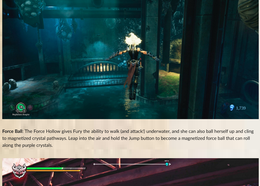

Grab and Throw: Press the Action button near a Bomb Bug to pick it up. Pressing the Action button again drops the bug, but there will be times when Fury needs to throw the Bomb Bug after feeding it. Enter Aim Mode, then press the Throw button to hurl the Bomb Bug or Salvation weapon, once acquired.

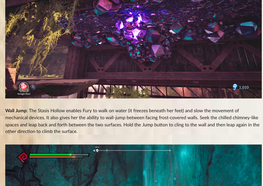

Swimming: When underwater, press the Action button to dive deeper and the Jump button to ascend. Use the Dodge button to swim faster. Fury can hold her breath indefinitely, so there's no need to worry about drowning.

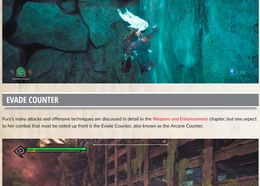

Flame Jump: In addition to being able to walk through fire and lava, the Flame Hollow allows Fury to leap tremendous heights. The Flame Jump can be performed from the ground or in place of a double-jump by holding the Jump button.

Storm Glide: The Storm Hollow replaces the double-jump with the ability to glide across great distances. This can be performed whenever in the air by holding the Jump button, but it's especially effective when using the storm winds to soar high into the air.

Force Ball: The Force Hollow gives Fury the ability to walk (and attack) underwater, and she can also ball herself up and cling to stigmatized crystal pathways. Leap into the air and hold the Jump button to become a magnetized force ball that can roll along the purple crystals.

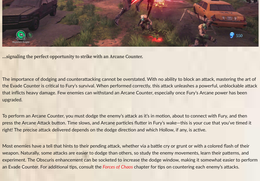

Wall Jump: The Stasis Hollow enables Fury to walk on water (it freezes beneath her feet) and slow the movement of mechanical devices. It also gives her the ability to wall-jump between facing frost-covered walls. Seek the chilled chimney-like spaces and leap back and forth between the two surfaces. Hold the Jump button to cling to the wall and then leap again in the other direction to climb the surface.

EVADE COUNTER

Fury's many attacks and offensive techniques are discussed in detail in the *Weapons and Enhancements* chapter, but one aspect to her combat that must be noted up front is the Evade Counter, also known as the Arcane Counter.

The action shifts into slow motion during a successful dodge...

...signaling the perfect opportunity to strike with an Arcane Counter.

The importance of dodging and counterattacking cannot be overstated. With no ability to block an attack, mastering the art of the Evade Counter is critical to Fury's survival. When performed correctly, this attack unleashes a powerful, unblockable attack that inflicts heavy damage. Few enemies can withstand an Arcane Counter, especially once Fury's Arcane power has been upgraded.

To perform an Arcane Counter, you must dodge the enemy's attack as it's in motion, about to connect with Fury, and then press the Arcane Attack button. Time slows, and Arcane particles flutter in Fury's wake—this is your cue that you've timed it right! The precise attack delivered depends on the dodge direction and which Hollow, if any, is active.

Most enemies have a tell that hints to their pending attack, whether via a battle cry or grunt or with a colored flash of their weapon. Naturally, some attacks are easier to dodge than others, so study the enemy movements, learn their patterns, and experiment. The Obscure's enhancement can be socketed to increase the dodge window, making it somewhat easier to perform an Evade Counter. For additional tips, consult the Forces of Chaos chapter for tips on countering each enemy's attacks.

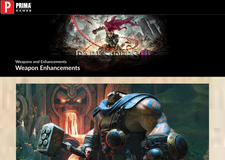

Weapons and Enhancements

About Advanced Abilities

Scorn, the hilt Fury carries with her at all times, was forged long ago by The Mad Smith and has served her well. But the time has come to expand her arsenal. Enhancements and Hollows grant her and Scorn new abilities and forms, helping her to adapt to an ever-changing battlefield. Read along to learn how to put these advanced combat abilities to work.

Weapons and Enhancements

Weapon Enhancements

Upgrading your weapons isn't the only way to boost their effectiveness. Weapon enhancements can be socketed into each of Kyra's six weapons and provide unique bonuses ranging from increased damage to bonus Health or even extended Stasis Field duration. Enhancements can be found in chests, as rewards for Side Missions and Night Ops Nights, or even acquired as a gift. Best of all, they can be swapped from weapon to weapon at no new cost whatsoever.

Swap enhancements between weapons as you see fit.

Enhancements offer an active benefit that relies on using the weapon it's attached to, as well as a passive benefit that comes from simply having the enhancement in the weapon's hotbar active in order to receive the benefit of the enhancement.

Each enhancement is found in its Unfocused state and can be upgraded three times along an Angelic path or Demonic path. From there, finally, a Balanced version of the enhancement can be crafted. Besides maximizing the Angelic and Demonic benefits of the item, Angelic upgrades typically focus on nurturing Kyra's survivability, while Demonic upgrades increase her offensive capabilities.

To achieve a Balanced upgrade, you'll need the 11 artifacts necessary for the other upgrade path.

Angelic and Demonic Artifact locations are marked on the accompanying maps and highlighted throughout the text. You'll need dozens of them to fully upgrade a single enhancement, so don't save one up. An Essence of a Chosen's locations in Kyra's Sanctuary can only be obtained by defeating a Chosen foe. Those are then chosen in the game, finding you'll gain only its fully upgraded version of enhancement.

FORTIFIER ENHANCEMENT

I took strength of heart, and of arms...

Active: +5% Physical and Arcane Damage with this weapon.
Passive: +10% Health
Recommended Weapon: Burst of Storm or Lance of Storm
Whereabouts: Rewarded for Night Ops

Demonic +3	+60%	+3%	6x Demonic Artifact
Balanced	+80%	+18%	1x Essence of a Chosen, 12x Angelic/Demonic Artifact

Relics

TALISMAN OF SIN

AN AMULET, TAKEN FROM ENVY, THAT BRISTLES WITH AN ANCIENT MAGIC.

Allows capture and imprisonment of the Seven Deadly Sins. Glows when a Sin is nearby. This device allows the Sins to appear on the in-game compass, thereby aiding you in locating them. It is used passively.

GATEWAY STONE

AN ENCHANTED STONE, ETCHED WITH ANCIENT MAKER MAGIC.

The Gateway Stone, also known as the Bridge Stone, is given to Fury by Ulthane upon her first visit to the Maker's Forge. This device is used to rescue any Humans that are encountered during Fury's quest. Interact with a Human to use the device.

Save the Humans

There are 20 Humans scattered throughout the world—hidden in caves, barricaded behind obstacles, and tucked away in secret locations. Though they're safe from enemies where they are, they'll be much safer—and more comfortable—back at Maker's Forge. Listen for their hollering and seek them out with the Gateway Stone. Consult the walkthrough and the maps in this book's *Atlas* chapter for details on their whereabouts.

Approach a Human and press the Action button to send them to safety.

Human Locations (in Suggested Order)

NO.	REGION	NEAREST SERPENT HOLE
1	Haven	Crossroads
2	Nether	Splintered Station
3	Haven	Maker's Forge
4	Haven	Skyscraper
5	Nether	Cistern
6	Nether	Tangled Grotto
7	Haven	North End
8	Haven	North End
9	Bonelands	Festering Pool
10	Bonelands	Drowned District
11	Bonelands	Mangled Freeway
12	Depths	Forgotten Lake
13	Depths	Sewage Egress
14	Haven	Crossroads
15	Scar	Drilling Annex
16	Scar	Drilling Annex
17	Depths	Sunken Tracks
18	Nether	Tangled Grotto
19	Nether	Tangled Grotto
20	Bonelands	Cargo Hold

RIDER'S MERCY

A DISTILLED ESSENCE STEMMING FROM DEEP GRATITUDE RADIATES FROM THIS TRINKET, PROVIDING SEVERAL EMPOWERING BENEFITS.

Rider's Mercy is a gift from Ulthane, earned once Fury has saved five Humans. This relic provides a boost to Fury's ability to generate Wrath, both by increasing the quantity of Lurchers freed by killing enemies and by increasing the amount of Wrath each Wrath Lurcher restores. Continue saving Humans and return to Ulthane to receive free upgrades to Rider's Mercy for every five additional Humans saved.

Rider's Mercy Upgrades: Running Totals

HUMANS RESCUED	BONUS EFFECT ADDED
5	+10% Lurchers When Killing an Enemy
10	+10% Wrath Reward from Wrath Lurchers
15	+30% Health
20	+10% Physical and Arcane Damage

SOUL OF ABRAXIS

The freshly severed soul of Abraxis, burning hot with demonic energy. There is a sense that the soul is still sentient. Aware.

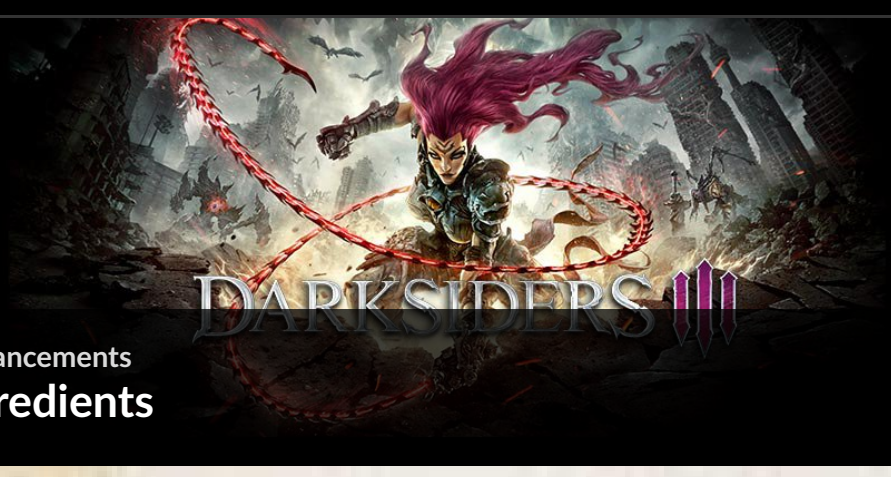

A time shall come for Fury to choose where her allegiance lies, with whom to put her trust. Depending on what you decide, this item may enter your possession.

MYSTERIOUS STONE SIGIL

THE TRINKET TREMBLES, THREATENING TO SHATTER FROM THE IMMENSE PRESSURE OF WHAT IT CONTAINS. VOICES CALL OUT, AT ONCE A LOUD ROAR AND QUIET AS A WHISPER.

The Hollowlord entrusted this stone sigil to Fury, in the hope that she might help to fulfill its purpose. What that may be is unclear.

Weapons and Enhancements

Crafting Ingredients

Ulthane is capable of upgrading Fury's weaponry and enhancements, but he can't do it without a number of rare materials. You'll need to scavenge the landscape for Adamantine, artifacts, and a rare ichor that only Ulthane can make use of. Though most of these materials can be purchased from Vulgrim, his prices are extravagant, not to mention Souls are better spent acquiring Attribute Points or consumables (at least early in the game).

ADAMANTINE

Adamantine can be used to upgrade your weapons. Bring Adamantine to Ulthane to improve a weapon. This strong metal comes in various sizes, from Sliver to Chunk. As your weapons grow in strength, so too does the need for larger pieces of Adamantine.

Sliver of Adamantine: Augments a weapon up to +3. Ulthane could work wonders with metal this strong.

Fragment of Adamantine: Augments a weapon up to +6. Ulthane could work wonders with metal this strong.

Piece of Adamantine: Augments a weapon up to +9. Ulthane could work wonders with metal this strong.

Chunk of Adamantine: Augments a weapon up to +10. Ulthane could work wonders with metal this strong.

ARTIFACTS & ESSENCE

Artifacts are needed to upgrade enhancements, but the kind needed depends on the desired upgrade. It's simply not possible to upgrade every enhancement along a Demonic or Angelic path simultaneously. You must pick and choose which ones to spread your artifacts across and trust that, later in the game, you'll be able to acquire the necessary materials to create Balanced enhancements.

Angelic Artifact: Forged in the early days of the war and infused with divine energy. It radiates righteousness and can be used to augment a weapon enhancement. Ulthane should be able to make use of it.

Demonic Artifact: Cloaked in darkness, the artifact emits the faint screams of cursed souls. Can be used to augment a weapon enhancement. Ulthane should be able to make use of it.

Essence of a Chosen: Essence extracted from the decaying husk of a Chosen. Highly magical, this ichor possesses the potential to unlock incredible power in a weapon enhancement.

Essence of a Chosen Locations

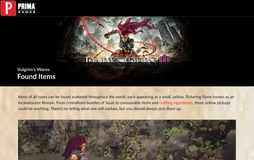

NO.	HOST	REGION	NEAREST SERPENT HOLE
1	Flame Warden	Hollows	Blistering Bridge
2	Templar of the Damned	Depths	Forgotten Lake
3	Agony	Haven	West End
4	The Grock	Scar	Drilling Annex
5	Corrupted Tomekeeper	Bonelands	Cargo Hold
6	Purchase from Vulgrim	—	—

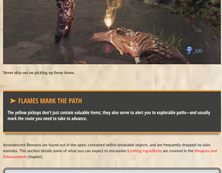

Vulgrim's Wares

Meet Vulgrim

If Fury is to survive her time on apocalyptic Earth, it won't be without a number of restorative and beneficial items. Though each can be obtained by scavenging the environment, breaking objects, and defeating enemies, there is another way to come by the items you seek. His name is Vulgrim, and he deals in Souls.

Items of all rarities can be found scattered throughout the world, each appearing as a small, yellow, flickering flame known as an Incandescent Remain. From crystalized bundles of loads to consumable items and crafting ingredients, these yellow pickups could be anything. There's no telling what one will contain, but you should always pick them up.

Never skip out on picking up these items.

➤ FLAMES MARK THE PATH

The yellow pickups don't just contain valuable items; they also serve to alert you to explorable paths—and usually mark the route you need to take to advance.

Incandescent Remains are found out in the open, contained within breakable objects, and are frequently dropped by slain enemies. This section details some of what you can expect to encounter (crafting ingredients are covered in the *Weapons and Enhancements* chapter).

ITEMS AREN'T RANDOM

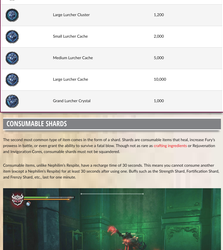

The contents of an Incandescent Remain are not always random. Items found out in the open, within breakable objects, and from enemies are predetermined by the area you're in and the enemy type. Only treasure chests contain random items. Furthermore, red-round enemies always yield Adamantium. Incandescent Remains dropped by common enemies are completely random.

CRYSTALS & SOULS

The most commonly found items come in crystal form and must be "shattered" before being used. Access the Inventory screen and toggle to the Crystals tab to view your collection. Crystals can be either purchased from Vulgrim or sold to him.

Luminous Visage: Unearthed over countless decades of brutal warfare, these tattered remains don't belong to any race. Shatter to gain an Attribute Point. These are quite rare.

Lurcher Crystals: Crystallized collections of spirits can be shattered in your inventory to acquire the Souls trapped within them. Lurcher Crystals are ubiquitous and a valuable source of currency (Souls).

Wait to shatter Lurcher Crystals until you're ready to spend them.

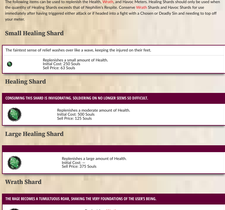

Lurcher Crystals

ICON	SIZE	SOULS CONTAINED
	Small Lurcher Clump	25
	Medium Lurcher Clump	75
	Large Lurcher Clump	150
	Small Lurcher Cluster	400
	Medium Lurcher Cluster	800
	Large Lurcher Cluster	1,200
	Small Lurcher Cache	2,000
	Medium Lurcher Cache	5,000
	Large Lurcher Cache	10,000
	Grand Lurcher Crystal	1,000

CONSUMABLE SHARDS

The second most common type of loot comes in the form of a shard. Shards are consumable items that heal, increase Fury's prowess in battle, or even grant the ability to survive a fatal blow. Though not as rare as crafting ingredients or Rejuvenation and Undiscarded Coins, consumable shards must not be squandered.

Consumable items, unlike Nephilim's Respite, have a recharge time of 30 seconds. This means you cannot consume another item bought a Nephilim's Respite for at least 30 seconds after using one. Buffs such as the Strength Shard, Fortification Shard, and Frenzy Shard, etc., last for one minute.

The aspect buff exeter displays the buff's duration, while the exeter in the lower left shows how long until another item can be used.

➤ SAVE NOW, BUY LATER

Don't let a trio of Legion's items tempt you with each purchase, you should do all you can to not learn to buy any items from him early on. Instead, use your Souls to level up. This way, you'll have plenty of Souls to spend later in the game, as fury approaches her toughest challenges.

Each of the consumables found in the environment can also be purchased from Vulgrim at any of the Serpent Holes. Vulgrim's prices may seem quite reasonable at first, but the cost goes up with each purchase. For example, the first Small Healing Shard costs 250 Souls, but the second costs 500 and the third costs 750 Souls. Similarly, Heavy Shards cost 1,000 Souls at first, but the second costs 1,500.

For this reason, it's wise to refrain from purchasing items unless absolutely necessary. Though you'll have a lot more Souls later in the game, it pays to keep costly lives on hand—like the Rite Undying Shard and Fortification Shard until later. Even better, try to stockpile as many as possible during the early stages of the game, so you have plenty in store when the game gets tougher.

Additional items become available as the number of Deadly Sins dandelies and Fury Feds them in the world.

The price of the Undying Shard can quickly grow too rich if you rely on Vulgrim's supply too heavily.

Meter Replenishment

The following items can be used to replenish the Health, Wrath, and Havoc Meters. Healing Shards should only be used when the quantity of Healing Shards exceeds that of Nephilim's Respite. Conserve Wrath Shards and Havoc Shards for use immediately after having regained either attack or if healed into a fight with a Chosen or Deadly Sin and needing to top off your meter.

Small Healing Shard

The faintest sense of relief washes over like a wave, keeping the injured on their feet.	
	Replenishes a small amount of Health. Initial Cost: 250 Souls Sell Price: 63 Souls

Healing Shard

CONSUMING THIS SHARD IS INVIGORATING. SOLDIERING ON NO LONGER SEEMS SO DIFFICULT.	
	Replenishes a moderate amount of Health. Initial Cost: 500 Souls Sell Price: 125 Souls

Large Healing Shard

	Replenishes a large amount of Health. Initial Cost: — Sell Price: 375 Souls

Wrath Shard

THE MAGE BECOMES A TORNADO'S EYE, SHARING THE VERY FOUNDATIONS OF THE EARTH WITHIN.	
	Replenishes Wrath. Initial Cost: 500 Souls Sell Price: 125 Souls

Havoc Shard

CONTAINS WITHIN IT A RAGING STORM OF TURMOIL.	
	Fuels the Aeon Stone needed to activate Havoc Form. Initial Cost: 500 Souls Sell Price: 500 Souls

Status Buffs

The following shards provide a one-minute boost to Fury's combat abilities. The Strength and Frenzy Shards improve her offensive capabilities, while the Fortification and Undying Shards aid in her defense. The Thorn Shard won't reduce the damage Fury absorbs, but it will harm any foe that commits contact with her.

The Undying Shard is unique in that it lasts until Fury is drained of Health. Then, rather than returning to the nearest Serpent Hole, Fury will immediately resurrect in place with a small amount of Health. This is the need of items found in the environment, so use them sparingly. We recommend using the Undying Shard only for battles against the Chosen, as they tend to be much farther from a Serpent Hole than the Deadly Sins.

Strength Shard

THIS SHARD INDUCES POWER AND DRAWS ENERGY FROM THE SOUL OF THE ONE THAT CONSUMES IT.	
	Converts strength of will into offensive might. Initial Cost: 500 Souls Sell Price: 125 Souls

Fortification Shard

A STURDY-LOOKING SHARD. ITS SURFACE HIGHLY REFLECTIVE. VERY DIFFICULT TO BREAK.	
	Instills a burst of resilience, reducing incoming damage for a short time. Initial Cost: 500 Souls Sell Price: 125 Souls

Frenzy Shard

SMOKE SHAPES GIANT BEAR AND FORTH ON THE SHARD'S SURFACE, FASTER THAN MOST EYES CAN SEE.	
	Temporarily improves Attack Speed, overwhelming enemies with a torrent of swift strikes. Initial Cost: 500 Souls Sell Price: 125 Souls

Thorn Shard

SHEETS A LONE, CORROSIVE AURA THAT ONLY THE USER CAN ABSA.	
	Creates a piercing aura that lashes out at any enemy that gets too close. Initial Cost: 500 Souls Sell Price: 125 Souls

Undying Shard

AN ANCIENT BLESSING FROM THE CREATOR HIMSELF, CHANNELED BY A FORGOTTEN RACE OF OLD STONES INTO A SINGLE SHARD.	
	After she receives a fatal strike, Fury's Health is partially restored. This item must be consumed to function. Initial Cost: 1,000 Souls Sell Price: 500 Souls

VULGRIM'S OTHER ITEMS

Vulgrim has more to offer than just consumable items. Though his prices are high, especially for artifacts, the option to buy crafting ingredients when needing just one or two (especially when Fury only needs smaller Slivers or Fragments of Abundance) is appreciated. He also stocks a very useful weapon enhancement that should be bought early on: the Panther enhancement. Fortunately for Fury, Vulgrim's prices for crafting ingredients do not increase with each purchase, though his wealth is limited.

We don't recommend ever doing it, but you can sell crafting ingredients to Vulgrim.

Ingredients for Sale

ICON	ITEM	BUY (SOULS)	QUANTITY	SELL (SOULS)
	Angelic Artifact	2,000	8	1,000
	Demonic Artifact	2,000	8	1,000
	Sliver of Adamantine	800	Infinite	200
	Fragment of Adamantine	2,400	Infinite	600
	Piece of Adamantine	4,000	Infinite	1,000
	Chunk of Adamantine	—	—	5,000
	Essence of a Chosen	5,000	1	5,000

Special Items

Vulgrim has but two special items for sale, including one that's a critical aid to your journey. Purchase the Unfocused Leviathan weapon enhancement as soon as you can, and certainly prior to hunting Asaiela. The steady health regeneration and the ability to gain Lurchers from broken objects more than offset the price. Read more about this and the other weapon enhancements in the *Weapons and Enhancements* chapter.

Unfocused Leviathan

THOUGH YOU BE ONE ENLING TO HE WHO WITH SLAIN ME, I WILL ASK YOU FOR A TIME.	
	+3 Lurchers when breaking objects with this weapon -10 Health regeneration per minute Cost: 5,000 Souls

Rejuvenation Core

	This stone automatically increases the amount of Health restored by Nephilim's Respite by 75. Cost: 5,000 Souls

Forces of Chaos

Creatures of the Apocalypse

With Angels and Demons locked in a bloody war and the Apocalypse underway, the creatures of Earth—humanity included—had little chance of surviving. Though a few Human stragglers remain, the majority of those who now roam the planet are of no Godly design. In their place lurk demons, skeletons, and foul creatures of every size and color, no doubt the full palette of stuff nightmares are made from.

This chapter introduces the bulk of these creatures, minus several surprises lurking in the foulest recesses of apocalyptic Earth. Some are deadlier than others, particularly those resistant to Fury's Arcane and Hollows powers. Yet, even the lesser foes can prove dangerous in numbers. So study up, learn your foes' weaknesses and their tendencies, and rend every last Lurcher from the horrible creatures!

Forces of Chaos

Swarm

Primary Region: Haven, Bonelands

ENEMY	SIGNATURE ATTACK
Swarm	Lunging claw swipe
Swamp Swarm	Toxic Spore toss

Cursed with tempers as unfortunate as their appearance, the Swarm aggressively defend the remnants of Haven, the ruined city they now call home. These hunched-over creatures are often spotted in small groups, clinging to cliffs and cave walls, ready to leap down atop Fury when she's least expecting it. Though some are adorned with twin swords on their back, most rely on their claws in combat. The Swarm are among the least deadly enemies Fury will encounter, but even they can prove dangerous in large numbers.

The Swamp Swarm, lurking primarily in the Bonelands (and a water-logged building in the Skyscraper region of Haven), are similar in size and appearance, but are more durable. Swamp Swarm also possess the ability to hurl toxic spores at Fury. These spores explode on contact, releasing a small but dangerous cloud of noxious fumes.

Forces of Chaos

Sycophants

Primary Region: Haven

ENEMY	SIGNATURE ATTACK
Red Sycophant	Melee weapons
Ranged Sycophant	Throwing daggers
Green Sycophant	Melee weapons
Black Sycophant	Delayed uppercut
White Sycophant	Dual-wielding blades
Sycophant Captain	Charged mace attack
Winged Sycophant	Teleport dual-stab

The most common class of enemy is undoubtedly the Sycophant. These gangly Demons inhabit nearly every corner of Haven and beyond, using their claws in the war against the Angels, tearing Humans from limb to limb, and thriving in the ruined cityscape. It's not uncommon to find a small gang of Sycophants lingering around a campfire cooking a shank of some grotesque meat.

The Red Sycophants and Green Sycophants pose little threat, as their attacks are slow and weak. Close on the Ranged Sycophant as soon as you spot him to neutralize his throwing blades.

The rarer, deadlier Black Sycophant, Sycophant Captain, and White Sycophant are not to be taken lightly. These powerful foes attack with charged attacks (be patient when dodging so as to not evade prematurely), are quite a bit faster, and, in the case of the Winged Sycophant, can even teleport. Fortunately, even the toughest of the Sycophants are primarily standard melee combatants and can be defeated with basic evade-and-counter tactics.

➤ DELAY YOUR DODGE!

Some of the more powerful Sycophant attack with delayed, charged attacks. They try to trick you into dodging early with a slight feint. Be careful not to dodge too soon, especially against the Black Sycophant's powerful right-hand attack.

Forces of Chaos

Suffering

Primary Region: Haven

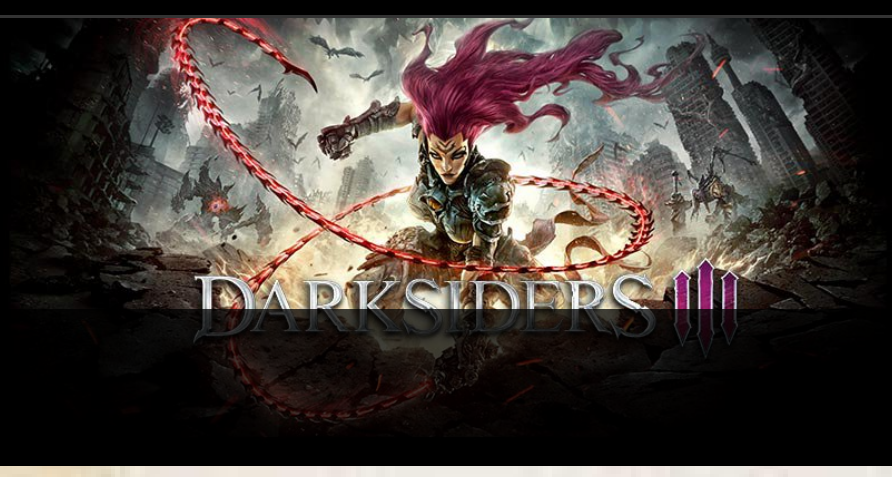

ENEMY	SIGNATURE ATTACK
Suffering	Leaping ground pound

Often found tucked in a ball, their six mighty legs curled beneath them as they sleep, these dinosaur-like creatures sure don't like being disturbed. And nothing gets their attention faster than someone—a Horseman, perhaps—attempting to steal a nearby item.

The Suffering attacks like a raging bull, albeit with four front legs that it uses to pulverize anything in its way. From parked cars to other enemies, nothing is safe when the Suffering gets going. At close range, it will attempt to pound its target into submission with its massive fists. Those who fail to dodge its leaping approach will be subject to a double pound attack.

Fortunately, the Suffering has all the agility of a locomotive and can be easily dodged. Unable to turn at short notice, the beast charges in a straight line, determined to attack a location rather than a moving target. This makes it easy to dodge aside and then attack its rear as it stomps whatever is in front of it.

Although it can leap, it's possible to flee the Suffering, especially by Flame Jumping to higher ground. Beware, however, that it can rip boulders from the ground and hurl them with surprising accuracy.

Forces of Chaos

Insects

Primary Region: Nether

ENEMY	SIGNATURE ATTACK
Chain Spider	Pounce
Sloth Bug	Pincer swing
Mosquito	Stinging jab
Brood Mother	Mandible charge
Brood Mother Spawn	Poison explosion
Mimic	Stabbing pincer
Spidercrab	Charging uppercut
Harvestor	Five-hit combo
Poison Mosquito	Toxic explosion
Blue Mimic	Double-stabbing attack
Scarab	Powerful claw swing

The numerous insect-like creatures inhabiting the Nether (and other regions) are fond of launching surprise attacks, often bursting forth from eggs and cocoons without warning. Fortunately, many of them can be squashed quite readily. Others, however, are not only larger but far more vicious in their attacks.

The Mimic is particularly deadly thanks to its lightning-quick combo attack and poisonous projectiles. Often in a cocoon or curled up like a statue, these creatures are best tackled from the air. The Spidercrab lacks a ranged attack but sprints toward its target, striking with a double uppercut swipe. Dodge to the side as it begins its charge, else it will continue right for where Fury lands.

Care must be taken around airborne enemies, especially those glowing green or red, as they explode on contact, inflicting heavy damage and tremendous knockback. Best to give them a wide berth unless you can destroy them and their hive with Salvation.

➤ TURNED TURTLE

Use the Flip Saw attack to knock a Sloth Bug or Scarab on its back, rendering it as helpless as an upside-down turtle. Slash away with Scorn as it struggles to right itself.

The larger, almost boss-like Brood Mother and Harvestor are fortunately quite rare and lurk only in select caves deep within the Nether. These foes are addressed specifically within the walkthrough, though standard combat tactics generally apply. They're not wholly unlike their smaller brethren.

BOMB BUGS, NO BOTHER

The docile Bomb Bug poses no threat and should not be considered a foe. In fact, its presence is universally a good thing, as it helps Fury to bypass an otherwise impassable obstacle, especially early in the game when her abilities are limited.

Forces of Chaos

Minions

Primary Region: Nether

ENEMY	SIGNATURE ATTACK
Red Minion	Leaping swipe
Blue Minion	Summon backup
Black Minion	Charged claw swipe
Green Minion	Aggressive swipes
Ranged Minion	Thorn-like projectiles

The various Minions are among the most common enemies in the game and the closest in size to Fury. Burlier than the Sycophants and lacking their weaponry, the Minions attack with ravenous speed and razor-sharp claws.

Like many enemies, the Minions can be identified by their color, with red being among the weakest and the black ones being the deadliest (often with red eyes, denoting an enemy that won't respawn). With the exception of the Black Minion, the Blue Minion is the one you should focus on first, as it's capable of calling for backup.

Try to isolate the Minions by getting their attention one at a time, or, if that's not possible, aim to keep Fury's back against a wall so they can't surround her. These enemies are not terribly difficult to defeat, especially once you get the hang of the Arcane Counter maneuver, but they pose a legitimate threat when in a gang.

The base of the main stairs in Splintered Station is one area where things can get tricky. Watch your Health carefully here and don't hesitate to activate Havoc Form if the Blue Minion summons backup or if Fury gets surrounded. Activate the Flame Hollow and try to Flame Jump into a Chimera's Growl to escape being surrounded. Better still, trigger either the Immolation or Cataclysm Wrath attack to knock them back.

Forces of Chaos

Skeletons

Primary Region: Hollows

ENEMY	SIGNATURE ATTACK
Skeleton	Swipe
Skeleton Sword	Jumping swing
Armored Skeleton	Charge attack
Skeleton Archer	Archery attack
Enraged Skeleton	Delayed overhand swing
Undead Champion	Heavy armor and sword

Visitors to the Hollows are quickly introduced to the many forms of Skeletons that call the region home. Often animating from piles of bones, these rattling, shambling horrors attack en masse, with their numbers rivaling those of the Nether's many insects.

Though the most common form of Skeleton is the unarmed, naked Skeleton, most pose a far more significant threat. It's natural to have your focus drawn to the Skeleton Sword and Armored Skeleton, but it's important to listen for the sound of a Skeleton Archer letting an arrow fly. Dash across the battlefield to the Skeleton Archer and dispatch it quickly. Though its green-glowing arrows may not be terribly dangerous, Fury can't afford to have it interrupting her attack when she's surrounded by other enemies.

The Gravel Grinder and other area-of-effect attacks are quite useful for shattering the bones of the Skeletons and knocking back the armored foes, but dealing with the Armored Skeleton takes patience and variety. Mix up attacks by incorporating crossover attacks, such as the Flicker or Spark, to break through its defenses. The Armored Skeleton is quite capable of blocking attacks indefinitely if Fury doesn't mix up her approach.

The Skeleton Sword may swing its sword in a slow, looping arc at close range, but it can also perform a jumping overhand attack that inflicts moderate damage. Similarly, the Armored Skeleton also poses a threat from afar thanks to its ability to throw its sword. This particular foe also appears sporadically in an enhanced version. The Enraged Skeleton has a glowing torso and packs the biggest punch of all Skeletons. Beware the charged overhand slam, as it inflicts heavy Arcane damage. Like the Black Minion and Black Sycophant, the Enraged Skeleton is a rare entity that won't respawn once slain.

Forces of Chaos

Lava Creatures

Primary Region: Hollows

ENEMY	SIGNATURE ATTACK
Lava Abomination	Lava bomb throw
Lava Brute	Overhand axe swing

Living within the molten rivers of the Hollows are two entities seemingly born of fire and steel, with neither blood nor bone between them. The Lava Abomination, smaller in size but often emerging from the lava unexpectedly, hurls molten rocks from afar while marching toward Fury in a steady motion. Once close by, this creature shifts to a melee attack and punches and swipes without hesitation. It's not unheard of for one Lava Abomination to pin Fury in the corner while another hurls rocks from a safe distance.

Lure the Lava Abomination onto solid ground, where Fury's greater agility can keep her out of harm's way. Though it's possible to Arcane Counter, it can be effective to maintain the offensive. Don't give the Lava Abomination the chance to get the upper hand.

The Lava Brute is similar in appearance but much larger and wields a mighty axe. This slow-moving guardian attacks by swinging his axe three times in quick succession. The initial two swings are horizontal, but the third is an overhand attack that gets stuck in the ground. Dodge all three, but wait to counter until his axe is lodged in the ground. Despite his size and the strength of this attack, the Lava Brute is not terribly difficult to beat. But it's in death where the Lava Brute is perhaps most dangerous. Unlike other enemies that silently fade from existence, the Lava Brute explodes with a vengeance upon receiving a fatal blow. Back away quickly, else Fury may join him unexpectedly.

Forces of Chaos

Undead

Primary Region: Bonelands

ENEMY	SIGNATURE ATTACK
Green Undead Angel	Teleport ground stab
Undead Angel Raider	Halberd plasma arc, vertical/horizontal
Undead Scribe	Massive arcane energy blast
Undead Angel	Purple broadsword
Undead Penitent	Summons a variety of Swamp Swarm
Armored Undead Raider	Heavy broadsword
Undead Beast	Ground pound, arcane flame
Red Undead Angel Raider	Arcane projectiles, fast
Undead Angel Brute	Fights like Flame Warden

Many of the varieties of Undead encountered in the Bonelands and elsewhere share the general appearance and behavior of the Swarm, Minions, and Angels of their former life. Demons then, and demons now. Only undead. But several unique species warrant specific attention.

The Undead Angel Raider may resemble an Angel but this enemy has the ability to teleport. Stay on the move whenever they disappear, as they'll likely reappear mid-attack.

Of all the undead creatures to be wary of, the Undead Scribe tops the list. This hideous brute floats around the environment on his throne, firing a mighty energy beam from moderate distance. Those who dare get close enough to attack him must contend with the disgusting claw-like appendage that emerges from his stomach. Fortunately, the Undead Scribe is sometimes distracted by other enemies in the area, particularly Angels. Use this to your advantage whenever possible. And, when not, don't hesitate to employ Havoc Form against him.

Another creature to take seriously is the Undead Beast Not only does it possess the ability to emit a powerful Arcane projectile attack, but its razor-like claws and sky-high ground pound abilities can inflict heavy damage as well. Scan ahead for this creature's presence (each encounter is detailed in the walkthrough) and eliminate any lesser nuisances before engaging it in combat. As with the Undead Scribe, don't hesitate to unleash your Wrath Attacks or Havoc Form against this foe. Or, if that is impossible, run away. Not every enemy has to be engaged.

At the other end of the undead spectrum is the Undead Penitent. Though capable of launching an Arcane projectile from its lamp, this creature primarily stands back from the fray, preferring to summon a steady stream of Swamp Swarm for Fury to contend with. Neither the Swamp Swarm nor the Undead Penitent poses much of a threat (except to distract you from greater threats), and you should take a few minutes to farm the Swamp Swarm for Lurchers whenever the Undead Penitent is around.

Forces of Chaos

Angels

Primary Region: Bonelands

ENEMY	SIGNATURE ATTACK
Angel	Fly while fighting
Angelic Champion	Shield Slam

Battles against Angels are rare but are certainly made memorable by the Angel's ability to fly. Though it's tempting to Flame Jump and try to burn them as they swoop by, it's best to time your attacks on the ground and force them to fight Fury on solid ground. Once out of the sky, their advantage is largely neutralized. Though their broadswords can inflict moderate damage, their attacks aren't difficult to dodge. Chances are, there will be some Minions or Undead in the vicinity to draw their attention from Fury.

The Angelic Champion is encountered once, deep within the Angels' headquarters at the Bonelands. This mini-boss has its own unique set of combat tactics

Forces of Chaos

Fish

Primary Region: Depths

ENEMY	SIGNATURE ATTACK
Demon Fish	Fly while fighting
Deep Lurker	Tentacle swipe
Walking Deep Lurker	Poison projectile

There aren't many enemies in the Depths, leaving Fury to focus on navigating the watery passages of the flooded zone. Nevertheless, there are several threats to be aware of, including two that will require her to activate the Force Hollow, as that's the only way she can attack underwater.

Though it's easy to swim past the Demon Fish, these fast swimmers typically attack in groups and are worth eliminating on sight. A single slash of the Barbs of Scorn is all it takes to kill them. Conversely, the Floating Mine emerge from the pitcher-like seafloor plants and detonate on contact. Dash past them before they home in on Fury's location.

Like the Demon Fish, the Deep Lurkers often attack in multiples, but these creatures are more deadly. They'll swoop down around Fury's position and lash out with their numerous tentacles. The only way to repel them is to switch to Force form and strike them with the Barbs of Scorn or Mallet of Scorn. We recommend the former, as the Mallet is quite slow to swing against agile enemies. The Walking Deep Lurkers attack in similar fashion but add a toxic projectile to their arsenal of attacks. Close on them quickly!

Forces of Chaos

Legion

Primary Region: Scar

ENEMY	SIGNATURE ATTACK
Phantom Wretch	Pickaxe swing
Phantom Guard	Axe attack
Trauma	Claw uppercut attack
Phantom Guard Ballister	Throws spear from afar
Phantom Guard Captain	Shield slam, frenzy call
Taskmaster	Summons a clone to attack

The various Phantoms that work at and guard the area of Scar share similar traits but pose different levels of threat. The Phantom Wretches are quite weak and can be dispatched easily, but the units that watch over them, particularly the Phantom Guards, are much tougher. These enemies not only possess much greater durability and strength, but also they can use their horn to call for reinforcements.

When fighting a group of Phantoms it's often best to ignore the Phantom Wretches, because they will likely get struck by the backswing of Fury's various attacks. Consider them collateral damage as you focus on the mid-tier enemies. Assuming a Trauma isn't present, Fury should work to eliminate the summoned enemies—typically on the order of a Phantom Guard—first, before the horn is blown again, thereby stirring them into a frenzy.

The Trauma and Phantom Guard Captain are much larger foes, often alone or with only one other enemy by their side. These enemies are best handled with either the Force Hollow or Stasis Hollow active, so as to be able to use their potent Wrath Attacks. Activate Stasis Shield or Cataclysm at the first sign of danger, especially if other enemies attack or if you're out of Nephilim's Respite. Their attacks aren't particularly hard to dodge at this point in the game, but Fury has come too far to take any unnecessary risks by the time she reaches Scar.

Forces of Chaos

Other Creatures

AVARICE CHILD

Primary Region: Nether

ENEMY	SIGNATURE ATTACK
Avarice Child	Bomb Toss, Traps

The knee-high children scampering about in the corner of the museum section of the Nether are neither cute, nor harmless. These feral bomb-tossing Avarice Children will do their best to lure Fury into one of the many traps they've laid in defense of their territory. Dodge their explosive bombs and close on them carefully as you zigzag around the many tripwires.

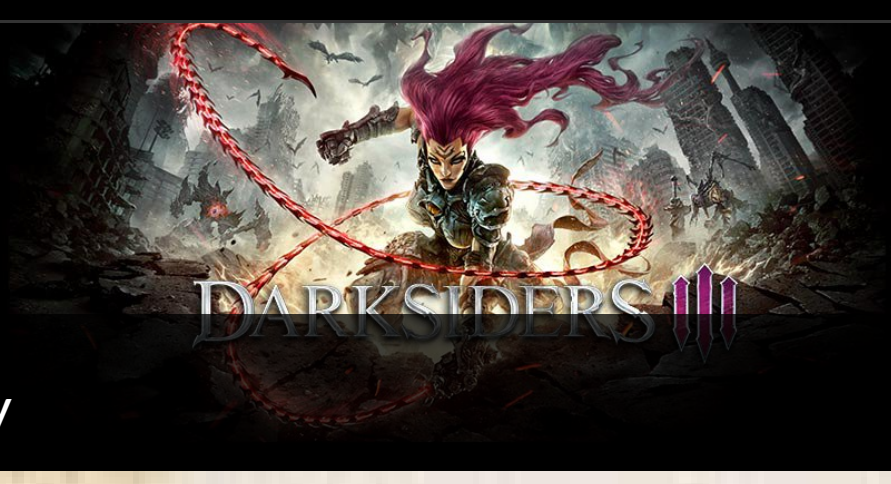

MANSK

Primary Region: Bonelands

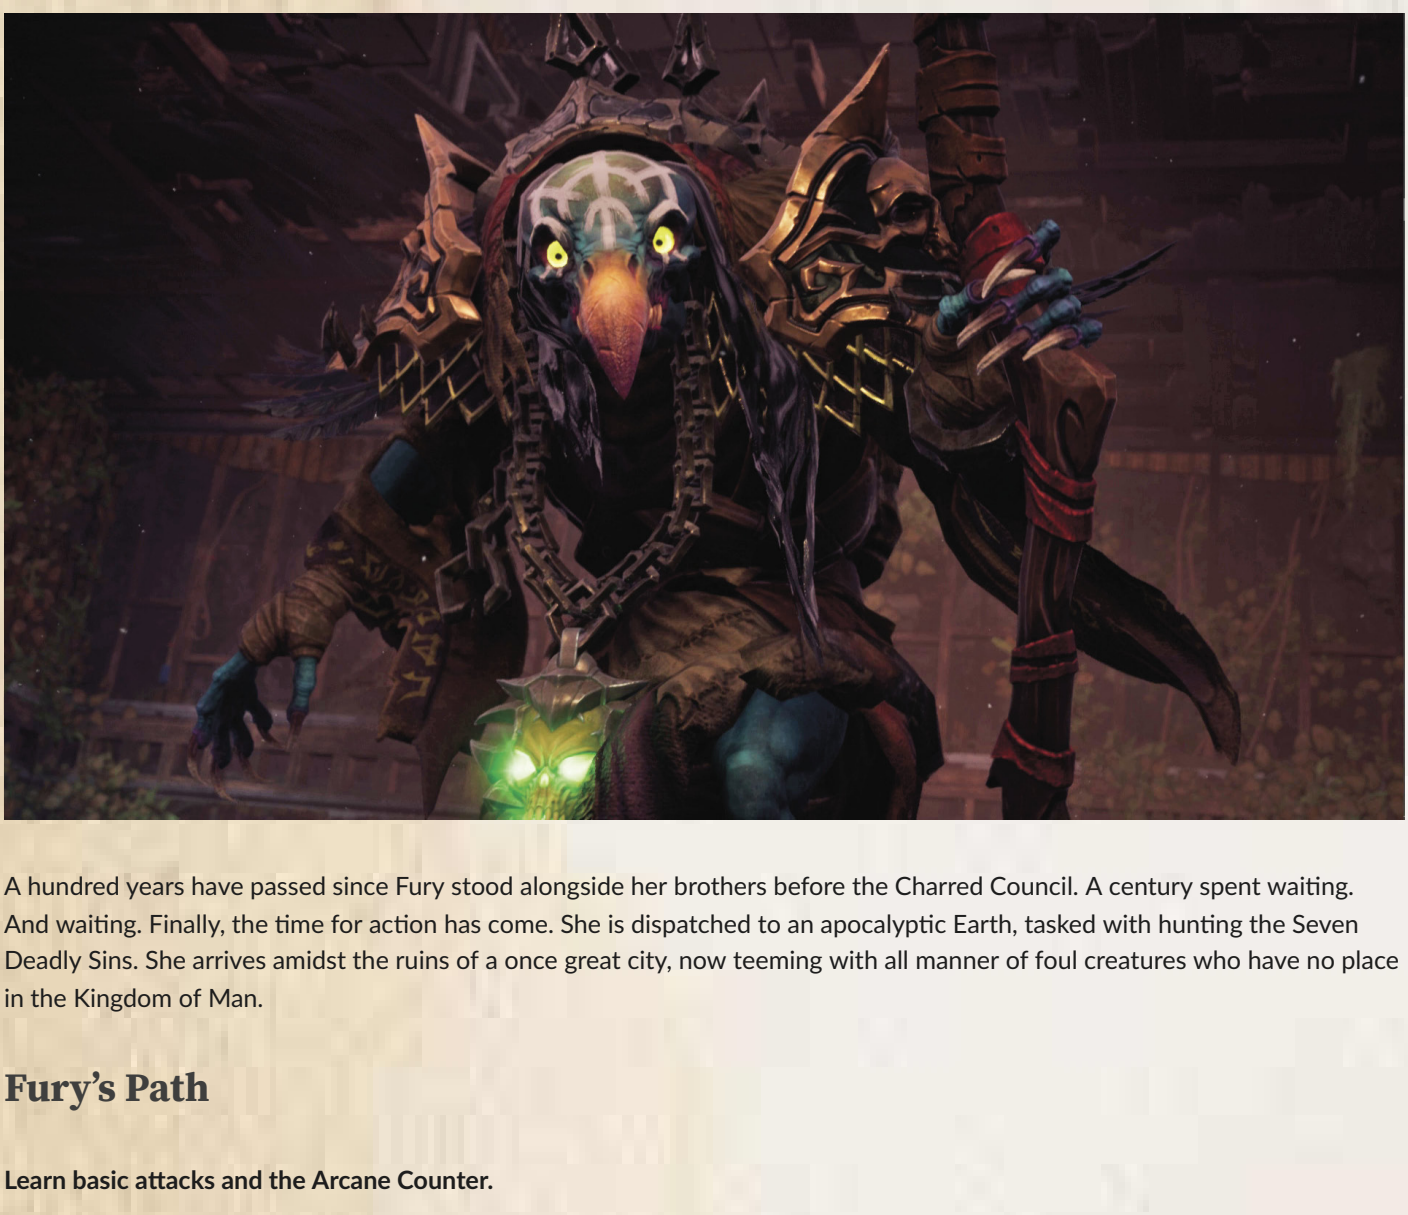

ENEMY	SIGNATURE ATTACK
Mansk	N/A

One of the largest creatures Fury will encounter in her journey, the Mansk is utterly harmless. This jellyfish-like creature seemingly floats above the ground, suspended by its lengthy tentacles, and only moves when struck by Fury's weaponry. Lash out with Scorn to drive it in the direction where you could use some additional height. Flame Jump onto Mansk or climb its tentacles with the Action button. Either way, this creature exists as a living, moving platform for Fury to use as needed.

Envy

Path to Envy

A hundred years have passed since Fury stood alongside her brothers before the Charred Council. A century spent waiting. And waiting. Finally, the time for action has come. She is dispatched to an apocalyptic Earth, tasked with hunting the Seven Deadly Sins. She arrives amidst the ruins of a once great city, now teeming with all manner of foul creatures who have no place in the Kingdom of Man.

Fury's Path

Learn basic attacks and the Arcane Counter.

Perform a whip swing.

Capture Envy in the Talisman of Sin.

Fury begins her hunt with only her Barbs of Scorn and two Nephilim's Respite. Make the most of the few enemy encounters present at the Crater, as the boss battle comes quickly. Aim to isolate your foes one by one; be patient and allow them to attack first. Dodge their attacks, then execute the Arcane Counter technique. This skill will prove vital in your fight against Envy.

There are no upgrades available at this point and only a Small Healing Shard to collect in this brief opening area. Don't swing across to the building until you have collected 200 Souls from the enemies and filled the Wrath Meter.

Envy

Haven: Crater

ATTACK, DODGE, AND EXECUTE AN ARCANE COUNTER

The Swarms chilling around the statue near the impact crater pose your first minor threat. Allow them to attack one by one and then beat them back with the Burst of Scorn. If only takes three quick strikes to defeat each of them.

Fury readers quick reverse of Dodge like this [Review].

There's a Ranged Sunspheist off to the right. Get the drop on him by sneaking up behind the columns. He's less of a threat at close range, especially when he doesn't see you coming. Ranged enemies pose a major threat when you're in the midst of fighting multiple opponents. Look for the telltale source of an enemy attack and dodge away, even if you're currently focused on another enemy. When at all possible, dash forward to the ranged attacker and dispatch it first.

Precise, dodge the attack, then counter.

Whatever their contents, these yellow pickups are critical.

Charge the enemy near the fire spit, hit it with a Flip Saw, then collect the Small Healing Shard by the grass. Normally, you wouldn't want to use it unless necessary, but it's important for your Nephilim's Respite for the upcoming fight with [Envy].

INCANDESCENT REMAINS

Items of all types are found scattered throughout the world, and they all appear as yellow bulbs of light, such as this one. From Lucrher Crystals to Healing Shards to crafting ingredients and weapon enhancements, there's no telling what the items will be, but they're always worth grabbing.

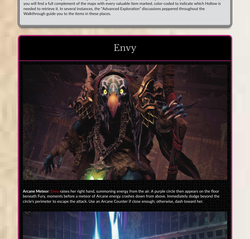

These items can be found out in the open (often hinting at a side area to explore), are dropped by enemies you defeat, or are even within breakable objects. Always take a moment to smash the many breakable objects decorating your surroundings.

WHIP SWING TO THE BUILDING

[Envy]'s fun, but you'll need to get across the chasm between the street and nearby building. Jump and double-jump up the terraced ground near the pit and spot the chains and pipe suspended by the crane. Double-jump for the pipe and then whip [envy] across to the building.

Take a moment to whip [envy] back and forth across the gap to get a feel for the maneuver. Fury can double-jump into a whip swing and also jump again after releasing her whip. Aim to release from the whip swing when she's nearing her max height but still maintaining forward momentum.

Whip [envy] until Fury is just below max height, then release.

[Envy] is directly ahead. Use the Small Healing Shard if you've taken moderate damage but still have at least half of your health. Use a Nephilim's Respite if heavily damaged; otherwise, advance down the hallway.

➤ CHECK YOUR DIFFICULTY

To [envy] quickly [envy] **can be bursting. Hopefully, with the tactics outlined here, you'll breeze your way to victory with minimal trouble. If, however, you find yourself dying over and over, stop now and start over on an easier setting. Darksiders III can be a challenging game for those unaccustomed to action-adventure games. There's no shame in playing it on Easy mode your first time through.**

➤ WRATH SHARD NEARBY

Smash the debris beneath the suspended pipe to find an item pickup. Though many item drops are random, this one is consistently a [Wrath] **Shard.**

ABOUT THE WALKTHROUGH MAPS

The maps included throughout the walkthrough aim to help in navigation, as well as collecting valuable items and [Secrets]. Enemies are rarely shown on the maps, as their placement can change from one playthrough to the next. Try to avoid confusion. Only items placed in the open (not dropped by breakable objects or fallen enemies) are marked. Rather than clutter the maps with countless Lucrher Crystals and consumables, the maps focus on the most valuable items.

Of course, there are many, many items hidden in out-of-the-way areas that can only be reached after Fury has gained her full assortment of powers. For help in locating these items, consult the maps in the [Extra] portion of this book. There you will find a full complement of the maps with every valuable item marked. color-coded to indicate which Hollow to acquire the item from. Also, see the "Backtracking Through Acquired Explorations" discussions peppered throughout the Walkthrough guide you to the items in these places.

Envy

Acuna Meteor [Envy] raises her right hand, summoning energy from the air. A purple circle then appears on the floor beneath Fury, moments before a meteor of Arcane energy crashes down from above. Immediately dodge toward the circle's perimeter to escape the attack. Use an Arcane Counter if close enough; otherwise, dash toward her.

Staff Sweep When within melee range, [Envy] rears back and swings her staff horizontally in a sweeping arc from her left to her right. Listen for the sound of the staff charging (and watch for it to turn green) and immediately dodge to the side or jet the magma the swing, then counter [Envy] often performs this attack twice consecutively.

Teleport Shockwave After taking damage, [Envy] quickly twists in place and then teleports high into the air. Release the Focus button and track the trail of Arcane energy. Watch for [Envy] to ascend the ground, then double-jump over the attack. Turn around quickly to track her position. [Envy] typically performs this attack three times in quick succession. Attack only after it's clear she's not teleporting again.

Arcane Explosion If left to absorb enough energy between phases of the battle before being interrupted by Fury, [Envy] will eliminate a ball of Arcane energy that is impossible to dodge. Close as her position and hit her with an Aerial Cross Slash to interrupt this explosive attack.

The battle takes place in three phases, with [Envy] destroying the floor and plummeting herself and Fury deeper into the bowels of the building with each phase. Use the time between phases, when [Envy] is recharging, to consume a Nephilim's Respite (or Small Healing Shard if necessary).

Focus on [Envy] the moment the battle begins and dodge the purple glow that forms on the floor. You need to be outside the attack's area of effect when it explodes. Stay close to [Envy] because she can't teleport away. Counter her attacks to help with her stun! Dodge the attack and execute an Arcane Counter. She'll likely attack twice, then teleport away. Pace her direction and dodge away over the spreading shockwave each time she pounds the floor. Double-jump toward her after the third shockwave and strike with the Burst of Scorn, but be ready to dodge and perform an Arcane Counter.

Nephilim's Wrath will only deal [Wrath] until the third phase of the battle, in case you're taken too much damage. Those more skilled with the Arcane Counter can perform a Scarlet Strike in this first phase, as there is time to earn enough [Wrath] to replenish the meter and use it a second time.

Once reduced to 75 percent of her health, [Envy] will smash through the floor, causing her to fall to the lower level. Though she'll most decisively jump over Fury's head, around the floor, this is no time to delay! She's absorbing energy to unleash a powerful attack that can't be dodged—it can only be interrupted.

Consume a Nephilim's Respite if you have less than half your Health, then run to the left-hand corner below [Envy]. Double-jump from the rubble under the ledge, then turn left and make your way around the perimeter of the room. Double-jump and dash to the ledge on the opposite side of the room. Dash toward [Envy] and perform an Aerial Attack again after releasing the whip swing. Once on the ledge nearest [Envy], leap toward her and perform an Air Attack.

Once reduced to roughly one-third of her health, [Envy] again interrupts the battle. Consume a Nephilim's Respite if moderately damaged, then scale the ledges to interrupt her power absorption. Leap from the rubble to the ledge over Fury's left-hand shoulder when the cutscene ends and ascend the ledges as before. The first pipe you'll whip-swing from is directly above [Envy]. Whip-swing toward her, then immediately begin swing to keep climbing. You'll need to link up consecutive whip swings to traverse the lengthy side of the room.

Unleash a [Wrath] Attack before [Envy] rises to her feet, then resume the tactics outlined above to finish her off. With the **Talisman of Ire** in hand, pick up the Lucrher Crystal that drops and exit the basement via the hole in the wall.

With the Talisman of Sol in hand, Fury sets out toward Gaea and the next Deadly Sin, to unleash its counter-ten extraordinary overthrow(s). But Wrathful warns that the others will not be nearly as easy to locate, nor are they as hostile or combat. Fury soon learns that Wrath is underground, in a region known as the Nether.

Fury's Path

Reach the Maker Tree within Roots.

Barter with Valgrim.

Forge a bond with Ullmanz.

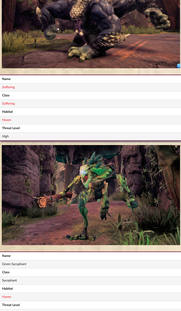

Seek a way below ground.

Descend to the subway system.

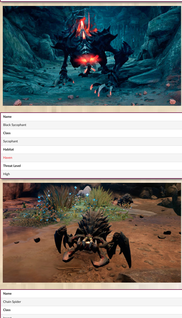

Locate Wrath within the Nether.

This is a transitional phase in the game, as Fury begins to encounter isolated, deadlier enemies while you, the player, are only beginning to unlock the Nether and Wrath's domain. Fury's Path is a fairly straightforward quest, although the Nether's enemies can be a bit too overwhelming for new players and require some fine-tuning. Fortification Shards and Wrath Shards will prove essential against the tougher creatures, so conserve them for when they matter most.

Fury will be far stronger at the end of this chapter than she is now. Aim to collect as many Souls as possible—leave no enemy alive—and upgrade her Strength, Arcana, and Health, in that order. Seek every pickup and aim to upgrade the Battle of Scorn before locating Wrath. Even in its "unfocused" form, the Fortifier-wrapped enhancement is a tremendous ally. Use it, Lucifer, constantly. Leaving your Lunchie Crystals for one in purchasing the Leviathan-weapon enhancement.

Save the Humans

1. Drop through the hole near the bus at Crossroads to find the first Human.

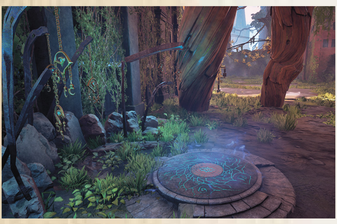

2. Crawl through the narrow tunnel at Splintered Station after defeating the Black Scrapheart alongside the cliff to find another.

Wrath
Haven: West End

FINDING UNSAFE HAVEN

Exit the building through the hole in the wall and climb the stepped cliffs to the top of the chasm. There, the Watcher will accompany Fury on her walk, briefing her on the difficulty of the quest to come. Heed her warning well, because the six remaining Deadly Sins will be far more difficult to pursue.

SERPENT HOLES

The empty dais is a Serpent Hole, but this particular one isn't currently active. You'll meet the owner of these portals soon enough. Save your Souls and Lurcher Crystals for when you do.

Swing across the chasm and sweep the street free of Sycophants and smash through any small, breakable objects you see to uncover the hidden pickups. Though Fury needs to descend through the building across the street, it's best to clear the enemies from the upper floors first. Harvest all the Souls available from the upper floors, then leap down to the ground level/ground level.

Arcane Counters make quick work of most enemies.

GREATER POWERS AWAIT

Fury cannot yet reach the glowing pickups across the trench at the end of the road. These and many others will only be available upon a return visit, after Fury has gained additional powers (Hollows). Consult the maps for passageways and items that require these advanced abilities.

Descend the ramp to the parking garage, swing across the pipes on the right, and descend into the cave with the glowing mushrooms. Crawl through the narrow tunnel to the canyon beyond the building. The Ranged Sycophant on the ledge across the clearing is your main threat here. Ignore the lesser foes, dodge forward beneath his thrown blades, and climb up to fight him. Be sure to reserve your Wrath for a fight to come.

➤ WAIT TO SHATTER

Refrain from shattering Lurcher Crystals until you're about to spend the Souls contained within. This eliminates the chance of losing them in combat if you die and don't have time to recollect them.

Look out over the enemies near the cars and bait the patrolling one into combat atop the ledge. Then, with Health and Wrath full, approach the sleeping Suffering on the left. Strike out to wake him up, dodge his attack, Arcane Counter, unleash a Scarlet Strike, then circle around. Once it's been defeated, grab the **Fortifier enhancement** on the ground where he slept. Socket this item into the Barbs of Scorn to gain an immediate boost to Health and Physical and Arcane Damage dealt with Scorn. Fight through the brick building beyond the fire pit to reach Haven proper.

Ignore the lesser Sycophant as you close on the ranged Ranged Sycophant atop the ledge.

AN ENCOUNTER WITH VULGRIM

Tackle this burly Suffering before the others know you're there.

Fury must cross along the tree root to reach the distant building, but don't head off just yet. Gain the walkway to the right of the tree branch and advance slowly. A single Swarm appears alone, but several more are right behind him, along with a Green Sycophant. The trick is to fend them off without falling from the ledge. Put the Flip Saw and Ripcord attack to use to keep your attacks moving in a straight line. Perform a Gravel Grinder ground slam to knock them back if they get close, or opt for the Scarlet Strike if you have a full Wrath Meter. These enemies aren't tough, but fighting them in tight quarters can prove tricky. Grab the Large Lurcher Clump from the alley around the corner.

Be extra careful fighting this many foes on such a narrow path.

Fight through the office building across the tree branch and smash the desks and chairs for Lurcher Crystals. Break through the flimsy barricade in the hallway to meet Vulgrim, Merchant of the Damned. Vulgrim is useful for three things: feeding Souls for level upgrades, trading Souls for items, and for traveling through the Serpent Holes.

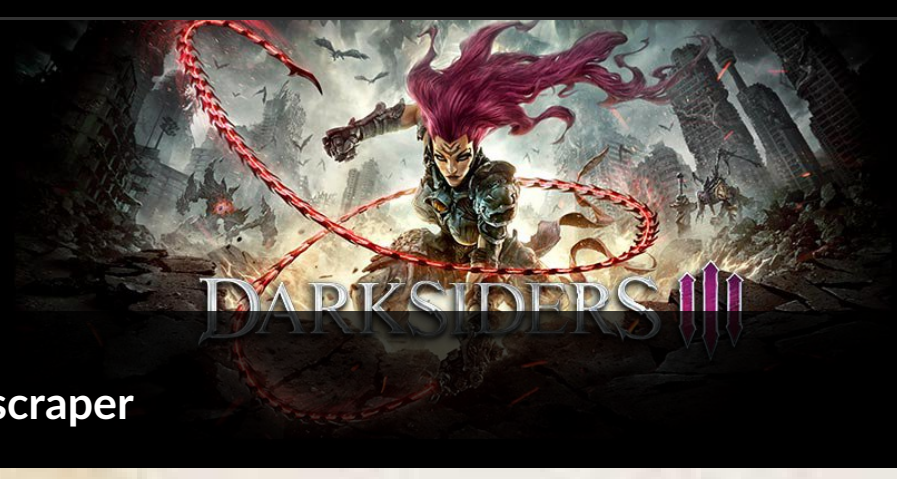

Dealings with Vulgrim are a necessary evil.

SERPENT HOLES

Vulgrim operates a network of pathways that flow throughout the world and beyond. Use these waypoints to fast-travel throughout the world. This ability is particularly useful for returning to previously visited areas with new abilities and for visiting Ulthane, the Maker who provides weapon upgrades.

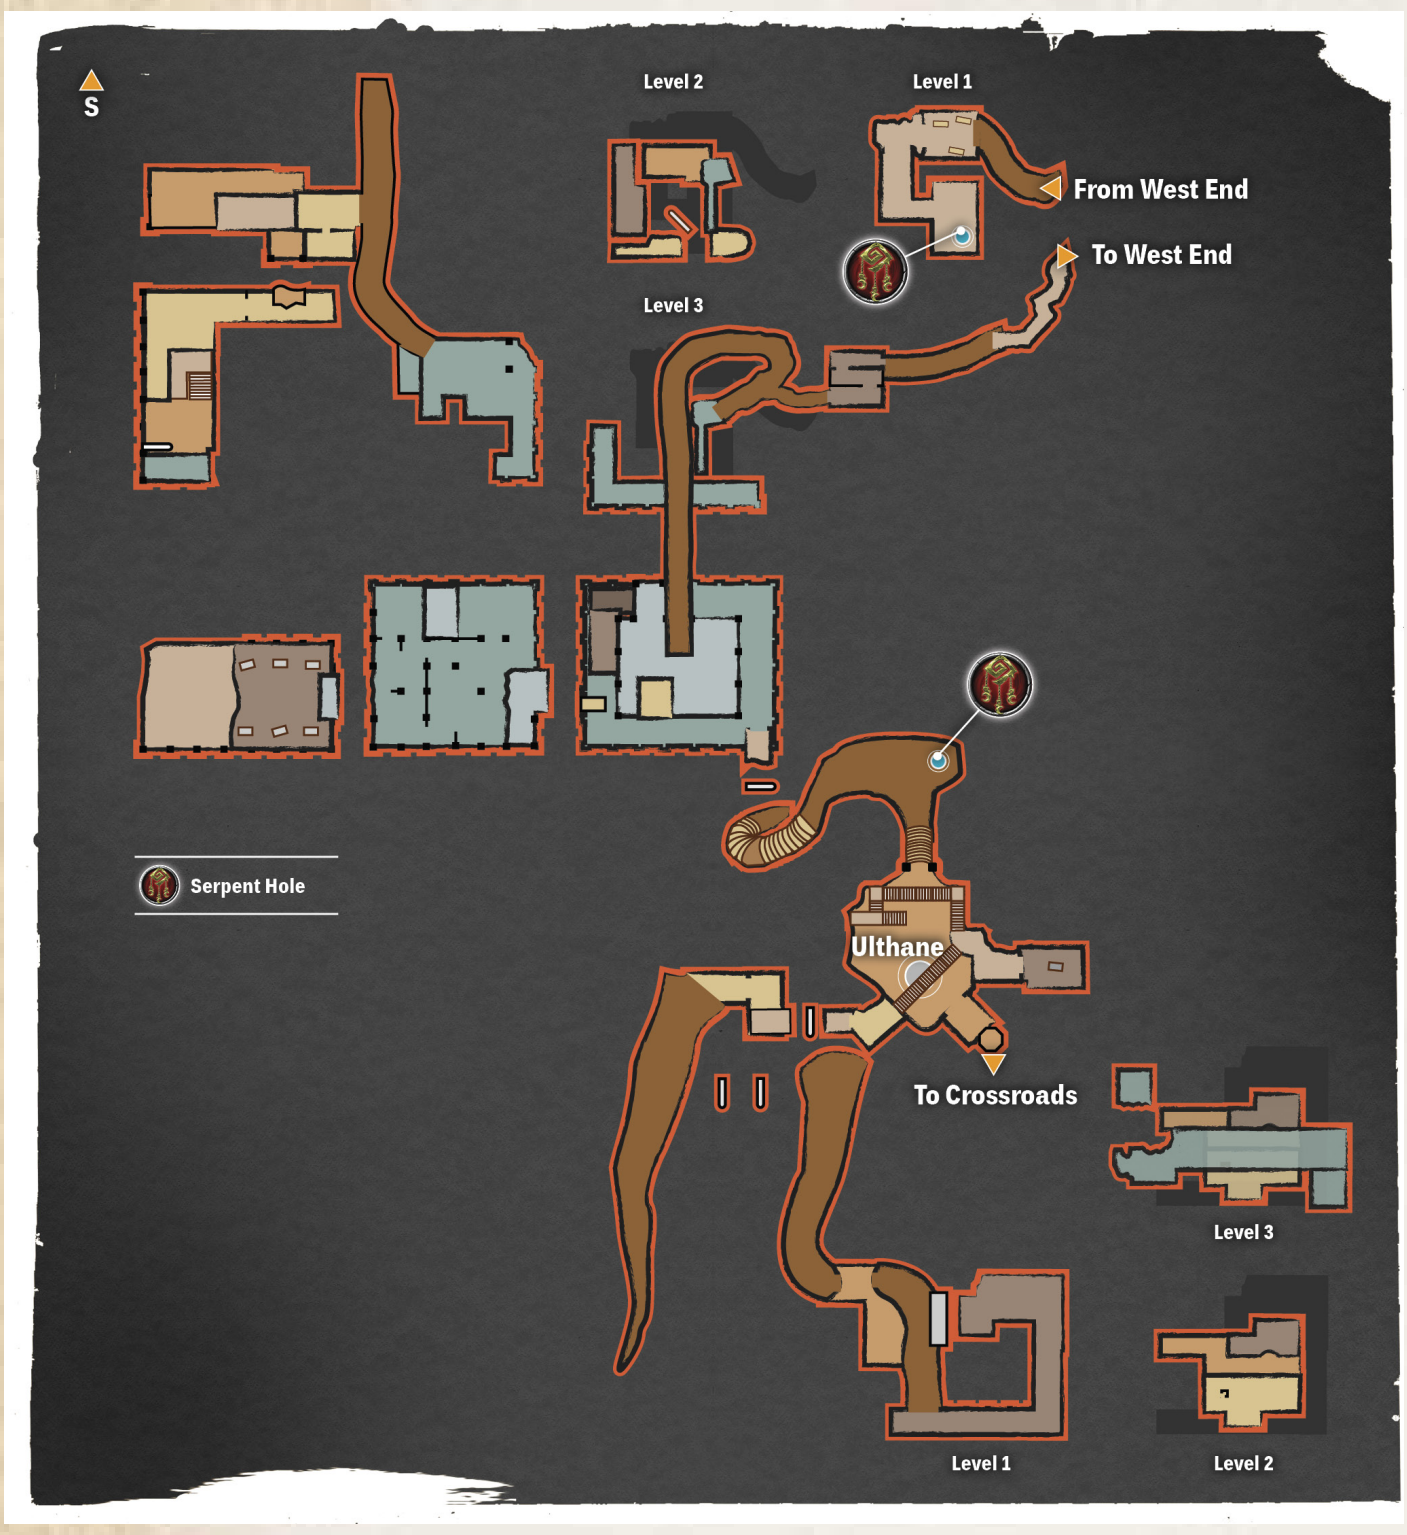

➤ UPGRADES NOT ITEMS

Resist the temptation to barter for consumables. Those Souls you harvest are much better spent leveling up or saving for the Unfocused Leviathan enhancement. And since the prices on consumables increase with every purchase, it's best to leave them low until you truly need them.

Wrath

Haven: Skyscraper

LOCATE THE MAKER, ULTHANE

Scour the crumbling building for items as you ascend to the upper roots of the Maker Tree. Whip swing across to the far level, step out onto the tree branch, and use a Ripcord attack to yank the Green Sycophant toward you. This attack is great for dealing with lone enemies on narrow walkways, as is the Flip Saw.

Cross the root to the building ahead, double-jump onto the walkway to the left, and climb to the upper level, where a lone Red Sycophant and a Soul Swarm are located. Grab the Large Lurcher Clump, harvest the Souls, then surprise the enemy with a leaping Razor Onslaught.

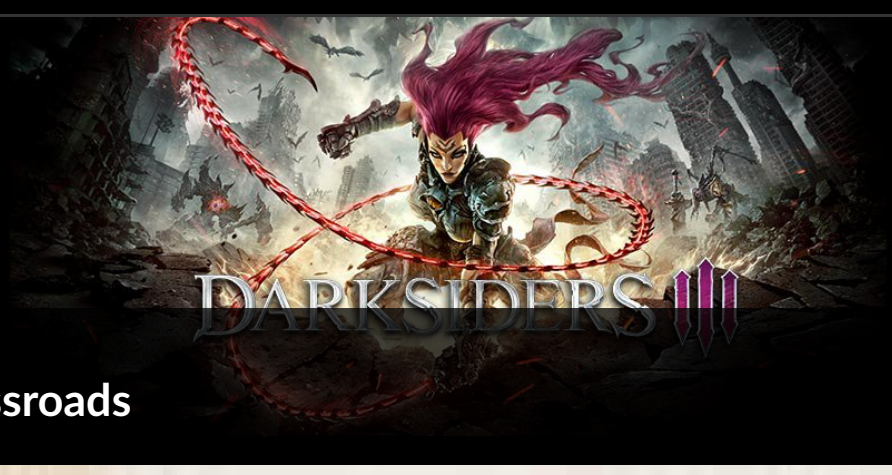

Slash the Soul Swarm and harvest the hundreds of Souls within.

Swing across to the Maker Tree and ascend the stairs to the next Serpent Hole. Purchase another upgrade from Vulgrim, then head inside to meet Ulthane and the humans he's protecting. Ulthane Blackheart offers to help Fury by providing upgrades to her weapons and enhancements in exchange for saving any humans she encounters along the way. Ulthane not only provides Fury with the **Gateway Stone** but lets her know that Wrath lies in the Nether, beneath the city.

SAVING HUMANS

The Gateway Stone (aka Bridge Stone) Ulthane gives to Fury can instantly send any humans encountered back to Maker's Forge, where they will be safe. While Fury may not understand how this benefits her, we're here to tell you that Ulthane has a special gift (with upgrades!) for her when she sends some back. The Rider's Mercy item will make accumulating Wrath and Souls much easier, so do tend to the feeble little humans, won't you?

Wrath

Haven: Crossroads

SEEK A WAY UNDERGROUND

Board the lift to the left of Ulthane and descend to the Crossroads at the base of the Maker Tree. The car-strewn area below contains a number of items and enemies. Collect the **Angelic Artifact** by the concrete barrier on the left. You'll need a second to upgrade a weapon enhancement, but these are among the most valuable crafting materials you can find. Your first chance to acquire the other main crafting ingredient—Adamantine—is off to the left. You'll need two Slivers of Adamantine for your first upgrade.

Circle around the area in a clockwise direction, noting the storm wind atop the pillar and the ghostly, chilled-looking chimney beyond it. You'll need to return later with advanced abilities to explore the plateaus above them. Be extra careful atop the hill beyond the candle-lit altar—a Suffering leaps into battle as you approach the item near the purple-glowing coral.

Be careful not to draw any other enemies into your battle against the Suffering.

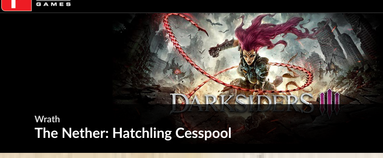

➤ DELAYED DANGER

The Black Sycophant in the far right-hand corner may not look that different, but it poses a much bigger threat. Not only is he quite fast and capable of combination attacks, but the delay in his charged, right-hand club attack makes dodging it quite difficult. Be patient. Better still, trigger Havoc Form!

Complete a tour of the area, then approach the bus across the clearing from the lift. Collect the Wrath Shard and drop through the hole to the sewer below. Here, Fury will use the Gateway Stone to rescue the **Human** cowering in the corner. Crawl through the ventilation shaft to enter the maintenance tunnels.

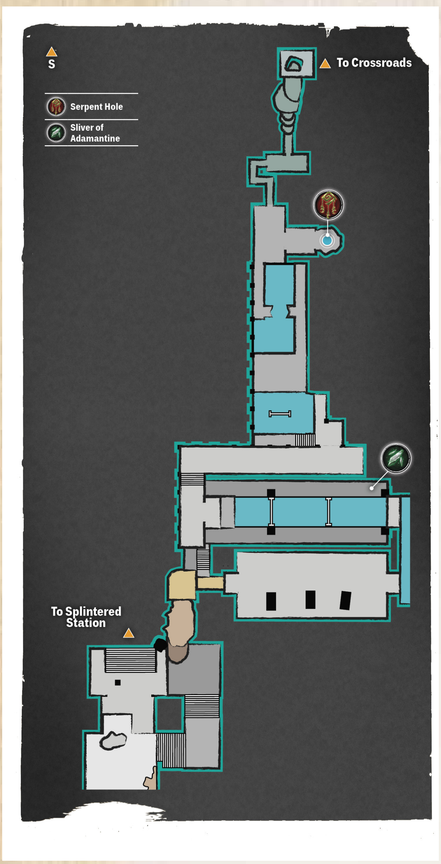

This hole leads to your first human encounter—and the entrance to the Nether.

Wrath

The Nether: Hatchling Cesspool

INTO THE SUBWAY SYSTEM

Leap across the broken walkway to the eggs and beat back the Chain Spider that attacks. Spot the Sloth Bug on the ground below and hit it with the Gravel Grinder attack. Sloth Bugs broadcast their pincer attack with a grunt, so time your dodge for their attack. They are harmless from afar, unlike the Chain Spiders, which hatch from their eggs with an aggressive pounce. Fortunately, neither of these creatures poses much threat. The Mosquito on the wall won't likely bother you unless you antagonize it.

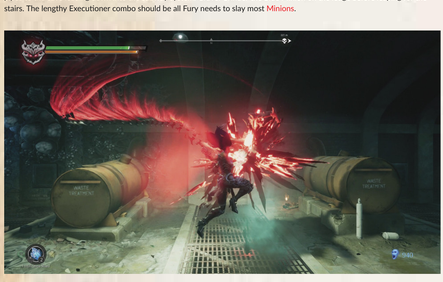

Nothing like a Gravel Grinder for dealing with unsuspecting enemies.

Swing across the cesspool via the pipe and continue to the larger room ahead. You'll need to whip swing across the length of the trench via the pipes with the chains, but first eliminate the three Sloth Bugs below and collect the Sliver of Adamantine.

➤ HAVOC FORM READY?

Fury's Havoc Meter should be full at this point. When triggered, Fury's Havoc Form grants her tremendous power and temporary invincibility. Though Havoc Form can be cancelled, the meter is slow to recharge and should only be used when essential.

The room with the waste treatment tanks contains multiple Sloth Bugs along with two leaping Red Minions and several Chain Spiders, so advance slowly. Unleash a Wrath Attack if necessary, but refrain from using Fury's Havoc Form for now. Follow the pipes to the cave leading down into the subway system. Gravel Grinder the Blue Minion on the ledge before leaping for the stairs. The lengthy Executioner combo should be all Fury needs to slay most Minions.

Arcane Counters are great for dispatching an isolated Red Minion.

At first glance, there appears to be no way out of the web-draped subway terminal. Fortunately, the insect that scurries out of the hive becomes flammable after ingesting the Bomb Bug bait that fell from the ceiling. Wait for the insect to glow red, then attack it. Back away before it explodes, igniting the webbing. There's another way to deal with these insects in a more controlled manner, but for now drop through the hole.

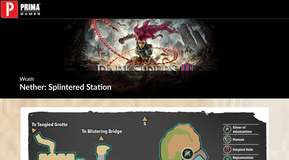

Wait for it to eat the rancid meat, then detonate it to burn the webs.

Watch as a massive spider-like creature clambers along the ceiling, then approach the steps (you can't reach the pickup atop the walkway just yet). Top off your Health and consume a Fortification Shard before descending toward the Minions. Be careful not to advance too far, as two more lurk in this area. Maintain an aggressive approach and don't let a Blue Minion call for support—attack it as soon as its claws glow red. It's easy to get overwhelmed if reinforcements arrive, so don't hesitate to trigger Fury's Havoc Form if this occurs. Just make sure to cancel Havoc Form as soon as the threat is eliminated.

SLOTH RESTS OUT OF REACH

The creature you see slouching atop the throne across the chasm is Sloth, one of the Seven Deadly Sins. Though near at hand, Sloth is out of reach for now. But his time will come...

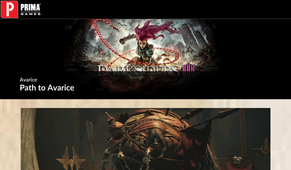

Head left along the edge of the canyon to the next Serpent Hole. You should have enough Souls to upgrade to level 5 without shattering many Lurcher Crystals. So long as the game isn't proving too challenging thus far, it's wise to save your Lurcher Crystals until you can afford the Unfocused Leviathan (5,000 Souls).

Path to Avarice

The Lord of the Hollows has decided to back Fury's play to bring the Seven Deadly Sins under control, even as he warns of the Charred Council being corrupt. As Angels and Demons willingly give themselves over to him, he in turn has handed the Flame Hollow to Fury. Though her powers continue to grow in tandem with her number of supporters, so too grows the difficulty of her task—and number of targets. The Lord of the Hollows has asked her to bring him the soul of Abraxis.

Fury's Path

Master the powers of the Flame Hollow.

Fight your way across the Blistering Bridge.

Eliminate the Flame Warden (optional).

Raise the drawbridge.

Find the missing sword.

Complete the sword trio and return to the Nether.

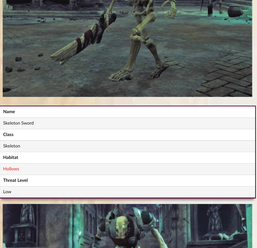

Navigate the grotto.

Visit the museum's dinosaur exhibit.

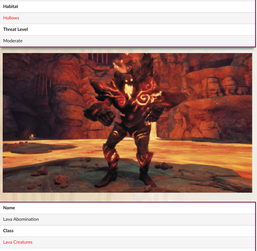

Defeat Avarice in the Atrium of Greed.

The Talisman of Sin glows with the presence of nearby targets. Fury is free to take them on in any order, but we recommend pursuing Avarice next, marked by the orange indicator on the compass. Doing so will lead Fury through the Catacombs, home to countless Skeletons, many of whom can block her whip-based attacks. Use Scorn in its Chain form, granted by the Flame Hollow, to break through their defenses. The Skeleton tomb may not be too intimidating, but don't lower your guard. This area is also home to the Flame Warden, the first of several "Chosen" that Fury will encounter. Have a Havoc Shard or Undying Shard on hand before taking him on.

It is possible to gain a wealth of upgrades while traversing the Hollows and the Nether en route to Avarice's lair in the Atrium of Greed. So many captured Souls provide the bounty needed to achieve level 13 before fighting Avarice, but the power of will can only go so far. Ultihana's gifts will be needed too. Seek the Slivers of Adamantine and Demonic Artifacts and use them to upgrade Scorn's various forms. Do not fail to locate the Invigoration Core, making it possible to carry three Nephilim's Remains.

Avarice

Hollows: Lord of the Hollows' Chamber

LEARNING THE FLAME HOLLOW

The Lord of the Hollows has bestowed upon Fury the Flame Hollow. This first of multiple elemental powers imbues Fury with fire and grants her the Chains of Scorn weapon, as well as several other unique abilities. Each of these abilities will be discussed as Fury works to exit the chamber she has been summoned to. First, descend the ramp opposite the stairs leading to the red webbing and locate the Serpent Hole within the chamber. Feed Vulgrim enough Souls to purchase an additional level.

Perform a Chimera's Roar with the Flame Hollow to burn through any cobwebs.

Charge the Flame Hollow to unleash a mighty burst of fire that burns through the webbing—no insects needed! The Flame Hollow also grants Fury immunity from extreme heat. Wade through the lava, then Flame Jump to the upper ledge by holding the Jump button after leaping into the air. Follow the river of lava in both directions to find two items and then step on the panel to reveal a rotating alcove.

Fury is immune to extreme heat when the Flame Hollow is active.

SEEK THE CRYPT BEYOND THE BRIDGE

Purchase an Undying Shard from Vulgrim, as it could prove essential in an upcoming battle. Smash the pottery for other items and then strike the lone sword on the altar to cause the gate leading to the Blistering Bridge to rise.

Skeletons prowl the bridge and come in many forms and sizes. Most are brittle fodder, while those wielding broadswords and armor can prove lethal, especially in large numbers. Advance slowly to avoid drawing the Armored Skeleton into the fray before thinning the shambling herd. Briefly trigger Havoc Form if necessary to cut through the dozen Skeletons on the bridge, then put the Chains of Scorn to use against the stragglers.

Don't hesitate to use Havoc Form, even if only for a few seconds.

➤ BREAK THEIR DEFENSE

Mix in Flicker attacks with the Chains of Scorn to break through enemy defenses. Foes that block the Barbs of Scorn are often susceptible to the quick-hitting Flicker attack.

Prev/Up:
Hollows: Blistering Bridge

Drop off the right-hand side at the end of the stone path to find the first **Demonic Artifact** along the lava river below. Beware that two Lava Abominations will rise from the lava as you grab the artifact. Focus your attacks on one while you watch for the other's projectile attacks. Flame Jump over the pit to escape.

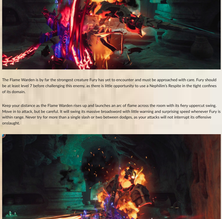

Aim to vep on solid ground so Fury can more easily dodge their lava bombs.

While raising across the fiery trench beyond the winding path, crush the Skeletons on the far side, and top off your health. A Lava Brute guards the entrance to the crypt and he's nobody to be trifled with. Dodge his early swings while keeping your distance and wait until the massive axe gets stuck in the ground—then go on the offensive! Activate the Flame Hollow's *Immolation* attack to engulf Fury in a burst of flame—perfect for inflicting fire damage even while using the Blaths of Scorn. The beast explodes upon death, so back away the instant you spot the Lurchers escaping.

Instantlevee it pays to fight fire with fire.

Flame Jump into the pit and strike the sword above the gate, then ascend the stairs to the crypt. Focus on the Skeleton Sword and Archer as the crumbled stairs to shatter in the process. Hit it with lengthy combos with the Barbs of Scorn and then mix in some attacks with the Claws of Scorn. Collect the **Invigoration Core** from the alcove and rejoice in the ability to carry a third Nephilim Respite.

Don't leave this room without the Invigoration Core atop the steps.

Dodge the arrow from the Skeleton Archer atop the stone stairs and approach the next room slowly. Ignore the worshipping Gravlurs until you've first eliminated the Skeleton Archer on the ledge to the right. Jump up and hit him with a Gravel Gervlin.

DEFEAT THE FLAME WARDEN

The sword in the center of the room controls the gate opposite it, but don't open it just yet. There's a secret battle to be had for those wanting to challenge their first Chosen. The hallway to the left of the sword appears to be a dead-end, but the stone wall at the end is actually controlled by a hidden lever in an adjacent passageway.

Smash the pottery and crawl through the opening to a secret lever.

Ascend the steps beyond the door-controlling sword and smash the pottery on the left to reveal a hidden tunnel. Crawl through to reach a Shrine of Adamantine and the level-1 enrolling the hidden door in the prior hallway. Return the way you came, top off your Health and Wrath, and activate a Fortification Shard or Undying Shard as you climb the stairs.

Chosen: Flame Warden

The Flame Warden is by far the strongest creature Fury has yet to encounter and must be approached with care. Fury should be at least level 7 before challenging this enemy, as there is little opportunity to use a Nephilim's Respite in the tight confines of its domain.

Keep your distance as the Flame Warden rises up and launches an arc of flame across the room with its fiery uppercut swing. Move in to attack, but be careful. It will swing its massive broadsword with little warning and surprising speed whenever Fury is within range. Never try for more than a single dash or two between dodges, as your attacks will not interrupt its offensive onslaught.

Save your Arcane Counters until after the uppercut sweep attack.

There won't always be time for an Arcane Counter between its attacks, especially following its charged-up overhand right attack, as it quickly follows it with a backhand slash. There's more time to perform an Arcane Counter following its uppercut swings. Don't hesitate to activate Heroic Form if Fury's health falls below the halfway mark. Remain vigilant until the Flame Warden drops to its first portal. Rise activate Heroic Form (or try to consume a Nephilim's Respite). Once in Heroic Form, maintain the pressure, but watch the Heroic Meter closely as you don't want to be caught vulnerable to an attack when you least expect it. Collect the **Angelic Artifact** and **Essence of a Chosen** and return the way you came.

Trigger Heroic Form as the Flame Warden teleports away...

...then let the Chosen have it!

RAISE THE DRAWBRIDGE

The drawbridge near the lava is controlled by the two swords flanking it. Striking the swords is easy, but they must be struck nearly simultaneously in order for them to activate. Individually, the swords will glow yellow when struck, but the only way to turn them red—and thereby raise the bridge—is to hit them both within a second of one another.

Since they are too far apart to run between them in time, Fury must use the lengthy array of rod sidewalks to spark the sword on the left-hand side while she rushes to hit the one on the right. With your back to the bridge, stand atop the broken column and Flame Jump toward the webbing above the stone carving. This will ignite the webbing, causing it to burn toward the sword. Dash across the lava and strike the other sword as soon as the fire reaches the first one.

Flame Jump to ignite the upper cobwebs...

...then dash across the lava.

OPEN THE TWO-SWORD GATE

One of the angel statues ahead is missing its sword, and there's no way to open the gate atop the stairs without first finding it. Begin by eliminating the Skeleton to the left of the gate, leap across the gap, and arrive on the ledge on the left. It's best to kill the Skeleton Archer near the window before grabbing the pickup on the crumbling stairs outside. Crawl through the tunnel to the cathedral-like room beyond.

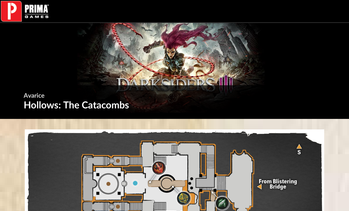

Stay on the move to dodge the arrows and close on the archers.

This multi-story room houses a wealth of varcophagi, many of which contain a Lurcher Crystal, consumable, or crafting ingredient. You'll want to Flame Jump from ledge to ledge to gather them all, but first clear out the Skeletons on the ground and Skeleton Archers on the balconies. Leave the latter for last and stay on the move as you deal with the ground forces. The Skeleton Archers will fire arrows at Fury from the balconies above, so be prepared to entereta as you try to line up jumps. Fight your way across the room to the Skeleton Archer atop nearest the cascading lava.

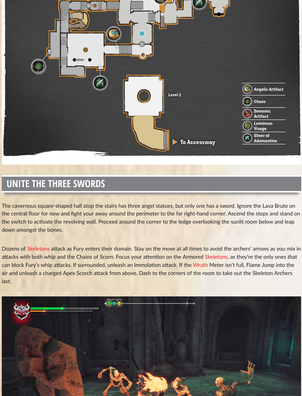

Use a Flame Jump to climb onto one of the altars and then crisscross the room from ledge to ledge by double-jumping into a Flame Jump. To reach the lower ledges, allow Fury to fall a bit before initiating the Flame Jump. Similarly, she can drop from one ledge and grab hold of the one below it. Don't miss the **Demonic Artifact** on the uppermost ledge across from where you entered! (he one with the red glow).

Flame Jump from balcony to balcony to collect the many items.

When ready to leave, drop through the hole in the floor to the lava below. Follow the cave to the room with the Serpent Hole and Waglyth. Strike the sword to open the gate, then pick it up after it fails. Place the sword on the angel statue near the stairs, then quickly strike both swords to raise the next gate.

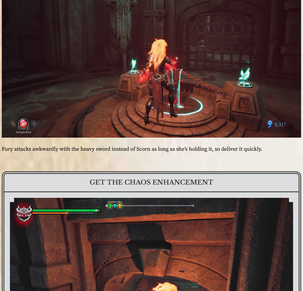

Avarice
Hollows: The Catacombs

UNITE THE THREE SWORDS

The cavernous square-shaped hall atop the stairs has three angel statues, but only one has a sword. Ignore the Lava Brute on the central floor for now and fight your away around the perimeter to the far right-hand corner. Ascend the steps and stand on the switch to activate the revolving wall. Proceed around the corner to the ledge overlooking the sunlit room below and leap down amongst the bones.

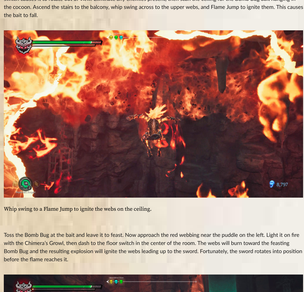

Dozens of Skeletons attack as Fury enters their domain. Stay on the move at all times to avoid the archers' arrows as you mix in attacks with both whip and the Chains of Scorn. Focus your attention on the Armored Skeletons, as they're the only ones that can block Fury's whip attacks. If surrounded, unleash an Immolation attack. If the Wrath Meter isn't full, Flame Jump into the air and unleash a charged Apex Scorch attack from above. Dash to the corners of the room to take out the Skeleton Archers last.

Unarmored Skeletons pose little threat by themselves, but don't let them surround you!

Smash the sarcophagi in the alcoves around the perimeter to find numerous Lurcher Clumps as well as an Undying Shard, a **Demonic Artifact**, and a Sliver of Adamantine. When ready to leave, stand atop the panel in the center of the room and wait for the slow-moving alcove to rotate into view. Dash forward to slip inside before it closes. Grab the sword from its chains, then Flame Jump and strike the sword above the gate to exit. Climb the stairs on either side and return the sword to an angel statue.

Now it's time to get the second sword. Head left from the angel statues and ascend the stairs in the far left-hand corner of the large room. Use the floor switch to enter the passage beyond the revolving wall.

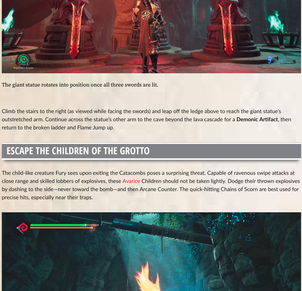

Fury attacks awkwardly with the heavy sword instead of Scorn as long as she's holding it, so deliver it quickly.

GET THE CHAOS ENHANCEMENT

Follow the path around to the left, past the worshipping Skeleton, to the stairs, but don't descend! Instead, smash the pottery on the left to reveal a secret cave. Flame Jump to the upper ledge and then drop down to the sun-lit pit near the waterfall. Defeat the Skeleton in the crypt at the base of the stairs to obtain the valuable **Chaos enhancement**. Socket it into the Barbs of Scorn if you haven't begun upgrading the Fortifier enhancement. Otherwise save it for your next weapon (we recommend keeping the Leviathan enhancement with the Chains of Scorn). Return the way you came.

Locating the prior sword tested your combat skills. This one tests your puzzle-solving abilities. The floor switch controls a revolving wall high above the gate, where a sword is mounted. You must strike the sword to open the gate, but stepping off the switch causes it to rotate out of view. Eliminate any enemies present, then scan the ceiling for the Bomb Bug bait hanging in the cocoon. Ascend the stairs to the balcony, whip swing across to the upper webs, and Flame Jump to ignite them. This causes the bait to fall.

Whip swing to a Flame Jump to ignite the webs on the ceiling.

Toss the Bomb Bug at the bait and leave it to feast. Now approach the red webbing near the puddle on the left. Light it on fire with the Chimera's Gread, then dash to the floor switch in the center of the room. The webs will burn toward the feasting Bomb Bug and the resulting explosion will ignite the webs leading up to the sword. Fortunately, the sword rotates into position before the flame reaches it.

Stand on the switch while the fire spreads to the sword.

Collect the **Angelic Artifact** behind the corpse near the stairs in the next hallway, then burn the cobwebs to reveal another floor switch. Wait for the revolving alcove to slam into position behind Fury, then dash toward it. Retrieve the sword, open the gate, and return the sword to the statues as before.

Don't miss the Incandescent Remains on the floor near the stone column.

Before you activate the three swords with a Chain Cycle spin attack, take a minute to defeat the Lava Brute below. Trigger Havoc Form to make quick work of him (he'll drop a Havoc Shard) and grab the **Incandescent Remains** (+1 Attribute Point) near the base of the giant statue. Scour the area for Lurcher Clumps, then strike the swords to activate the giant statue leading out of the Catacombs.

The giant statue rotates into position once all three swords are lit.

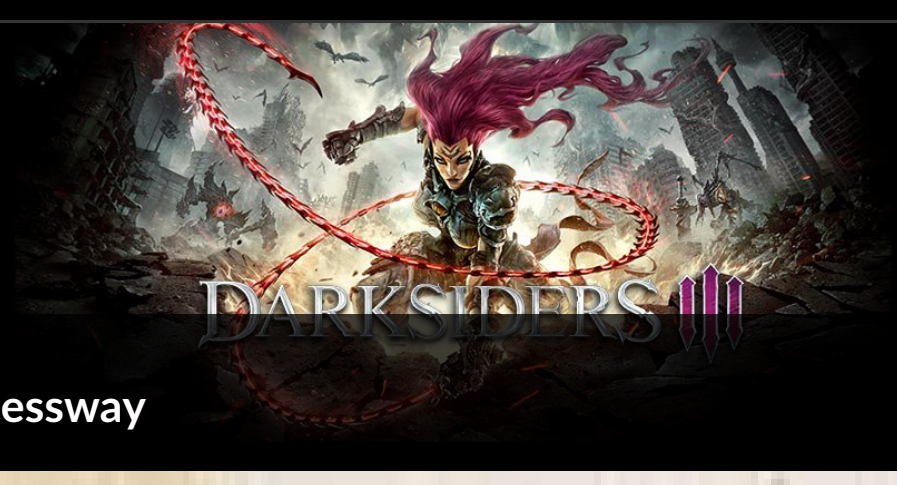

Climb the stairs to the right (as viewed while facing the swords) and leap off the ledge above to reach the giant statue's outstretched arm. Continue across the statue's other arm to the cave beyond the lava cascade for a **Demonic Artifact**, then return to the broken ladder and Flame Jump up.

ESCAPE THE CHILDREN OF THE GROTTO

The child-like creature Fury sees upon exiting the Catacombs poses a surprising threat. Capable of ravenous swipe attacks at close range and skilled lobbers of explosives, these Avarice Children should not be taken lightly. Dodge their thrown explosives by dashing to the side—never toward the bomb—and then Arcane Counter. The quick-hitting Chains of Scorn are best used for precise hits, especially near liftier traps.

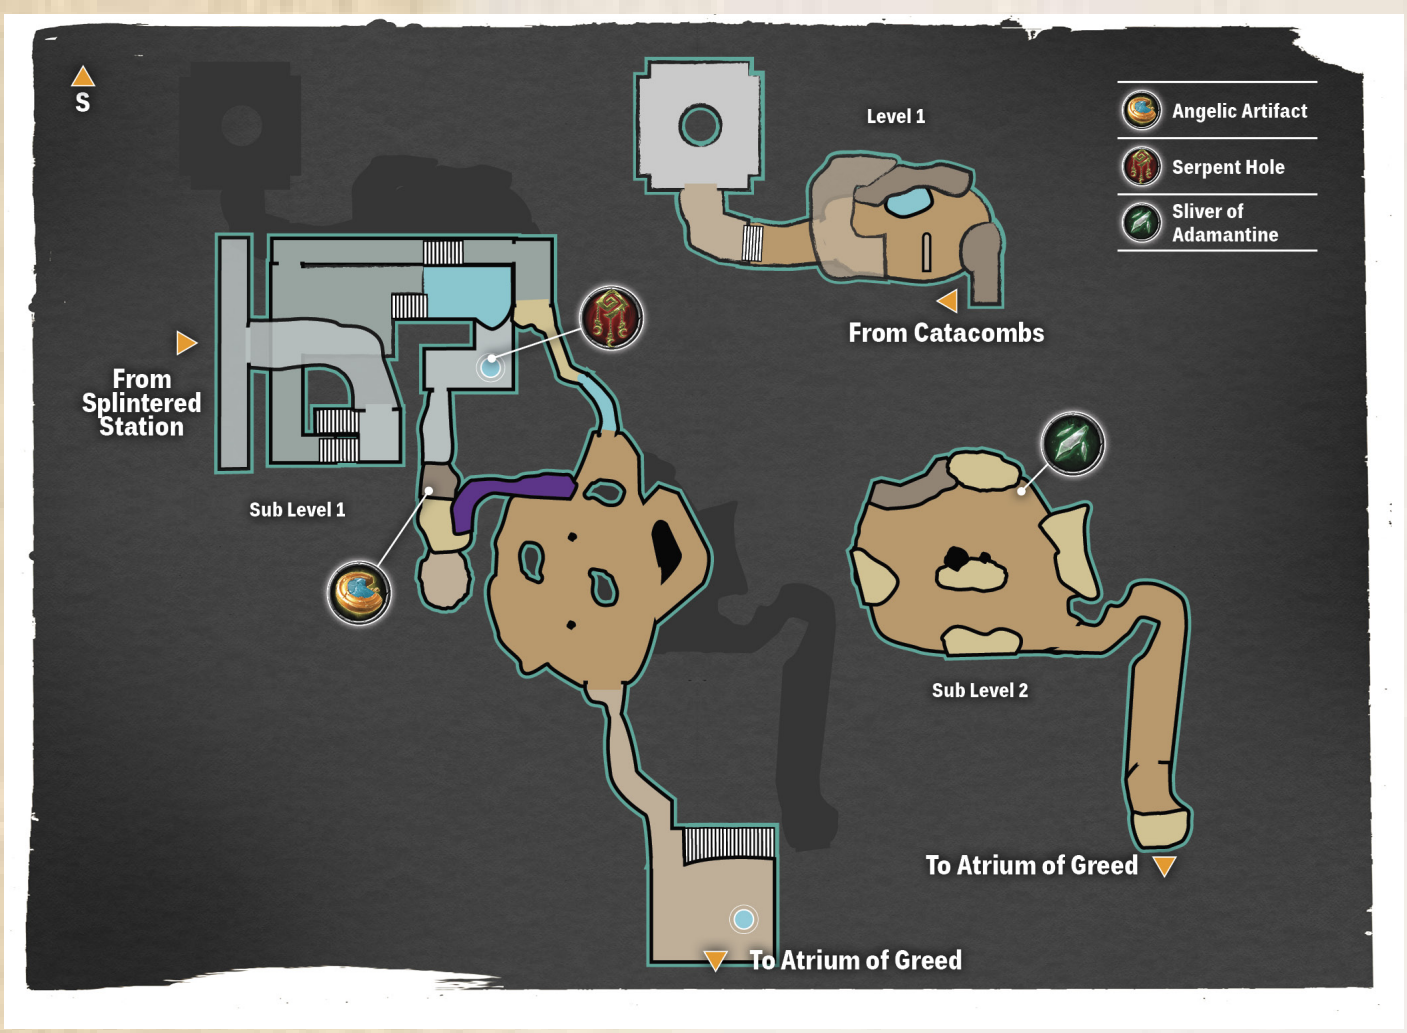

Whip swing back and forth from this pipe to exit.

Flame Jump up the cliffs, then turn and spot the pipe overhead. Flame Jump into a whip swing to reach the ledge across the grotto. Now turn around and double-jump back toward the pipe. Whip swing into a Flame Jump to grab hold of the ledge leading back to the maintenance tunnels beneath the city.

Avarice

Nether: Accessway

Visit the Museum's Dinosaur Exhibit

Purchase as many Attribute Points as you can from Vulgrim and exit through the doors beside him. Ignore the Avarice Children on the ledge ahead, near the glowing pickup—you can't reach them yet—and drop to the lower floor. Fury must use her double-jump and Flame Jump abilities to navigate a fractured path through the adjacent cave in order to reach the museum where the next Deadly Sin resides. Numerous Avarice Children in an upper, out-of-sight cave lob bombs through the holes in the ceiling. You can't reach them from here, so keep moving to stay alive.

➤ EXPLOSIVE POCKMARKS

The blackened craters on the ledges show where the Avarice Children aim their bombs. Sidestep these scorch marks for safety.

Leap across to the left and then turn and leap for the lengthy platform near the stalactites in the center. Cross to the rocks near the pickup, then loop back along the cave wall in a counterclockwise direction. An Avarice Child guards the exit tunnel. Wait for it to toss a bomb before you try leaping toward it—otherwise you're likely to get knocked from the air.

The best time to leap to a ledge is right after a bomb detonates on it.

Ascend the hill, ignoring the Avarice Child for a moment while you inspect the explosive-rigged tripwire in front of the pickup. The Avarice Children have strung dozens of these traps throughout the upcoming cave and museum. Be extra careful when dodging or using your whip, as these traps pack quite a punch.

The floor of the museum's dinosaur exhibit is littered with explosive tripwires.

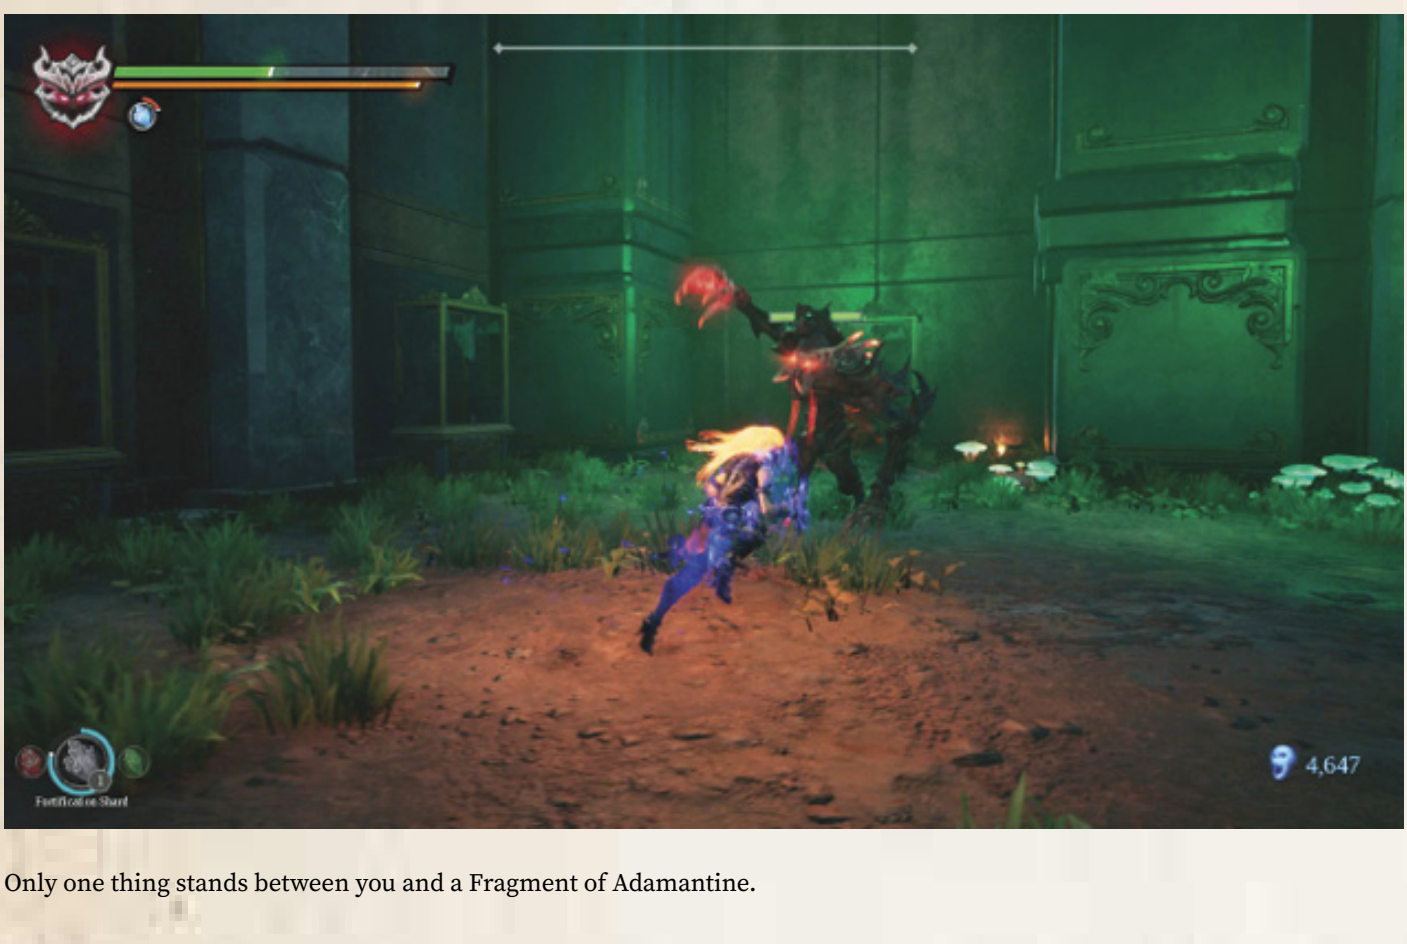

Try as you might, you won't flush the Avarice Children into the traps they've set, but they will certainly try to lure you into them. Snake back and forth across the dinosaur exhibit as you gather up the collectibles while eliminating the threats within the room.

Ascend the grand staircase at the far end of the room and cut through the galleries to the balcony above. Set fire to the sprawling cobweb to free the second massive chandelier. Now Fury can Flame Jump from the stairs and whip swing to the scaffolding near the T-Rex.

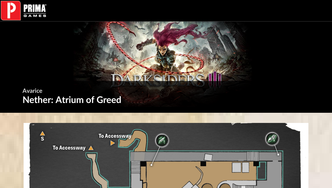

Swing across to the T-Rex, then double-back atop the chandeliers.

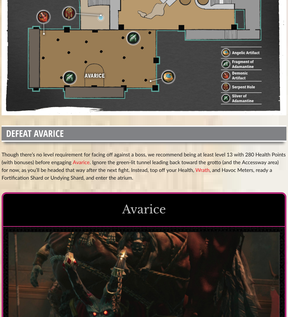

Pluck the pickup from atop the dinosaur's head and return to the scaffolding. Flame Jump onto the chandelier, leap across to the one nearest the stairs, then Flame Jump to the scaffolding near the left-hand balcony. Put the Fortification Shard found atop the scaffolding to use against the Black Minion in the gallery to the right. Keep your distance, listen for his charging claw swipe, and dodge to the side. Mind the tripwire at the base of the stairs and collect the Fragment of Adamantine from the corner. Follow the balcony to the other room and pay a visit to Vulgrim at the base of the stairs on the left, outside the Atrium of Greed.

Only one thing stands between you and a Fragment of Adamantine.

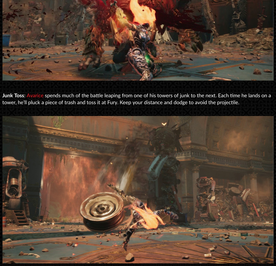

Avarice
Nether: Atrium of Greed

DEFEAT AVARICE

Though there's no level requirement for facing off against a boss, we recommend being at least level 12 with 280 Health Points (with bonuses) before engaging Avarice. Ignore the green-lit tunnel leading back toward the grotto (and the Accessoway area) for now; as you'll be headed that way after the next fight. Instead, top off your Health, Wrath, and Havoc Meters, ready a Fortification Shard or Undying Shard, and enter the atrium.

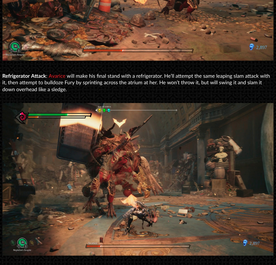

Avarice

Leaping Ground Pound: Avarice leaps high into the air, crossing the room in a single bound, and punches the ground with terrific force. Immediately dodge and hit him with a Volcanic Charge or Phoenix Rising. He'll attempt this attack from the ground or atop a tower.

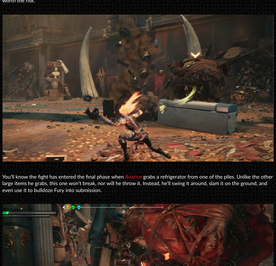

Junk Toss: Avarice spends much of the battle leaping from one of his towers of junk to the next. Each time he lands on a tower, he'll pluck a piece of trash and toss it at Fury. Keep your distance and dodge to avoid the projectile.

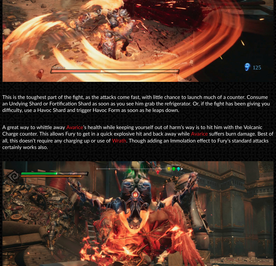

Swipe Attacks: Avarice isn't without melee abilities. Beware his left and right swipe attacks. Though his right-hand attack can be tough to spot, he'll raise his left arm high in the air before attacking with that hand. Hit him with Burning Cross Slash combos, then dodge.

Bathtub and Clock Attacks: He'll pick a bathtub or grandfather clock (or even a fossil head) from a pile of junk after receiving moderate damage and use it to perform a leaping overhead slam attack. He'll then swing the item around him, extending his reach, and eventually throw it. Back away at once!

Refrigerator Attack: Avarice will make his final stand with a refrigerator. He'll attempt the same leaping slam attack with it, then attempt to bulldoze Fury by sprinting across the atrium at her. He won't throw it, but will swing it and slam it down overhead like a sledge.

Avarice is surprisingly fast given the massive bundle of loot tied to his back. He initiates the fight by leaping toward Fury with a ground pound attack. This is a simple attack to dodge, provided you don't evade in the direction from which he's coming, as his enormous bundle of loot will hit Fury if you do. Instead, dodge to the side, counter, and then back away.

Avarice mixes up attacks in quick succession and you never want to imitate his greed. At close range, Avarice attacks with his claw-like hands, swinging usually from the left and then the right. Dodge backward, dodge again, then counter, and be careful not to get pinned against the wall or one of his towers of junk. If this happens, try to Flame Jump out of reach.

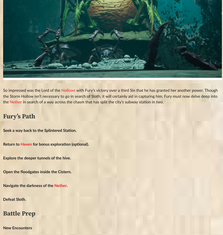

The towers scattered throughout the atrium aren't just for show. Avarice frequently leaps from one to the other, keeping his distance and throwing pieces of junk at Fury. Small pieces of debris are easy to dodge. Keep your distance so you can see them coming, cartwheel aside, and bide your time. This is a good opportunity to consume an item, so long as you keep your eyes on him.

Sloth

Path to Sloth

So impressed was the Lord of the Hollows with Fury's victory over a third Sin that he has granted her another power. Through the Storm Hollow he'll necessary to go in search of Sloth. It will certainly aid in capturing him. Fury must now delve deep into the Nether in search of a way across the chasm that has split the city's subway station in two.

Fury's Path

Seek a way back to the Splintered Station.

Return to Haven for bonus exploration (optional).

Explore the deeper tunnels of the Nine.

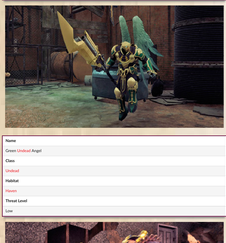

Open the floodgates inside the Cistern.

Navigate the darkness of the Nether.

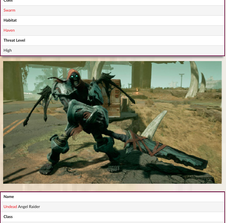

Defeat Sloth.

Fury will fight numerous insect-like creatures in her effort to find Sloth, including a few she hasn't seen before. Despite having planted the Storm Hollow, it's best to keep the Flame Hollow active most of the time, especially if you have equipped the Chains of Scorn with the Leviathan enhancement. Beware the many cocoons strewn about the path to Sloth, as they often contain a poison-spewing Mimic that can leap forth in a blink. The journey from the Atrium of Greed to Sloth's location isn't long, but the narrow tunnels and terrifying darkness warrant focus.

As for upgrades and weapons, there is ample opportunity for bonus exploration in both Haven and the Nether. Diligent players will be well rewarded with bundles of Souls and plenty of crafting ingredients, as well as two high-powered weapon-specific powers. Add the Chaos enhancement to the Lance of Scorn and upgrade the two alternative weapons as possible, while keeping the Chains of Scorn primitive for the Barbs of Scorn. In addition to numerous crafting ingredients, be sure to save any Humans spotted out in this section, as doing so will earn a reward from Giftbane the next time you visit him.

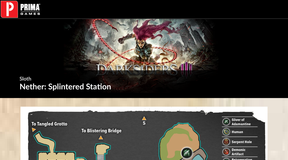

Save the Humans

3. Use the Flame Hollow to burn through the cobweb across the suspension bridge in Maker's Forge and follow the tree root to the office building.

4. From the building across from the Maker Tree in Skyscraper, use the Storm Hollow to reach the offices off to the right. Ride the series of Storm Currents to the red building guarded by Swamp Swarms and break down the barrier on the upper floor.

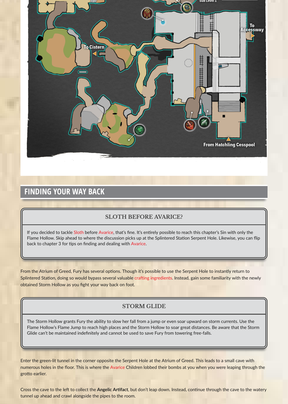

5. Ascend the stairs beside the Cistern Serpent Hole and smash the cocoons to find the next Human.

6. Run along the top of the subway car beyond the Tangled Grotto Serpent Hole to find this Human hiding out.

Sloth

Nether: Splintered Station

FINDING YOUR WAY BACK

SLOTH BEFORE AVARICE?

If you decided to tackle Sloth before Avarice, that's fine. It's entirely possible to reach this chapter's Sin with only the Flame Hollow. Skip ahead to where the discussion picks up at the Splintered Station Serpent Hole. Likewise, you can flip back to chapter 3 for tips on finding and dealing with Avarice.

From the Atrium of Greed, Fury has several options. Though it's possible to use the Serpent Hole to instantly return to Splintered Station, doing so would bypass several valuable crafting ingredients. Instead, gain some familiarity with the newly obtained Storm Hollow as you fight your way back on foot.

STORM GLIDE

The Storm Hollow grants Fury the ability to slow her fall from a jump or even soar upward on storm currents. Use the Flame Hollow's Flame Jump to reach high places and the Storm Hollow to soar great distances. Be aware that the Storm Glide can't be maintained indefinitely and cannot be used to save Fury from towering free-falls.

Enter the green-lit tunnel in the corner opposite the Serpent Hole at the Atrium of Greed. This leads to a small cave with numerous holes in the floor. This is where the Avarice Children lobbed their bombs at you when you were leaping through the profile earlier.

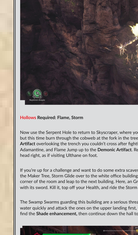

Cross the cave to the left to collect the **Angelic Artifact**, but don't leap down. Instead, continue through the cave to the watery tunnel up ahead and crawl alongside the pipes to the room.

Pull the handle on the electrical switch to raise the two metal doors, and pay Vulgrim a visit to the left to reset your save point location to the Accessway. Now return to the switch and proceed through the door on the right.

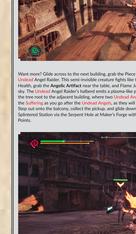

Visit Vulgrim through the door on the left before heading right.

Ascend past the eggs to the upper level of the subway station you first entered some time ago. Test out the Lance of Scorn on the Minions in this area and fight your way to the **Demonic Artifact** in the cave to the far left, beyond the Black Minion. Drop down to pay Vulgrim a visit at the Splintered Station and return to the area beneath the overhead walkways—it's time to go someplace new.

The Black Minion on the upper level guards a Demonic Artifact in the nearby cave.

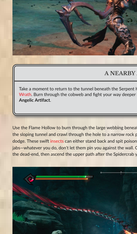

ADVANCED EXPLORATION: MAKER'S FORGE

Hollows **Required: Flame**

Return to Maker's Forge via the Serpent Hole and climb the ramps beside Ulthane. Swing across to the balcony, burn through the cobweb, and whip-swing to the adjacent tree nest. Fend off the White Sycophants and scour the office building in the distance to find a **Demonic Artifact** and a **Human**, among other items. Return the way you came.

ADVANCED EXPLORATION: SKYSCRAPER

Hollows **Required: Flame, Storm**

Now use the Serpent Hole to return to Skyscraper, where you first met Vulgrim. Ascend the building as you did earlier, but this time burn through the cobwebs at the fork in the tree nest. Proceed along this path until you reach the **Angelic Artifact** overlooking the trench you couldn't cross after fighting Envy. Use Storm Glide to reach the Piece of Adamantine, and Flame Jump up to the **Demonic Artifact**. Return through the tunnel to the fork in the tree nest and head right, as if visiting Ulthane on foot.

If you're up for a challenge and want to do some extra scavenging early on, keep reading. Rather than swinging across to the tree nest to the building, Flame Jump to the ledge on the left and enter the tree. Burn through the cobwebs in the corner of the room and leap to the next building. Here, an Green Undead Angel teleports around the room, attacking with its sword. Kill it, top off your Health, and ride the Storm Currents over to the red building in the distance.

The Swamp Swarms guarding this building are a serious threat. Their explosive projectiles pack a punch. Get out of the water quickly and attack the ones on the upper landing first, then worry about the ones below. Whip swing across to find the **Shade enhancement**, then continue down the hall to free a **Human**.

Want more? Glide across to the next building, grab the Piece of Adamantine, and ascend the ramp to the shimmering Undead Angel Raider. This semi-invisible creature fights like the White Sycophant when not teleporting. Top off your Health, grab the **Angelic Artifact** near the table, and Flame Jump up to the Undead Angel Raider and knock it from the sky. Use Storm Glide to reach the Piece of Adamantine on the roof of the building to the left, then Flame Jump back to the tree nest to the adjacent building, where two Undead Angels and a Suffering attack at close range. Keep away from the Suffering as you go after the Undead Angels, as they will continue to summon reinforcements until both are dead. Step out onto the balcony, collect the pickup, and glide down to the tree nest below, completing the loop. Return to Splintered Station via the Serpent Hole at Maker's Forge with enough Lurcher Crystals to buy four or more Attribute Points.

DEEPER INTO THE HIVE

A NEARBY ARTIFACT

Take a moment to return to the tunnel beneath the Serpent Hole, where you found a Human during your search for Wrath. Burn through the cobwebs and fight your way deeper into the cave, past the Mosquito and Spidercrab, to find an **Angelic Artifact**.

Use the Flame Hollow to burn through the large webbing beneath the overhead walkways, and leap right at the fork. Ascend the sloping tunnel and crawl through the hole to a narrow rock path. A Mimic lunges for Fury as she advances, so be ready to dodge. These swift Insects can either stand back and spit poison globules or dash forward and attack with a series of deadly jabs—whatever you do, don't let them pin you against the wall. Clear the Mosquito and Minion from the lower path en route to the dead-end, then ascend the upper path after the Spidercrab you saw upon entering the area.

Fend off enemies down low, then head up the path on the left.

THE UNREACHABLE ITEM

The pickup visible beyond the rock spires at the end of the lower path can't be reached just yet. Though it sits tantalizingly close, accessing it requires a lengthy trek through the Tangled Grotto with a Hollow Fury doesn't yet possess.

COCOONS OF DEATH

Many of the stone-like cocoons harbor a Mimic that attacks when broken open, though some are already dead. Strike the cocoons with the whip and then somersault away to avoid a surprise attack.

Pursue the Spidercrab toward the hive up ahead, but dodge to the side as soon as it charges forward. Its upward double-claw attack is near-instantaneous. Charge the Lance of Scorn to unleash a stunning spear attack that keeps the foe off-balance. Flame Jump to burn the cocoon hanging from the ceiling and then advance toward the purple-glowing coral.

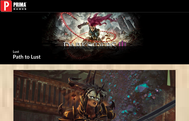

As with the cobwebs before you had the Flame Hollow, the only way through these coral-like rocks at this point is with the help of a Bomb Bug. Cut the oozing purple mass of ball from the suspended cocoon to the right of the rocks and fetch a Bomb Bug from the path on the left. Toss it at the bulk, wait for it to glow, and then hurl the Bomb Bug at the purple coral.

Feed the Bomb Bug the purple bait and then throw it at the glowing rocks.

Drop into the aquaducts and eliminate the Sloth Bugs on the near side of the flooded channel before venturing toward the Black Minion on the far side. Follow the water downstream toward the Cistern.

The Lust of the empires encountered in the Boundless war undead, resurrected gluttonshead burning little resemblance to their formal Angelic nature. Many of them wield mighty bloodswords, capable of emitting Acrylex power and bruising both Sycophants and Angels. The Undead Rocker is a particularly dangerous foe, as it can summon a Mad undead Angel Rocker to aid in the battle. The Mad undead will also hinder in a nightly cadence every bit of hyphins as it's ugly. The Undy Threat serves as a moving platform but will act fury in raising the numerous recrightened purple in the shipyards.

As fury gain additional undead enhancements, the need for artifacts increases. One useful thought to have you go about upgrading your Undead armaments, as it can be better to use those Elements and Angelic Artifacts to maximize a staple Undead Weapon rather than to upgrade a Weapon that you'll only use for a short time. Another thought to consider is your Undead Boss. The Fire Element is not found in this territory but will give you enough to start a Hybrid Upgrade from Ultimate, so be sure to seek them out. Thesmyal players who don't squander their Souls on Tangerine Legacy should reach level 40 prior to confronting Lust.

Save the Humans

1. Use Liberty Bug to blow up the parade tanks on the main street in North End, near the Sycophant casting room 4.5x.

2. Crawl through the tunnel within the trench opposite the Serpent Hole to North End to find this Human.

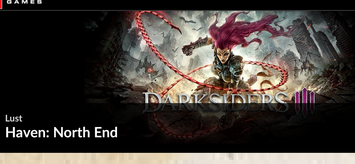

3. Lose over the containers in the alley near the Bomb Bug at Hunting Pen to reach the tank to destroy.

4) While racing across the plain Kiddie the Observed District warehouse and Flame Jump at the webbing on the right. Enter the tunnel to find Cinnamon.

5) Crawl through the vent next to the Mangled Freeway Serpent Hole to find the Human inside the next room.

Lust

Haven: North End

OUT OF THE COUNTRY...

Return to Maker's Forge and speak with Ulthane to upgrade your weapons and enhancements. Use either the lift or the Serpent Hole to descend to the Crossroads area of Haven. There will be time to explore the upper ledges of Haven later. For now, burn the cobweb near Vulgrim to access a yet-unvisited canyon.

SCALING DIFFICULTY

The Suffering off to the left may look like the one you fought when Fury was weaker, but he'll still put up a fight. The enemies encountered in each area grow stronger in proportion to Fury's ever-increasing power. Don't expect to cut through Haven's foes like a hot whip through butter. Even Sycophant fodder can prove deadly if you're not careful.

Collect the Lurcher Crystals and other items from this small canyon, then advance through the trench leading southwest, toward the massive tree trunks. Ascend the slope heading south to access the North End section of Haven. Vulgrim is on the left.

Walk along the cliffs to stay above the Sycophant, then hit them with Shock Therapy.

...AND INTO THE CITY

This corner of Haven is arguably the deadliest, but those who dare to explore its nooks and crannies will be well compensated for their efforts. From the Serpent Hole, head to the right along the upper ledge of the pit. Let sleeping Sufferings lie for now and hold nothing back against the Undead Angel Raider, Sycophant, and Minions that attack.

Circle around the pit in a counterclockwise direction to the ledge overlooking the pickup in the narrow corner, opposite the taxi. Consume a Wrath Shard if needed, then drop in and grab the **Demonic Artifact**. Immediately unleash the Twin Tempests attack, switch back to the Flame Hollow, and Flame Jump out of the pit. The Sufferings will hurl boulders at Fury if she stays on the lower ledge, so continue climbing. Top off your meters, drop back in, and finish them off.

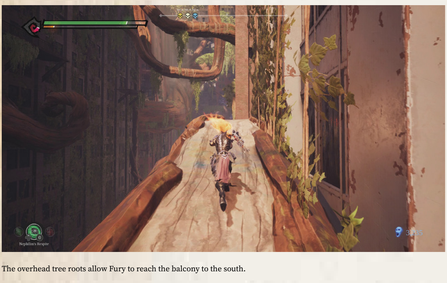

Employ hit-and-run tactics with the Triple Tempests to halve the threat.

Advance slowly up the road to the east, toward the tree roots and cars. The Sycophant Captains in this area boast quick-hitting charged attacks and pack quite the punch. Kite them away from any other nearby enemies so you can deal with them individually.

Clear the street of Sycophant before attempting to collect the **Angelic Artifact** from the teleporting Sycophant Captain at the end of the road.

Run along the tree root on the south side of the street, near the edge of the road, and Flame Jump into a whip swing to reach the tree root to the north. Ascend this tree root, grab the Fragment of Adamantine inside the room, then spot the two upper roots. Fury can whip swing across these roots to reach the balcony on the corner building, but the only way to do this is by conserving the double-jump until the last moment.

The overhead tree roots allow Fury to reach the balcony to the south.

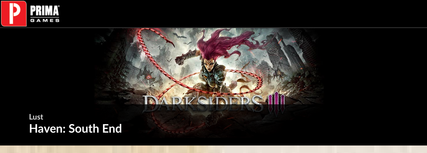

Flame Jump straight from the root—not as a double-jump—and whip swing from the first to the second root, making sure not to double-jump. Fury's Flame Jump will have reset, thus enabling a second Flame Jump onto the metal platform as part of your double-jump. Grab the **Luminous Visage** and drop down, as there's little Fury can do on the other balcony just yet.

Proceed south through the alley between the two buildings, kill the Sycophant Captain near the scaffolding, and cut the purple bait from the cocoon. Eliminate the enemies in the store to the left of the scaffolding and lead a Bomb Bug over to the bait. There are two bunches of purple rocks that can be destroyed with a Bomb Bug. Target the one to the west, across the main thoroughfare, and save the **Human** behind it.

Use a Bomb Bug from within the store to save the Human behind those rocks.

The other purple rocks are inside the store, behind a pile of debris, and they lead to a watery basement guarded by a Black Sycophant. Before exiting the area via the hole in the back of the store, continue down the road, away from the Serpent Hole, and drop into the trench. Crawl through the tunnel on the right to find another **Human**.

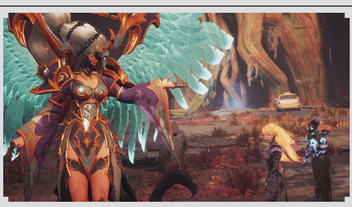

Lust

Haven: South End

CHURCH BELLS COME CRASHING DOWN

FIND HER AT ARIES

An unexpected encounter with Pride yields only a raincheck and knowledge of where she'll be waiting. Too proud to confront Fury until she's the last Sin remaining, Pride will wait for Fury in Aries. When the time comes—after Lust and Gluttony have been defeated—Fury can travel to Aries via the shimmering portal outside the cathedral in South End.

Cut through the cathedral to the cemetery and smash your way through the tombstones toward the **Angelic Artifact** to the north. The Suffering perched on the cliffside will leap into battle as you get close, so top off your Wrath and have the Triple Tempests ready to go. Use the scaffolding to scour the roof for items. Don't miss the **Demonic Artifact** on the lower roof to the west (leap up and over the main peak to reach it).

A Suffering and numerous Sycophant lurk in the cemetery.

Enter the cathedral and set fire to the cobwebs. The fire will spread to the belfry, burning the supports and causing the massive bell to fall through the floor, revealing a crypt. Drop through the hole, fend off the Skeletons in this first room, and then head down the hall.

Burn the spiderwebs to send the bell crashing through the floor.

Take care to top your Health Meter off before descending the stairs to the lower level of the crypt. Multiple Skeleton Archers stand atop elevated perches, ready to pierce you from all directions as you tackle the Armored Skeleton prowling the ground. Take out the archers first! Dodge their first volley and then Flame Jump into a Gravel Grinder attack to knock the nearest one off his mark. Clear the room of threats before approaching the Skeleton atop the stairs.

Don't worry about the ground troops until you take out the archers.

➤ YOU DROPPED SOMETHING

Don't shy away from engaging the tougher enemies, even if there isn't an obvious item nearby. Many of them drop a Fragment of Adamantine upon death.

Exit the church basement through the hole to the east and clear out the enemies near the Storm Currents. Glide across the three currents toward the eggs to the left of the chasm. Use the Storm Current nearest this landing spot to reach the upper ledge where the glowing pickup is. Grab the **Demonic Artifact** and Flame Jump onto the upper ledge to reach a Piece of Adamantine.

The only way to reach the ledge on the right is from the third Storm Current.

Sweep the upper ledge for items and then drop and enter the phosphorescent-lit cave to the west.

RIDE THE MANSK

Exit the cave to a clearing where a large jellyfish-like creature known as a Mansk seemingly floats above the ground, somehow supported by its tendrils. Neither friend nor foe, this otherworldly creature merely exists as a passive part of the landscape. Fortunately, it's not without benefit to Fury.

Strike its tendrils to force it across the cavern to the other side. You may need to hit it several times to position it correctly. Once near the cliff, Flame Jump (or press the Action button to climb) onto the Mansk and then from there onto higher ground. You'll need to use these creatures to solve several navigational puzzles in the coming region.

Behold the only creature Fury can't kill.

Loop around the area ahead to the left and drop to the area behind the large vines to find a narrow tunnel in the rock. Crawl through to the Bonelands.

Lust

Bonelands: The Hulking Carcass

WADE AMONGST THE UNDEAD

The flooded realm stretching before you is inhabited by all manner of undead creatures, from reanimated Sycophants to Angels and so much more. It's a deadly area, and it's easy to get lost among the factories and warehouses, so take your time, consult the accompanying map, and don't hesitate to backtrack to keep your bearings.

Don't let the ease at which you dispatch the Swamp Swarm lure you into a false sense of confidence. The Undead Scribe has multiple Arcane projectile attacks that can deplete Fury's Health in a flash. Aim to stay behind it or above it, especially if it raises both hands in unison. Trigger Havoc Form if unable to dodge the massive blue energy attack. This creature and the Undead Beast are among the most deadly in the Bonelands.

He's as slow as Sloth, and almost as deadly!

The undead fodder will keep coming until you cut off the supply. Splash through the water toward the creature with the blue glowing face and lengthy staff. This Undead Penitent is harmless in combat but will continue to summon undead minions until slain.

BONUS LURCHERS

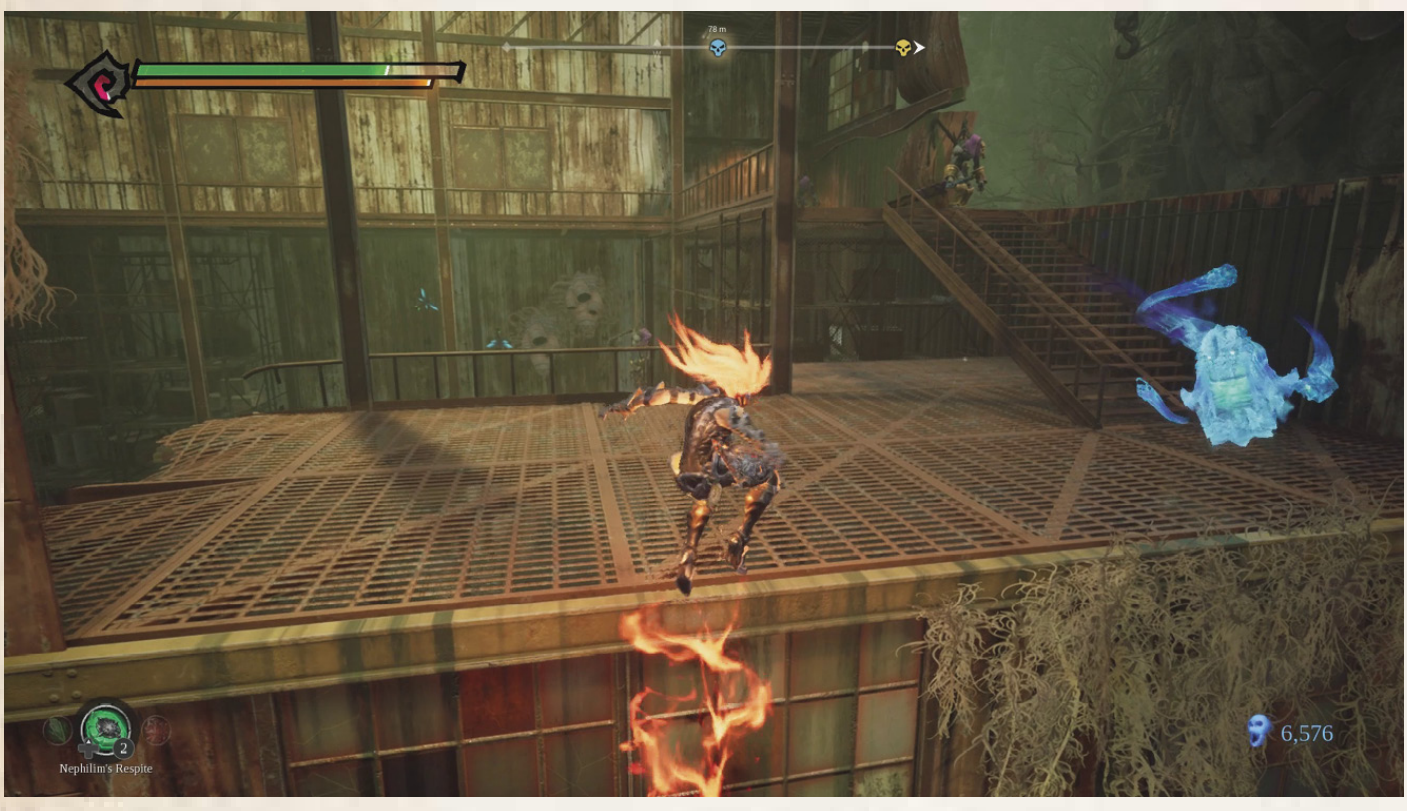

It's entirely possible to farm Souls and replenish your Wrath and Havoc Meters by allowing the Undead Penitent to summon as many undead as you feel like slaying. Similarly, Flame Jumping into the strung-up Undead Angel often causes them to come back to life, giving you more potential Souls to harvest.

The Undead Penitent will continue expanding his flock if left unchecked.

Put the Chains of Scorn to use against the Undead Purple to the left of the loading dock and collect the **Invigoration Core**. With this item, Fury can now carry four Nephilim's Respites. Break through the debris blocking the ventilation vent on the side of the building and crawl through to find a **Demonic Artifact**.

Strike the Mansk to coax it across the water to the rusty warehouse to the west. Run along the floating containers and jump onto it. Flame Jump to the upper catwalk and head up the ramp past the Undead Angel. Continue past the office equipment and drop into the container storage area to the west.

Darksiders III

Lust

Bonelands: Festering Pool

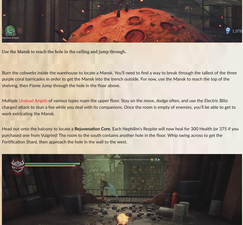

REACH THE ANGEL BASE

The Angels are at war with their unsoiled brethren in the floodwaters beyond the Serpent Hole. Attack both sides with prejudice, as neither will show a Horseman any mercy. Keep the Flame Hollow active to break through the Undead Angels' defenses, and steer clear of the toxic soup to the left, as contact can be fatal. Once done fighting, slash at the Mansk to drive it toward the cliff beneath the waterfall—the only way out of the pool is up. Flame Jump from the container to reach its back.

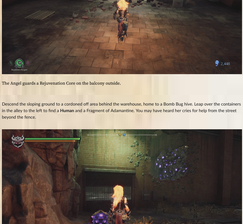

Slay any and all Angels, undead or otherwise.

The water is too deep to leap from, so Flame Jump off a container to land atop the Mansk.

The Angels' headquarters is across a ravine to the south. It's not far, but reaching it takes some effort—and a bit of puzzle solving. But first you need to survive a Undead Beast attack. Undead Beasts attack with claws and leaping ground-pound attacks, all the while seemingly teleporting around the battlefield.

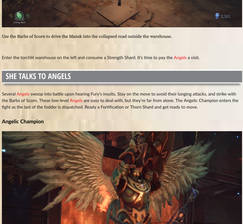

Don't hesitate to unleash Triple Tempests or Havoc Form against it, especially if any other enemies approach. Take a look around the exterior of the warehouse nearest the waterfall, then head inside through the hole in the brick wall.

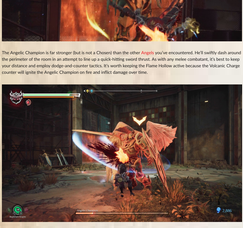

Use the Mansk to reach the hole in the ceiling and jump through.

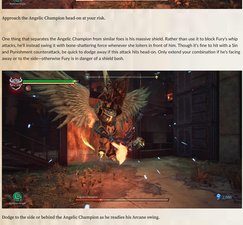

Burn the cobwebs inside the warehouse to locate a Mansk. You'll need to find a way to break through the tallest of the three purple coral barricades in order to get the Mansk into the trench outside. For now, use the Mansk to reach the top of the shelving, then Flame Jump through the hole in the floor above.

Multiple Undead Angels of various types roam the upper floor. Stay on the move, dodge often, and use the Electric Blitz charged attack to stun a foe while you deal with its companions. Once the room is empty of enemies, you'll be able to get to work confronting the Mansk.

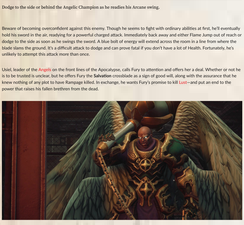

Head out onto the balcony to locate a **Rejuvenation Core**. Each Nephilim's Respite will now heal for 300 Health (or 375 if you purchased one from Valgrind) The room to the south contains another hole in the floor. While swing across to get the Fortification Shard, then approach the hole in the wall to the west.

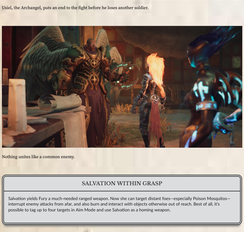

The Angel guards a Rejuvenation Core on the balcony outside.

Descend the sloping ground to a cordoned-off area behind the warehouse. Notice a Bomb Bug Nest. Leap over the containers in the alley to the left to find a **Human** and a Fragment of Adamantine. You may have heard her cries for help from the street beyond the fence.

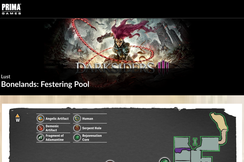

Release the Human behind the shipping containers, then use the Bomb Bugs to blast the purple coral.

Cut the purple ball down from the cocoon near the gate and use the Bomb Bug to blast through the purple coral. Hurl a second Bomb Bug at the larger mass of purple coral inside the warehouse to the right. You have to act fast, but it's possible to use a third Bomb Bug to detonate the purple rocks inside the warehouse on the left—quickly jump onto the rocks to the right, turn, and toss the Bomb Bug through the hole to uncover an **Angelic Artifact**.

Use the Barbs of Scorn to dislodge the Mansk into the collapsed road outside the warehouse.

Enter the torchlit warehouse on the left and consume a Strength Shard. It's time to pay the Angels a visit.

SHE TALKS TO ANGELS

Several Angels swoop into battle upon hearing Fury's insults. Stay on the move to avoid their lunging attacks, and strike with the Barbs of Scorn. These low-level Angels are easy to deal with, but they're far from alone. The Angelic Champion enters the fight as the last of the fodder is dispatched. Reads a Fortification or Thorn Shard and get ready to move.

Angelic Champion

The Angelic Champion is far stronger (but is not a Chosen) than the other Angels you've encountered. He'll swiftly dash around the perimeter of the room in an attempt to line up a quick-hitting sword thrust. As with any melee combatant, it's best to keep your distance and employ dodge and counter tactics. It's worth keeping the Flame Hollow active because the Volcanic Charge counter will ignite the Angelic Champion on fire and inflict damage over time.

Approach the Angelic Champion head-on at your risk.

One thing that separates the Angelic Champion from similar foes is his massive shield. Rather than use it to block Fury's whip attacks, he'll instead swing it with bone-shattering force whenever she lobbers in front of him. Though it's free to hit with a Sin and Punishment counterattack, be quick to dodge away if this attack hits head-on. Only extend your combination if he's facing away or to the side—otherwise Fury is in danger of a shield bash.

Dodge to the side or behind the Angelic Champion as he readies his Arcane swing.

Beware of becoming overconfident against this enemy. Though he seems to fight with ordinary abilities at first, he'll eventually hold his sword in the air, readying for a powerful charged attack. Immediately back away and either Flame Jump out of reach or dodge to the side as soon as he swings the sword. A blue belt of energy will extend across the room in a line from where the blade slams the ground. It's a difficult attack to dodge and can prove fatal if you don't have a lot of Health. Fortunately, he's unlikely to attempt this attack more than once.

Uziel, leader of the Angels on the front lines of the Apocalypse, calls Fury to attention and offers her a deal. Whether or not he is to be trusted is unclear, but he offers Fury the **Salvation** crossblade as a sign of good will, along with the assurance that he knew nothing of any plot to have Kamaaya killed. In exchange, he wants Fury's promise to kill Lust—and just an end to the power Bar raises his fallen brethren from the dead.

Uziel, the Archangel, puts an end to the fight before he loses another soldier.

Nothing soothes like a common enemy.

SALVATION WITHIN GRASP

Salvation yields Fury a much-needed ranged weapon. Now she can target distant foes—especially Poison Mosquitos—interrupt enemy attacks from afar, and also burn and interact with objects otherwise out of reach. Best of all, it's possible to tag up to four targets in Ash Mode and use Salvation as a homing weapon.

Ascend the metal stairs near Uziel and drop into the caged area to find an **Angelic Artifact**. Flame Jump out of the cage and exit the Angels' headquarters via the door to the right of Uziel's desk. Collect the **Demonic Artifact** behind the crates before dropping into the cave.

DARK SOULS III

Lust

Bonelands: Hangman's Tree and Drowned Warehouse

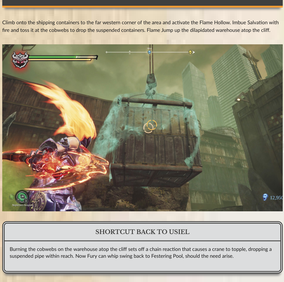

BRING SALVATION TO THE UNDEAD

Fury made it to the other side of the toxic swamp encountered earlier, but she's got a long road ahead of her to reach Lust. The area known as Hangman's Tree is surrounded by all manner of undead creatures as well as a wealth of pickups.

Put Salvation to use against any flying Undead Angel Raiders you encounter to knock them from the sky. Imbue the crossblade with the Flame Hollow to fight multiple Swamp Swarm aflame...after which a quick toss should finish them off.

Grab the **Demonic Artifact** near the tree and circle around to the left. Lure the Undead Beast toward you, away from the highway overpass, and unleash your Havoc Form to dispatch it quickly. This isn't a creature you want to take a chance with, as its Arcane fire and sky-high ground pound attack are quite deadly.

Use Salvation to bait the Undead Beast away from the toxic flood.

➤ LONG-RANGE EXTERMINATION

The Obscurs enhancement lies in the open beyond the tree. It's highly valuable, but don't run after it blindly. First use Salvation to destroy the Poison Mosquito nest on the bridge support to the left; otherwise, you'll likely get knocked into the toxic waters. Elementally-charged Undead explode on contact. Destroying their hive with Salvation is the only foolproof way to halt their attacks.

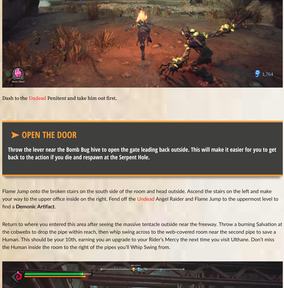

Climb onto the shipping containers to the far western corner of the area and activate the Flame Hollow. Imbue Salvation with fire and toss it at the cobwebs to drop the suspended containers. Flame Jump up the dilapidated warehouse atop the cliff.

SHORTCUT BACK TO USIEL

Burning the cobwebs on the warehouse atop the cliff sets off a chain reaction that causes a crane to topple, dropping a suspended pipe within reach. Now Fury can whip swing back to Festering Pool, should the need arise.

The red and gold Red Undead Angel Raider can fire Arcane projectiles from its broadsword and is a more significant threat than the others you've seen. Be careful not to waken any of the Undead Angels with an errant throw of Salvation, else you might get more than you can handle. Consume a Havoc Shard as you exit the warehouse toward the sound of screaming, as an Undead Scribe leads several others against the Angels around the corner.

Don't hesitate to use Havoc Form if you get cornered.

Eliminate the threat, then use the Salvation crossblade to destroy the hive atop the crates to the right. Break through the crates to find a Fragment of Adamantine and a pile of purple rocks you'll have to come back to later. Exit the warehouse and descend the slope toward the Serpent Hole near the Mansk.

REACH THE CLIFFTOP MANSK

The only way to reach Lust is by finding a way onto the freeway. To do that, Fury must find a way to get the Mansk down off the cliffs above the Serpent Hole. Doing so requires a complex path through the adjacent shipyard warehouses. Naturally, there's a number of undead enemies lurking about, and we'll call attention to any particular threats, but this section focuses primarily on helping you find your way.

Need to find a way to get what's up there down here.

Head through the drainage pipe to the flooded area and collect the Havoc Shard near the two Swamp Swarms. Eliminate the Undead Penitent in the cave to the left and cut the purple meat down from the cocoon near the ceiling. Once you've slain the Undead Angel Brute in the warehouse—be careful as it fights similarly to the Flame Warden, although with much less Health—carry a Bomb Bug over to the bait and use it to blow up the rocks. The flooded cave contains **Incandescent Remains** and multiple Undead Purples.

Dash to the Undead Penitent and take him out first.

➤ OPEN THE DOOR

Throw the lever near the Bomb Bug hive to open the gate leading back outside. This will make it easier for you to get back to the action if you die and respawn at the Serpent Hole.

Flame Jump onto the broken stairs on the south side of the room and head outside. Ascend the stairs on the left and make your way to the upper office inside on the right. Fend off the Undead Angel Raider and Flame Jump to the uppermost level to find a **Demonic Artifact**.

Return to where you entered this area after seeing the massive tentacle outside near the freeway. Throw a burning Salvation at the cobwebs to drop the pipe within reach, then whip swing across to the web-covered room near the second pipe to save a Human. This should be your 50th, earning you an upgrade to your Rider's Mercy the next time you visit Ulthane. Don't miss the Human inside the room to the right of the pipes you'll Whip Swing from.

Whip swing across the pipes in the canyon to reach the next warehouse.

Throw the lever beside the massive sliding gate to access the warehouse. That gate is actually a sliding crane that spans the width of the warehouse, and now, in its green, "open" position, the far exit is blocked.

Though it may seem easy to exit the room—there are purple rocks and purple bait visible—the only Bomb Bug is beyond the gate on the far side. To reach it you must flip the switch a second time to close the near side of the gate. Dash through the opening before the gate closes so you can access the Bomb Bug on the other side.

Open the gate, then pull the switch and dash through as it closes.

Toss the Bomb Bug at the bait and then use it to detonate the purple rocks to the west. Run along the path behind the containers and ascend the storage racks to locate a Mansk. This one won't help you reach the freeway, but it will help you get back outside the warehouse. Knock it down to the lower level and over to the northern side of the room so you can reach the upper path leading back outside. Before you go, however, grab a second Bomb Bug and leave it feasting at the bait.

Use the Mansk to exit the warehouse and to get a **Demonic Artifact** from above the open gate.

Open the gate and throw the Bomb Bug at the purple rocks on the south side of the room. Drop through the hole to reach the Mansk on the cliffs above the Serpent Hole. Drive it up the slope toward the freeway and use it to reach the roadway.

Lust

Bonelands: Mangled Freeway And Cargo Ship

HIGHWAY TO A CARGO SHIP

Follow the roadway and toward the ship in the distance, taking note of the stalactite-tentacle that wants determined to pill your progress. A smattering of enemies will put up a fight, but none are of note save for the Undead Beast. The narrow roadway limits your ability to dodge its Arcane fire and ground wound attacks, so watch your Health Meter closely and don't hesitate to trigger Havoc Form.

The Undead Beast serves as the main threat along the freeway.

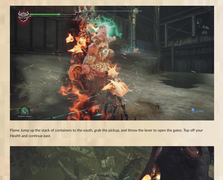

The road Serpent Hole isn't far. Descend the crumbling road surface to find Vigdrir-now another warehouse. If you were planning a trip back to Maker's Forge, put it off for one more minute. First, roar through the ventilation duct to find a Human in the next room.

Drop through the hole in the floor around the corner from the man you saved and chase after the Undead Raider. Hit him with the Salvation crossbow when he's not looking, then back away and let him again as he flies past. Drop into the waters nearb, go left, and uncover the ducktails behind the wooden crates. Cover through and light the Undead Puzzle for the Luminous Visage in the corner.

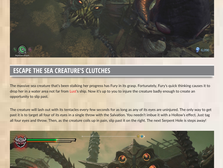

Proceed along the flooded hallway to the gate control. This opens a gate outside the Festering Pool Serpent Hole. Reset your respawn location and continue around the corner, where the tentacle makes another appearance.

Flame Jump from the box cluster to the ledge on the right. Whip swing across the gap and round the corner to where the Undead Raider is fighting the Undead Beast. Help him out by shooting the Beast with the Salvation crossbow. Then, when the fire air and undead allay the enemy with a flaming Aura Scorch charged attack. Stick close to where you enter the room to avoid being surrounded by the Swamp Swarm being summoned by the out-of-reach Undead Pennant.

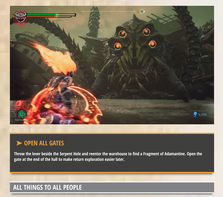

Flame Jump up the stack of containers to the south, grab the pickup, and throw the lever to open the gates. Top off your Health and continue east.

ESCAPE THE SEA CREATURE'S CLUTCHES

The Hoverer are creatures that's been stalking her progress but Fury in its grasp. Fortunately, Fury's quick thinking causes it to drop her and she can now use her Sand Leap ability. Now it's up to you to blaze the creature badly enough to create an opportunity to slip past.

The creature will lash out with its tentacles every few seconds for as long as any of its eyes are uninjured. The only way to get past it is to target all four of its eyes in a single throw with the Salvation. You needn't indeue it with a Hollow's effect. Just lay all four eyes and throw. Then, as the creature pulls up to gaze, slip past it on the right. The next Beaver Hole is steps away!

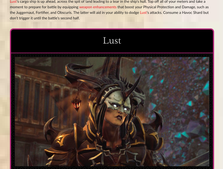

➤ OPEN ALL GATES

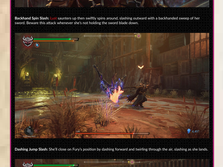

Throw the lever beside the Serpent Hole and reenter the warehouse to find a fragment of Adamantine. Open the gate at the end of the hall to make return exploration easier later.

ALL THINGS TO ALL PEOPLE

Each's large she is up ahead, across the sight of land leading to a tear in the ship's hull. Top off all of your meters and take a moment to prepare for battle by equipping weapon enhancements that boost your Physical Protection and Damage, such as the Juggernaut, Fortifier, and Obscuris. The latter will aid in your ability to dodge Lust's attacks. Consume a Havoc Shard but don't trigger it until the battle's second half.

Lust

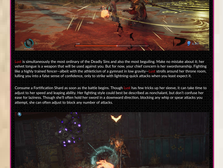

Backhand Spin Slash: Lust's scariest up-then-swiftly spins around, slashing outward with a backhanded sweep of her sword. Beware this attack whenever she's not holding the sword blade down.

Dashing Jump Slash: She'll close on Fury's position by dashing forward and beeling through the air, slashing as she lands.

Flipping Slash: Lust will occasionally leap high into the air and do a front flip over Fury's head, slashing as she flies overhead.

Charged Slash: The most basic of her attacks, this standard charged sword attack can be easily dodged.

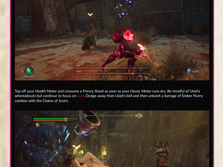

Lust is simultaneously the most ordinary of the Deadly Sins and also the most beguiling. Make no mistake about it, her overall target is a weapon that will be used against you. But for now, one chief concern is her swordsmanship. Fighting like a highly trained fencer—albeit with the athleticism of a gymnast in top gravity—Lust shields around her throne room, taking you more a few sense of confidence, only to strike with lightning quick attacks when you least expect it.

Consume a Fortification Shard as soon as the battle begins. Though Lust has few tricks up her sleeve, it can take time to adjust to her speed and leaping ability. Her fighting style could best be described as nonchalant, but don't confuse her ease for laziness. Though she'll often hold her sword in a downward direction, blocking any whip or spear attacks you attempt, she can often adjust to block any number of attacks.

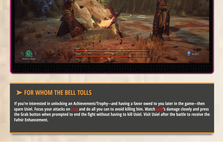

It's important to constantly be dodging backward and to the side to keep a safe distance from her. Throw charged Salvation attacks at her throughout the fight. Often, she'll block it as the weapon leaves your hand, but the crossbow's hammering action can cause a hit on the recoil. Sometimes this will even interrupt her attack, creating an opening for you to attack.

It's all about dodging and countering with Arcane Counters. The Volcanic Charge is a particularly useful counter, but there's no reason not to take it a step further. Trigger the Immolation attack at close range to light Lust on fire and to add a flaming effect to each of your attacks. Pepper her with attacks to drop her Health to the halfway point. This is when things get interesting.

Lust leaps into the arena to offer assistance, but he's no match for Fury's seductive promises. Severing his vow to Fury, he raises his massive bell alongside Lust and attacks.

Lust doesn't have the speed to keep pace with Fury and Lust as they cartwheel and dash around the arena, but he will attempt to do so. Stay close to Lust and dodge his attacks. Then, when he's distracted by Fury, switch to Havoc Form and release an attack combo. Focus your attacks on Lust. Switch back to Fury when Lust and trigger Havoc Form when you get her alone. You should have time to truly weaken her, while being immune to any attacks from Lust.

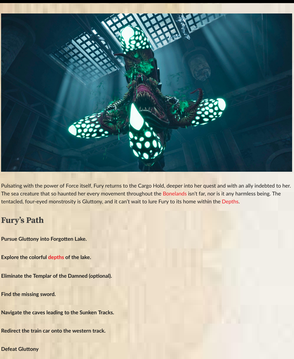

Top off your Health Meter and consume a Frenzy Shard as soon as your Havoc Meter runs dry. Be mindful of Lust's overzealousness but continue to focus on Fury. Dodge away from Lust's bell and then unleash a barrage of Ember Fury's combos with the Chains of Scorn.

➤ FOR WHOM THE BELL TOLLS

If you're interested in unlocking an Achievement/Trophy—and having a lover sword to you later in the game—then spare Lust. Focus your attacks on Fury and do all you can to avoid killing him. Watch Lust's damage closely and press the Grab button when prompted to end the fight without having to kill Lust. Visit Izzet after the battle to receive the Fabled Inhancement.

Path to Gluttony

Pulsating with the power of Force itself, Fury returns to the Cargo Hold, deeper into her quest and with an ally indebted to her. The sea creature that so haunted her every movement throughout the Bonelands isn't far, nor is it any harmless being. The tentacled, four-eyed monstrosity is Gluttony, and it can't wait to lure Fury to its home within the Depths.

Fury's Path

Pursue Gluttony into Forgotten Lake.

Explore the colorful depths of the lake.

Eliminate the Templar of the Damned (optional).

Find the missing sword.

Navigate the caves leading to the Sunken Tracks.

Redirect the train car onto the western track.

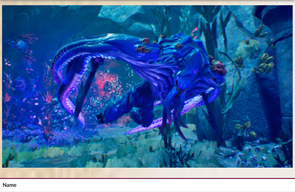

Defeat Gluttony

Fury's trip through the Depths features a bit less combat than earlier areas, but that isn't to say it will be easy. Many of the creatures here resemble those encountered elsewhere, especially from the Nether, but they pack quite a bit more punch here. Nevertheless, much of the challenge posed in the Depths comes from the environment itself—and the difficulty of navigating its underwater labyrinth. It's best to take your time and be thorough. The Force Hollow allows access to numerous paths that may have escaped your attention. Seek out the purple coral and shatter every piece you encounter, as there are plentiful items tucked away in secret tunnels and caves.

It's worth aiming to be at least level 42 prior to the fight with Gluttony. Consider purchasing any necessary Slivers of Adamantine to perform the early upgrades for Malet of Scorn, while continuing to upgrade the Barbs of Scorn to +8. This region contains both an Invigoration Core and a Rejuvenation Core, providing some useful upgrades to Fury's healing ability.

Save the Humans

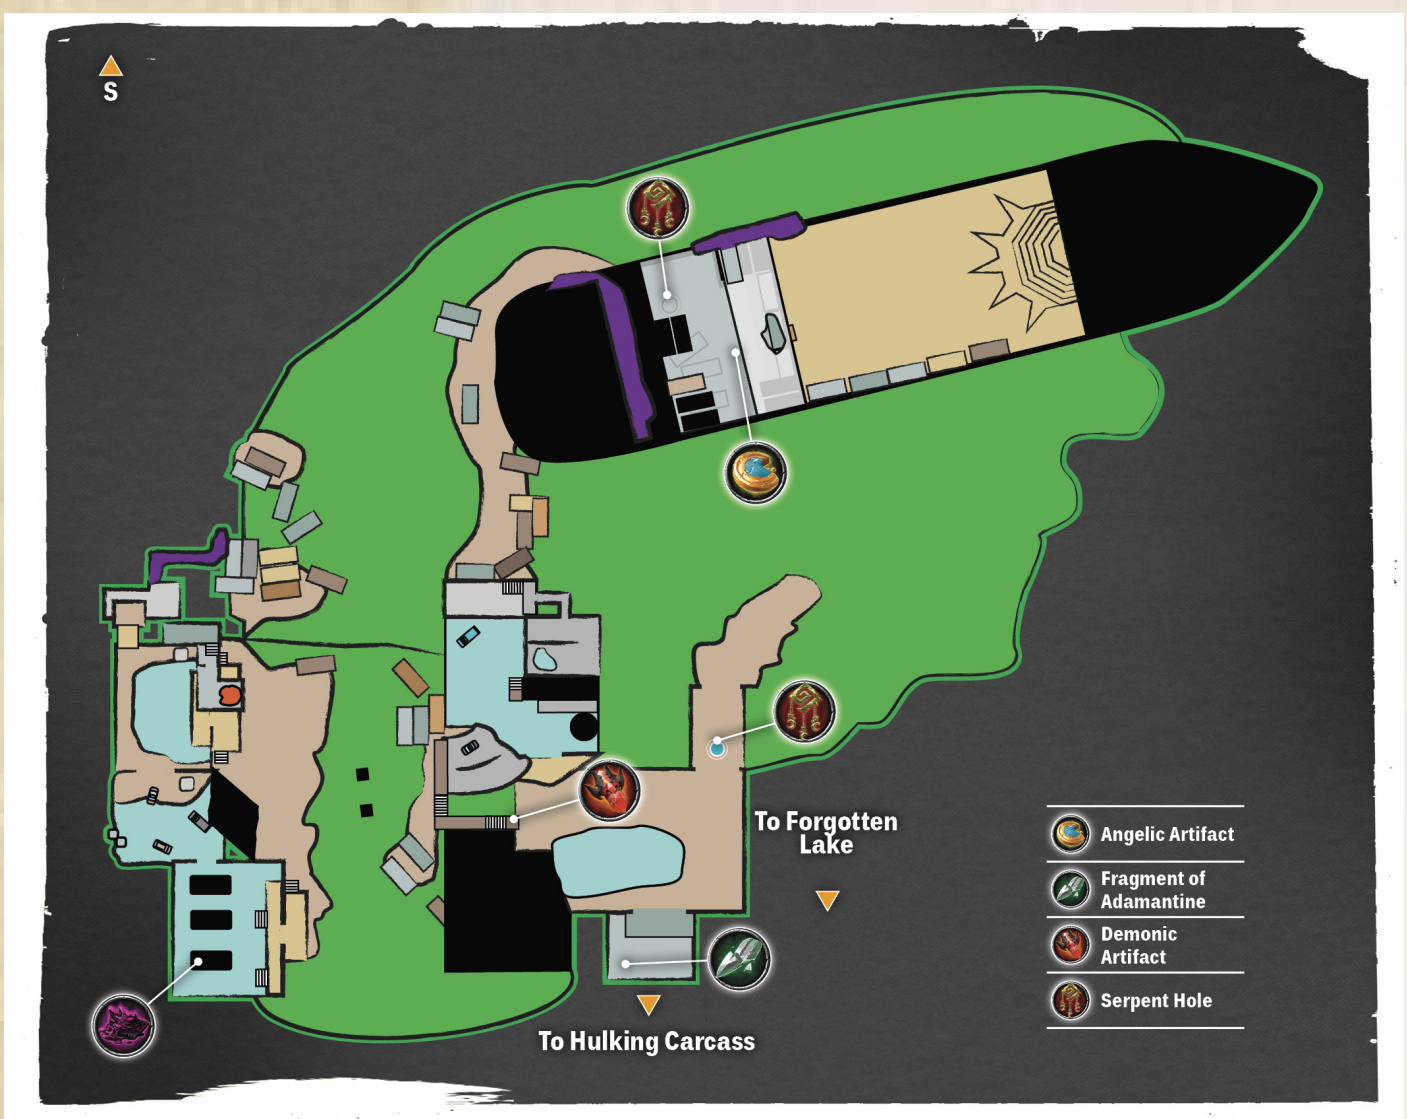

12. Before leaving Forgotten Lake, Flame Jump onto the collapsed building floor to the south, then again to leap over the wall.

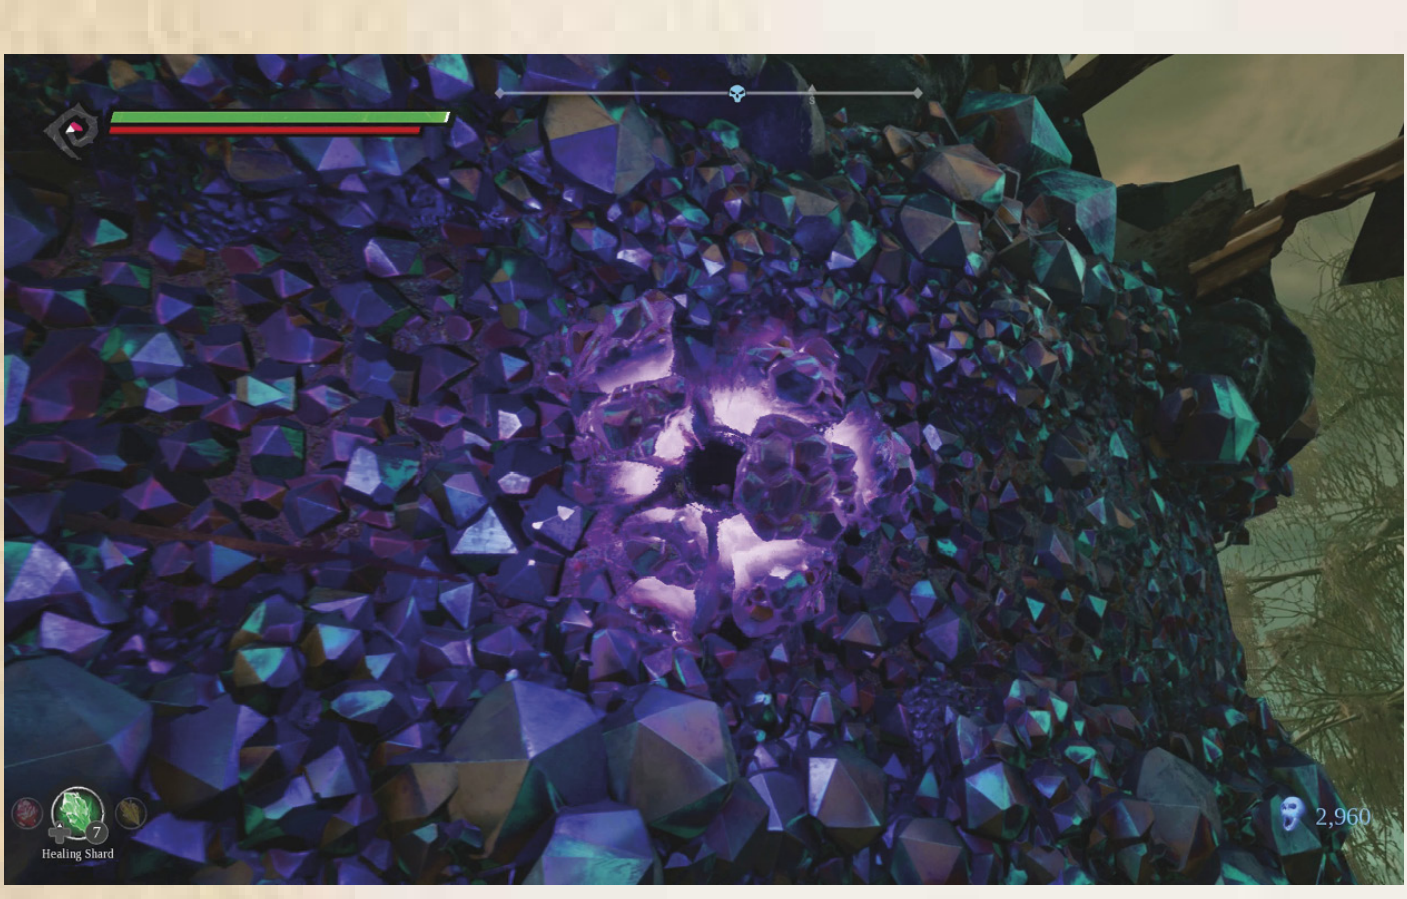

Gluttony

Bonelands: Cargo Hold

TIME FOR A SWIM

Leap out from behind the storage containers near the Serpent Hole and collect the **Luminous Visage** dropped by Lust. Approach the purple crystals in the corner while using the Force Hollow, leap into the air, then hold the Jump button. Doing so transforms Fury into a Force Ball, allowing her to magnetize onto the purple crystals. Roll along the path to scale the wall and reach the uppermost level of the ship.

Grab the **Angelic Artifact** and approach the purple coral growing along the wall. Thanks to having the Force Hollow, Fury no longer needs a Bomb Bug to break through these rocks. Charge up the Hollow attack to unleash a Moonshot attack with the Mallet of Scorn. Leap across the gap and use the Force Ball ability to cling to the next Force surface.

Roll along the ship's stern to the far end of the path and drop to the ground below. Walk alongside the Watcher as she shares her take on the situation at hand. Use the Mallet of Scorn to shatter the numerous coral assemblages near the containers. The Lurcher Crystals will no doubt come in handy. Charge up Salvation with the Force Hollow active and fling it through the rocks on the side of the warehouse.

Crawl through the vent atop the stairs and break through the rocks in the office to uncover a hole in the floor. Drop through the hole and round the corner to take on the Undead Angel Raider. Be careful not to hit the Undead Angels hanging from the ceiling with Salvation, else you'll likely invite them to the fight. Similarly, do not run deeper into the warehouse, as doing so will trigger an Undead Angel Brute's emergence.

Ascend the stairs past the fallen section of highway to encounter the top of the fleshy appendage atop Gluttony's head. Strike it with a charged-up Hollow attack to send Gluttony fleeing into the Depths. Drop down and collect the **Demonic Artifact** below the catwalk, then enter the warehouse across from the entrance to the Depths.

The Mallet of Scorn's "Rapture" Arcane Counter knocks enemies back and causes even the Undead Angel Brute to slump and pant.

Kill the Undead Angel Brute that appears, grab the Fragment of Adamantine, and explore the ductwork to open up a way back to the Hulking Carcass. When ready, dive into the watery pit and swim into the Depths.

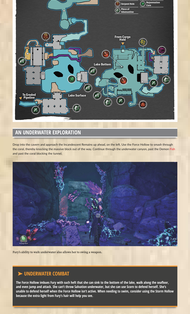

MORE TO EXPLORE LATER

There's a fair bit more to the Cargo Hold area, east of the toxic pool beyond the warehouse, but that's an area best left for later. Return via the Cargo Ship Serpent Hole once Fury has her full complement of Hollows.

Outlaws

Depths: Forgotten Lake

AN UNDERWATER COMBAT

Drop into the Lowest and explore all the Incandescent Remains go ahead, on the left, Use the Flare Hollow Q to push through the coral, thereby clearing the explosive mass out of the way. Continue through the underwater caverns past the Skeletal Fish and you'll soon find the Key Relic.

Keyl's ability to mark underthrown also allows her to setting a weapon.

▶ UNDERWATER COMBAT

The Forts Hollow release Key with each bell that she can ask in the former of the lake, walk along the seafloor, and make jump and attack. She can't throw Underwater underwater, but she can use a burst to distract nearby. Don't unable to defend herself when the Forts Hollow isn't active. When needing to swim, consider using the Storm Hollow because the ones that have it can't be self-Key you are.

Disable the Flares Hollow just for use water-ready in the waters beyond the coral. The Floating Mine go ahead twelve to do target them for the signal that's hunted and and explodes on contact with stubborn creatures. Each point it harbors it explodes.

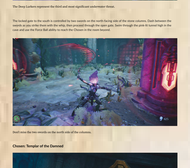

Dive the Armored Skeleton in the room ahead and then smash the cone to reveal the third sword statue. Target the three with Hollow to open the gate to the Sentient Anomaly. Help Hollow or other ally to collect your ones points.

The respective section of Forgotten Lake for around the corner. Once full of Life swords, corridors, and underwater scenery. Underwater Corridors Hollow Q to push through the coral, thereby clearing the explosive mass out of the way. Continue through the underwater caverns past the Skeletal Fish and you'll soon find the Key Relic. Kill a caster and respawn, then utilize the collapse Quad the large coral for provided and the Midnight. Kill Incinerated a chokehold help around the area.

▶ BREATHLESS SWIMMING

Easy never runs out of air underwater, so don't worry about needing to surface!

Dive into the water and descend to the bottom, just west of the entry point. Here, two Ordis suckers attack. Their speed, stats, and behaviors make them a bit tougher, but if you can dispatch them quickly with the quick-hitting Burst of Scorn. Swim into the underwater temple to the west for a **Luminous Visage**.

The Decoy Lockers represent the Wisest and most significant underwater threat.

The locked gate to the south is controlled by two sockets on the north facing side of the stone columns. Dash between the columns to activate both sockets and open the gate. Continue through the gate. Swim through the north channel high at the coral and cut the Relic Ball ability to reach the Chasers in the room beyond.

Small areas like two wooden via the north side of the columns.

Chosen: Tempter of the Damned

Armed with a massive lance and shield, the Tempter of the Damned is the largest of the Skeleton Swords. His primary means of attack is a powerful charging lance thrust. He can also block attacks with his shield, and he has a ranged attack that fires a volley of Scythe Swords that don't get pierced. The Tempter of the Damned will swiftly make use of his ranged Sweeping with a ranging jab.

Dodge away from the sword's direction or you're in position to counter without getting knocked back.

It's best to weaken the giant out to quickly with his ranging, as it may try to bring the fight to him. Strike quickly and then dodge close before he can unleash a charged shield slam attack.

Watch out for the giant's sword attack when you attempt the Luminous Visage and Armed through to a waiter-turned that strikes back a weapon to the axe. Knock the purple blade toward the back of the Hollow ahead and leap up to reach the rooftop. Use Hollow Hollow's, including the Lance Burst, then pick the **Rejuvenation Core**.

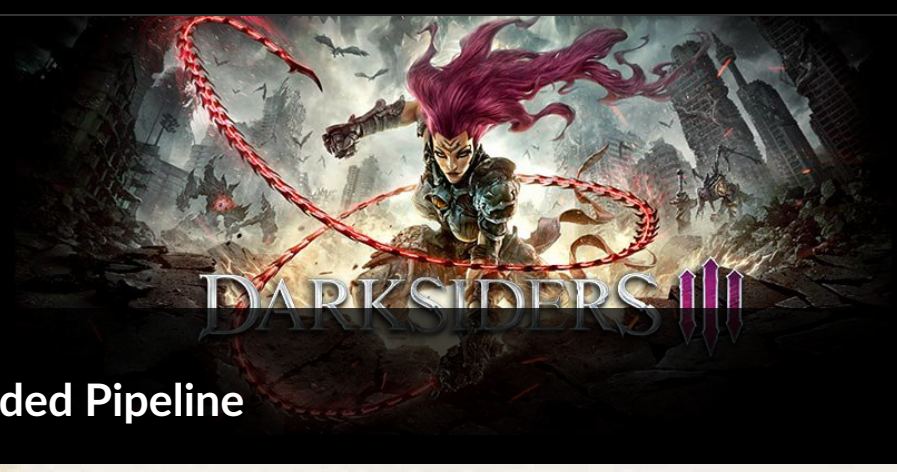

Don't underestimate how far he can reach with his lunging melee attack.

If you'll lag being lanced, the Tempter of the Damned bursts into flight. Much away at the thick sign of smoke, and Flare will be able to target him with the Flare Hollow Q. Flare Hollow deals 1000 True Damage to the attacks, the flight continues to reach the same way.

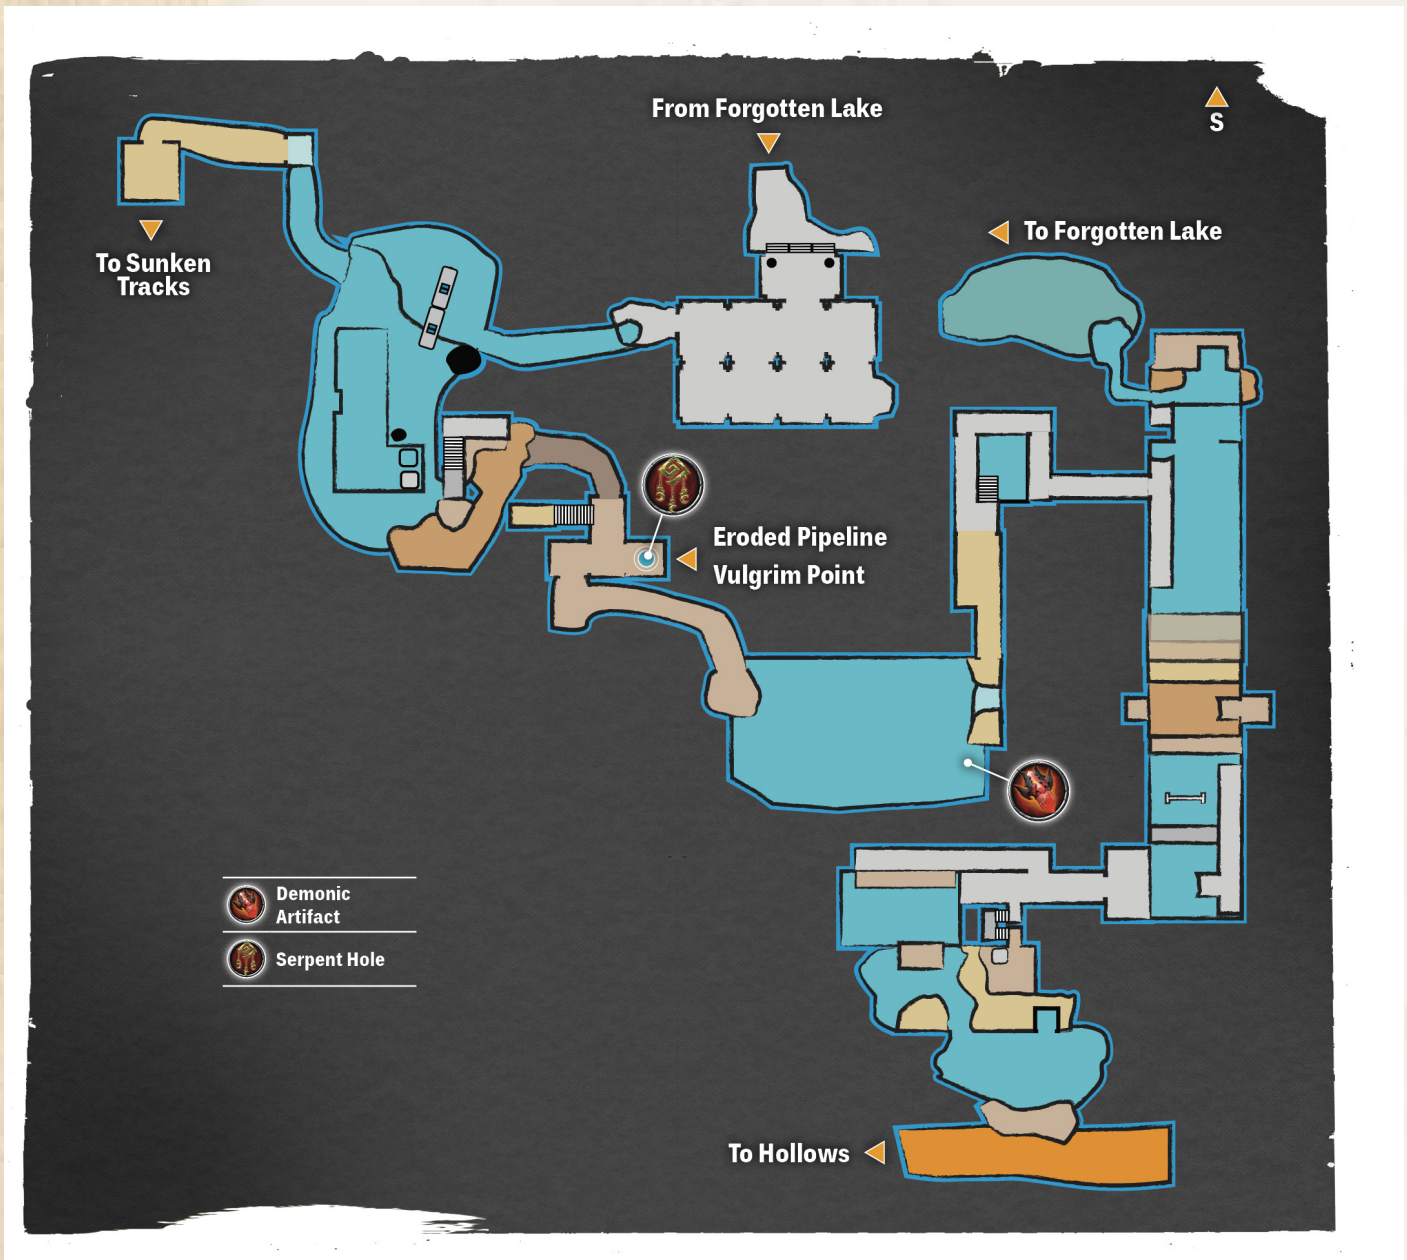

Small Ice destroyed by the Remnant.

The Tempter of the Damned is immune to the Tools Template attack, so continue to hit him with Arcane Cautions and Hold-Fill attacks with the Hollow of Scorn. Continue to Strength Shield when given the chance and Arcane Burst Flare Hollow Hollow Tagged Ally. Cautious attack while using the Flare Hollow to inflict Scorn Damage, and continue doing so as the melee attacks. Flare Hollow deals 1000 True Damage to the Tempter of the Damned. Flare Hollow Hollow Hollow

Gluttony

Depths: Eroded Pipeline

OUT OF THE WATER

Follow the tunnel beyond the Serpent Hole as it curves around the edge of a large flooded cave. Dive into the water, swim for the **Demonic Artifact** near the Floating Mine spawner to the right, then make for the red-lit tunnel to the east.

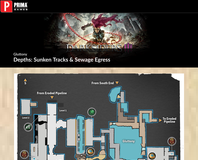

Dangerous swimming ahead. Dash for solid ground to the east.

This tunnel leads to a flooded cave loaded with Floating Mines and various rock spires that can make dodging them tricky. Move fast—don't forget that you can dash underwater—and pluck the **Angelic Artifac**t from the seafloor. Swim to the east, surface quickly, and leap onto dry ground before the Floating Mines detonate.

The ruined train station ahead is filled with cocoons, many of which contain a Blue Mimic ready to attack. Break them open one at a time to clear the room of their threat, then pay Vulgrim a visit in the corner.

THE STENCH OF GLUTTONY

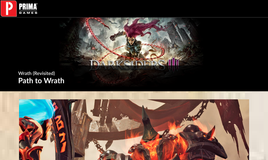

Fury will return to the flooded cave of the Eroded Pipeline soon enough, but first she must navigate the Sunken Tracks and Sewage Egress areas of the Depths. Only by reaching the top can she flush the next Sin from the Depths.

Gluttony

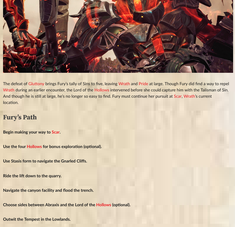

Depths: Sunken Tracks & Sewage Egress

From South Exit ↑
From Eroded Pipeline

Depths: Sunken Tracks & Sewage Egress
Depths: Sunken Tracks & Sewage Egress

Wrath (Bolstered)

Path to Wrath

The defeat of Gluttony brings Fury's tally of boss to five, leaving Wrath and Pride at large. Though Fury did find a way to repel Wrath during an earlier encounter, the Lord of the Hollows intervened before she could capture him with the Talisman of Sin. And though he is still at large, he's no longer so easy to find. Fury must continue her pursuit at Scar, Wrath's current location.

Fury's Path

Begin making your way to Scar.

Use the four Hollows for bonus exploration (optional).

Use Stasis form to navigate the Gnarled Cliffs.

Ride the lift down to the quarry.

Navigate the canyon facility and flood the trench.

Choose sides between Abrasis and the Lord of the Hollows (optional).

Outwit the Tempest in the Lowlands.

Disable the giant drill.

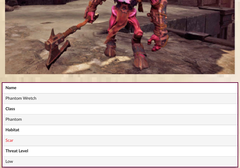

Ride the conveyor belts at the Refinery.

Disable the Tempest.

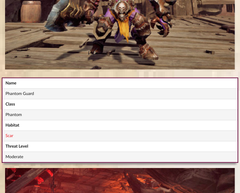

Defeat Wrath.

The area known as Scar contains fewer enemies than most regions, but the ones it has are quite durable—and some have the ability to summon reinforcements! The Stasis Hollow will continue to serve Fury best, as the Stasis Shield provides a lengthy dose of near invincibility. This is especially useful when the Phantom Guard Captain blares its horn. The first horn blast summons enemies, while the second lets them into a frenzy. Though each Hollow is required in order to navigate a path to Wrath, the presence of a massive tornado known as the Tempest will require frequent use of the Force Hollow if Fury is to stay grounded.

The many Large Lurcher Caches should help you to upgrade Fury to level 60 by the time you reach Wrath. Continue spreading your upgrades across all three attributes until Strength reaches +95 percent, then focus on Arcane and Health. The Chosen in this chapter will earn Fury two additional Essences of a Chosen. Use these wisely to upgrade your enhancements. We recommend shifting focus from enhancements that generate Soul Lurchers to those that increase Arcane damage, generate additional Wraith, and increase Fury's dodge window. Both the Grock and Wrath are quite fast, and an upgraded Obscuris enhancement is worth having on hand.

Save the Humans

13. Climb the shaft near the Sewage Egress Serpent Hole and smash through the barricaded doorway to free this Human.

14. Use the Force Hollow's Mallet of Scorn to smash through the purple rocks at Crossroads to find this Human hiding behind a barricade.

15. Use Stasis form to wall-jump up the wooden shaft in the north end of the Drilling Annex (near the third spinning contraption) to find this Human.

16. Freeze the rollers at the west end of the Drilling Annex and drop beneath them. Head north to find a Human.

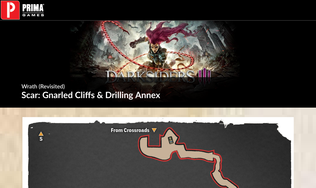

Wraith Wasteland

Depths Ended Pipeline

THE HUNT CONTINUES

The Lord of the Hollows has chosen to harness the Nullifi and Null Hollow-spawn Nullifi. The Grave Hollow we attack Sys to walk on the Nullifi Hollow-spawn Nullifi. Hollow-spawn Nullifi. Hollow-spawn Nullifi.

Wrath (Revisited)

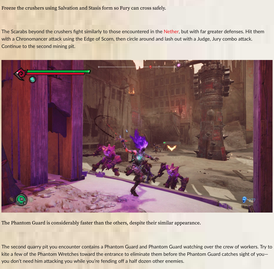

Scar: Gnarled Cliffs & Drilling Annex

FREEZING TIME AT THE QUARRY

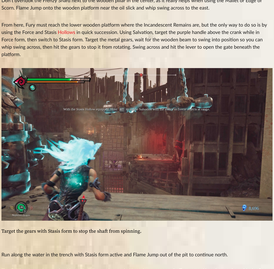

Hit the purple lever beside the gate with the Mallet of Scorn to access the Gnarled Cliffs region. The area ahead contains several Phantom Wretches toiling with their pickaxes and an Taskmaster watching over them. Target the Taskmaster first. It will summon clones of itself in an effort to confuse you for as long as the original remains. Depending on your upgrades the clones and Phantom Wretches can be killed with one or two strikes of the Barbs of Scorn.

To leave the area, Flame Jump onto the wooden platform on the western side of the site and switch to Force form. Hit the purple-glowing handle of the apparatus above the gears with a charged Salvation toss. This will turn the crank until the wooden beam stops in position for you to whip swing across to the other platform.

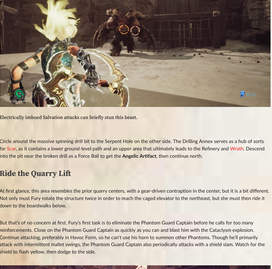

This one comes to a stop right where you need it, but others will require use of the Stasis Hollow.

Eliminate the Phantom Wretch near the crushing cylinders and switch to Stasis form. Target the two cylinders with Salvation, charge the crossblade with Stasis form, and throw it. This temporarily freezes the machinery, allowing Fury to cross without harm. But don't delay. The effect only lasts six seconds.

Freeze the crushers using Salvation and Stasis form so Fury can cross safely.

The Scarabs beyond the crushers fight similarly to those encountered in the Nether, but with far greater defenses. Hit them with a Chiromancer attack using the Edge of Scorn, then circle around and lash out with a Judge, Jury combo attack. Continue to the second mining pit.

The Phantom Guard is considerably faster than the others, despite their similar appearance.

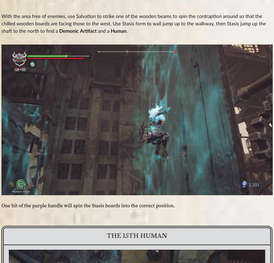

The second quarry pit you encounter contains a Phantom Guard and Phantom Guard watching over the crew of workers. Try to kite a few of the Phantom Wretches toward the entrance to eliminate them before the Phantom Guard catches sight of you—you don't need him attacking you while you're fending off a half dozen other enemies.

LET IT BURN

Use Flame form to ignite the oil slick to the west and bait the tougher enemies into the fire. Fury will be safe as long as you don't switch Hollows.

Don't overlook the Frenzy Shard next to the wooden pillar in the center, as it really helps when using the Mallet or Edge of Scorn. Flame Jump onto the wooden platform near the oil slick and whip swing across to the east.

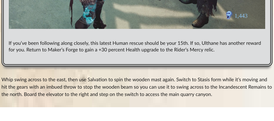

From here, Fury must reach the lower wooden platform where the Incandescent Remains are, but the only way to do so is by using the Force and Stasis Hollows in quick succession. Using Salvation, target the purple handle above the crank while in Force form, then switch to Stasis form. Target the metal gears, wait for the wooden beam to swing into position so you can whip swing across, then hit the gears to stop it from rotating. Swing across and hit the lever to open the gate beneath the platform.

Target the gears with Stasis form to stop the shaft from spinning.

Run along the water in the trench with Stasis form active and Flame Jump out of the pit to continue north.

The Drilling Annex is contained in the building to the north. Note the presence of a Trauma and leap into action with the Storm Hollow active. Ignore the other enemies at you focus on avoiding the Trauma's mighty ground pound and double-claw uppercuts—you'll likely defeat the others without focusing on them. Stay on the move, unleash Triple Tempests, and put your finely honed dodging ability to use.

Electrically imbued Salvation attacks can briefly stun this beast.

Circle around the massive spinning drill bit to the Serpent Hole on the other side. The Drilling Annex serves as a hub of sorts for Scar, as it contains a lower ground-level path and an upper area that ultimately leads to the Refinery and Wrath. Descend into the pit near the broken drill as a Force Ball to get the **Angelic Artifact**, then continue north.

Ride the Quarry Lift

At first glance, this area resembles the prior quarry centers, with a gear-driven contraption in the center, but it is a bit different. Not only must Fury rotate the structure twice in order to reach the caged elevator to the northeast, but she must then ride it down to the boardwalks below.

But that's of no concern at first. Fury's first task is to eliminate the Phantom Guard Captain before he calls for too many reinforcements. Close on the Phantom Guard Captain as quickly as you can and blast him with the Cataclysm explosion. Continue attacking, preferably in Havoc Form, so he can't use his horn to summon other Phantoms. Though he'll primarily attack with intermittent mallet swings, the Phantom Guard Captain also periodically attacks with a shield slam. Watch for the shield to flash yellow, then dodge to the side.

Multiple Phantom Guards will attack if the Phantom Guard Captain is allowed to blare his horn.

With the area free of enemies, use Salvation to strike one of the wooden beams to spin the contraption around so that the chilled wooden boards are facing those to the west. Use Stasis form to wall jump up to the walkway, then Stasis jump up the shaft to the north to find a **Demonic Artifact** and a **Human**.

One hit of the purple handle will spin the Stasis boards into the correct position.

THE 15TH HUMAN

If you've been following along closely, this latest Human rescue should be your 15th. If so, Ulthane has another reward for you. Return to Maker's Forge to gain a +30 percent Health upgrade to the Rider's Mercy relic.

Whip swing across to the east, then use Salvation to spin the wooden mast again. Switch to Stasis form while it's moving and hit the gears with an inbound throw to stop the wooden beam so you can use it to swing across to the Incandescent Remains to the north. Board the elevator to the right and stop on the switch to access the main quarry canyon.

OPEN THE FLOODGATES

You need to locate and kill Quelaag's Sister and open each locking mechanism in that order, and only then would it be possible to open the Sealed Passage and enter the Abyss. Remember that the Sister's Chamber is also fully accessible from the Undead Parish.

Right behind the ceiling is an exit to small bonfire leading home from the Lowlands.

Get back down the ladder and follow the path to the left. Be careful, there are Hollow Soldiers on the way and they can easily push you off the edge. Once you reach the Undead Burg, you will find a Merchant Hag and a Blacksmith Hag. Talk to them, they are important. Don't forget to buy the Estus Flask Shard from the Merchant Hag. Then follow the path to the left and enter the Undead Parish. Then climb the ladder to the left and enter the Firelink Shrine.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Darkroot Garden.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Darkroot Basin.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Royal Wood.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Undead Asylum.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Blighttown.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Quelaag's Domain.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Demon Ruins.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Lost Izalith.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Tomb of the Giants.

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Ash Lake.

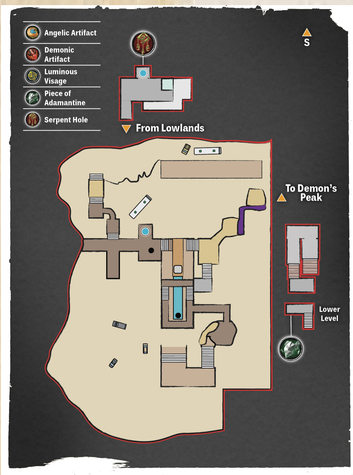

Kill the Hollow Soldier and the Hollow Archer on the bridge. Then climb the ladder to the left and enter the Kiln of the First Flame

Wrath (Revisited)

Scar: Dust Halls

TAKE SHELTER FROM THE TEMPEST UNDERGROUND

The storm ravaging the sandy Lowlands is no ordinary tornado. It's possessed with the ability to hunt Fury wherever she goes. It senses her position—even underground—and will turn from its path to chase her down and suck her into oblivion. The Force Hollow can keep her grounded while underground, but there is no safety for her on the open sandy plains. The only option is to dash as fast as you can from one subway entrance to the next.

Wait for the Tempest to get as far from Fury as possible before making a run for the subway stairs.

Storm Glide down onto the desert and immediately begin tapping the Dash button to reach the subway station to the right as fast as possible. Activate the Force Hollow and crawl through the wreckage of the partially collapsed subway station. Run down the hall, past where the Phantoms get sucked skyward, to find a **Demonic Artifact**, then head west to the Serpent Hole.

Stand atop the circular switch until a cube-shaped purple stone moves across the conveyor belt and falls onto the floor. Flame Jump from that block to the opening near the ceiling and crawl through to the adjacent room.

The only way out of this area is to get the purple stone onto the switch in the room to the north. That means getting it safely across the water-filled trench. Fortunately, this is easier than it may sound. Use Force form to open the metal gates via the switch on the upper walkway and then drop to the floor switch near the water. Activate Stasis form and run across the water, freezing it with each step. Slip behind the stone, activate the Force Hollow, and blast the stone with a charged-up swing of the Mallet of Scorn. If aimed properly, the block will slide across the ice and depress the floor switch.

Move fast to knock the block across the ice before it melts.

Continue through the tunnel and up the Force surface to the stairs leading back out onto the surface. Stay in Force form and crawl to the edge of the cover so you can scan the area outside.

The Tempest continues to rampage across the plains, and Fury barely has enough time to dash to the next subway entrance. It's imperative that you wait for the storm to get as far south as possible before making a run for it. That said, there are two Incandescent Remains to be collected. Stopping to grab either of them may cause Fury to be sucked into the storm, but with a Serpent Hole not far behind, it's a small price to pay. Just make sure to feed any Souls you have to Vulgrim before you try this.

It's worth a trip back to the Serpent Hole to get the Rage enhancement beyond the taxi.

The Incandescent Remains to the right of the subway entrance contain an **Angelic Artifact**, and the ones slightly to the left, beyond the taxi cab, contain a Luminous Visage.

Descend the stairs and continue to the purple lever. Hit it to open the gate on the left, providing a shortcut back to the Serpent Hole. Head up the slope to the right and Force Ball across the chasm. Keep the Force Hollow active as you inspect the next puzzle.

In this area, Fury must guide the purple block at the east end of the room over to the western end, all while avoiding the Tempest above the grated ceiling. Use the Force Ball to reach the eastern end of the room and collect the **Angelic Artifact** in the corridor beyond the doorway. Because you are at this end, the storm tracking you will carry the purple stone over to the edge. Use the Mallet to drive it into the lower channel, where it will slide under the hinged gate.

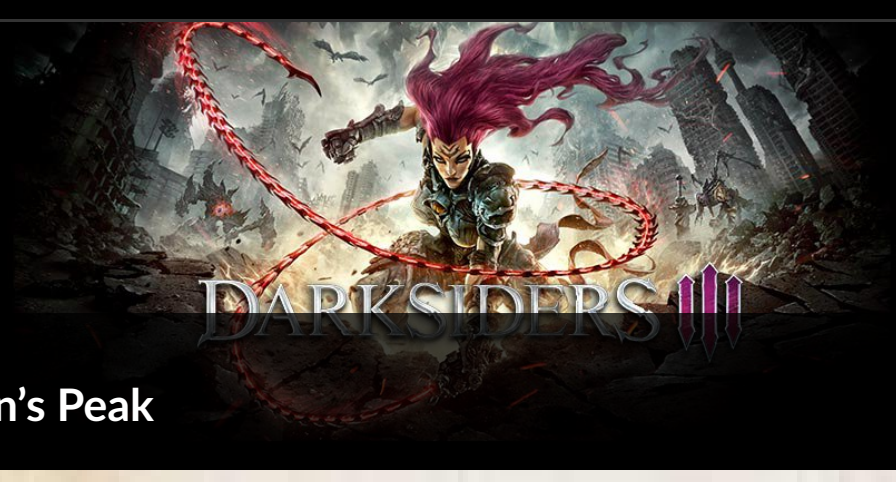

Knock the purple cube into the trench and then use the Force Ball to guide it westward.

Move to the western end of the room while the purple block is being carried by the storm. Wait for the storm to drift away and for the block to fall on the upper level, safely west of the hinged grate. Rush behind it and hit it twice with the Mallet of Scorn to drive it into position along the wooden wall to the west. Now you can Flame Jump off it and reach the upper ledge.

Wait for the storm to drop the block, then rush over and hit it with the Mallet of Scorn.

Wrath (Revisited)

Scar: Demon's Peak

DISABLE THE DRILL BIT

Ascend the stairs from the Serpent Hole and loop around to the room with the Scarab. Grab the Lurcher Cache, and head down the stairs to the left first. Here, you can grab a **Demonic Artifact** and unlock a gate leading back to the Lowlands. Return the other way and descend the stairs on the northern side to head back outside.

Several enemies, including a Trauma, lurk outside the building with the Serpent Hole. Fortunately, so does a highly flammable oil slick. Activate the Flame Hollow, bait the enemies toward the oil slick, and unleash the Chimera's Growl attack. Or, if you have a full Wrath Meter, draw them in tight and trigger the Immolation attack. Either of these will ignite the oil and inflict steady burn damage on your foes.

Set the oil on fire and bait the enemies into the flames.

Crawl through the gap in the wall next to the stairs you descended to find a **Demonic Artifact**, then crawl back through. The Large Lurcher Cache in the far corner of this sandy area is worth 10,000 Souls, so don't miss it.

Flame Jump up the cliffs to the east and catch a ride on one of the mining carts. Wait for one with its bucket open to move close to the edge, and then leap on. Feel free to slow it with Stasis form if worried about the timing. Get the items from the nearest platform and building ledge, reboard the cart, and ride it to the next platform on the left.

Be careful to dodge the spears while you ride the cart over to the next platform.

Ascend the Stasis shaft to reach the room above the massive drill at the Drilling Annex. Hit the lever with Salvation or a leaping swing of the Mallet of Scorn to raise the gears, disabling the drill below. Leap through the hole in the floor.

Disengage the gears in the upper room to stop the drill below.

➤ A STEP UP THE DRILL

The maintenance panel that falls open on the drill provides Fury with a step back up to the upper level of the Drilling Annex room. Visit the Serpent Hole and leap back up to continue.

Boss Guide
Scar Bellvary

RIDE THE CONVEYOR BELTS

Slip passed all the spiked rollers at the middle and bottom left, and ride the belts over to reach the Bellvary Spring device that activates the first boss encounter.

The Bellvary on the Bellvary Spring is much thicker than the other rats, so don't worry that someone else is. Fortunately, Bellvary is also much slower than the other rats at the factory, so you can easily keep up with it as it moves along.

Once it does, it will charge the antenna in the roof and continue to bounce the conveyor belt as the path loops around. Use the Bellvary Spring to jump to the platform on the left and then ride the belt over to the Bellvary Spring on the right. Bounce off the Bellvary Spring to reach the platform on the right. Continue to the end of the conveyor to the area guarded by the conveyor belts.

You'll find Health Stations in the middle and conveyor belt on the left and the right, and Ammo Packs at the end. Ammo Packs restore a percent of the clip with multiple shots of Grace Infusion ammo. Grab the Piece of Advanced Art by the Junction Gate and then ride the belt to the Bellvary Spring on the right. Bounce off the Bellvary Spring to reach the Piece of Advanced Art.

Once you have the Piece of Advanced Art, ride the conveyor belt to the Bellvary Spring and then use it to jump to the platform with the Junction Gate. Activate the Junction Gate to open it, and then ride the belt to the Bellvary Spring on the left. Bounce off the Bellvary Spring to reach the platform on the left. Continue to the end of the conveyor belt to the area guarded by the Bellvary Spring.

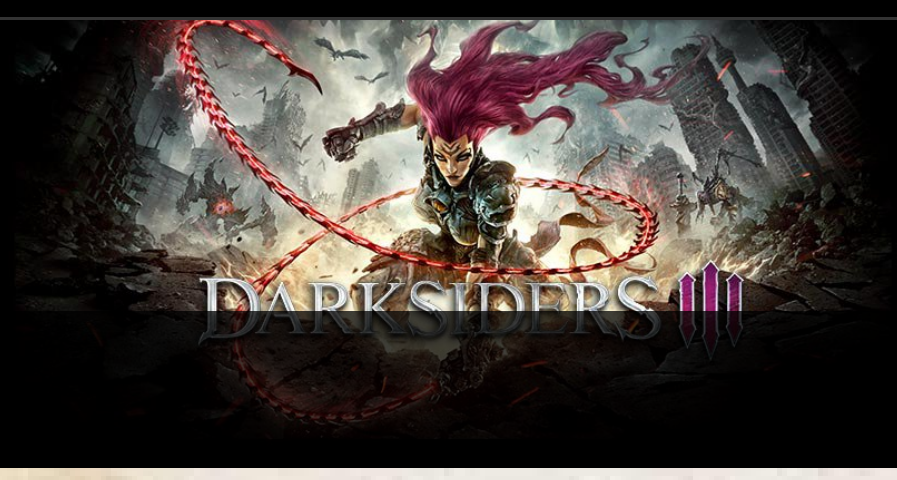

Bellvary Spring

Jump over the Bellvary Spring and then ride the conveyor belt to the Bellvary Spring on the right. Bounce off the Bellvary Spring to reach the platform on the right. Continue to the end of the conveyor belt to the area guarded by the Bellvary Spring.

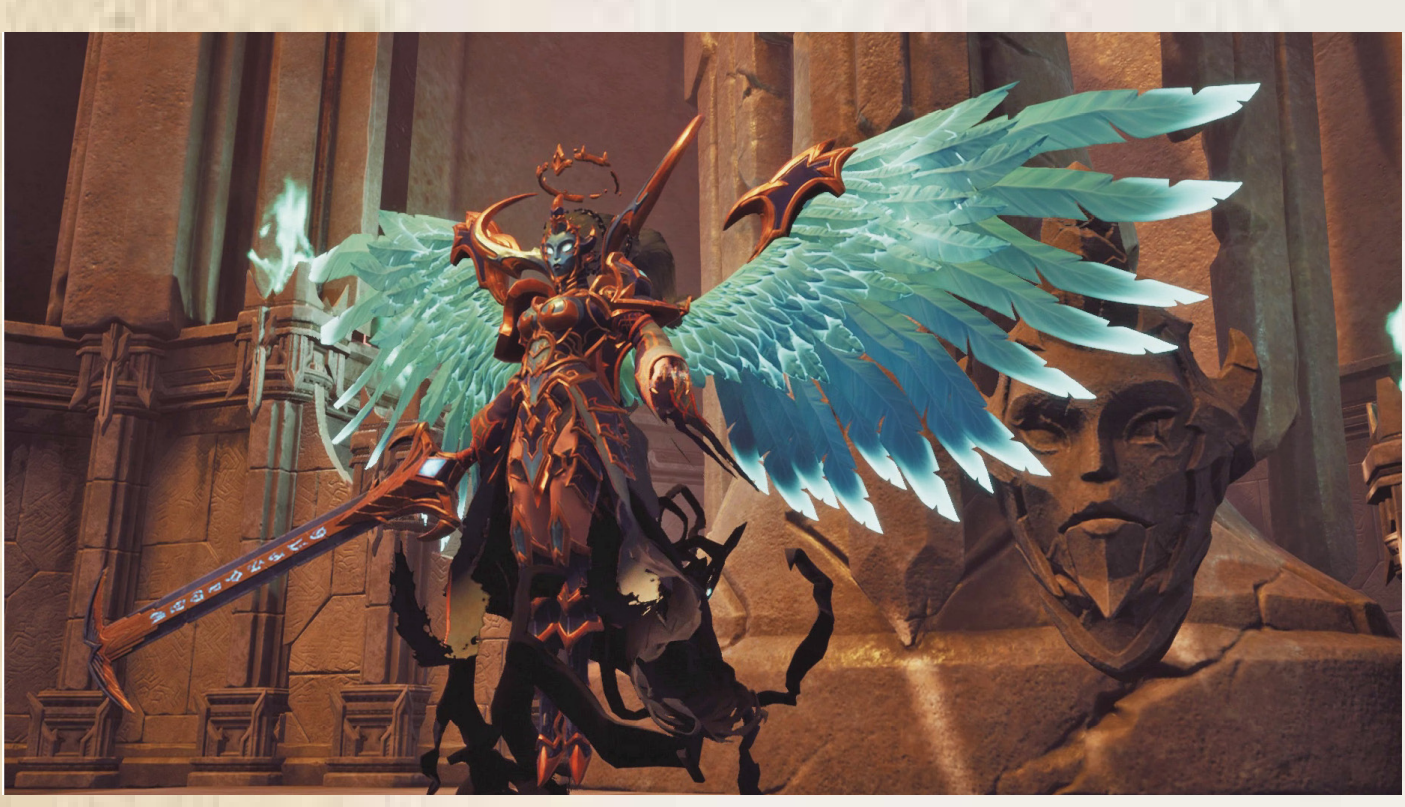

Bellvary Spring

Jump over the Bellvary Spring and then ride the conveyor

Pride

Overview

She's been waiting in Aries for Fury to finish hunting the other six Deadly Sins. Too proud to be anything but the final target, Pride is ready to welcome Fury into her throne room in Aries, just a short portal away. Fury has come far, mentally as well as physically, but her journey isn't over. The toughest battle lies ahead, and only a Horseman truly ready to face it should seek it.

Fury's Path

Finish exploring the world (optional).

Meet with Pride at Aries.

Enter the reflecting pool at Maker's Forge.

Save the Humans

17. Use the Stasis and Force Hollows to reach the uppermost level at the south end of the Sunken Tracks and break through the rocks to free this Human.

18. Break through the purple rocks in the subway station at Tangled Grotto to enter the upper part of the hive. Keep right, loop around past the water, and Flame Jump up find this Human.

19. This Human isn't far from the prior one in Tangled Grotto. Make your way around the hive to the first sign of water and then head uphill to the left.

20. Use the Mansk to reach the roof of the warehouse in the northeast corner of the Cargo Hold area.

Hades
Heroes: South East

Erebus: The Underworld

You will have unlocked the Underworld by the time you are defeating Hades in the Tartarus realm — so now the Underworld is the first realm you will be visiting on your next run. Here, you will be facing the Lernaean Hydra, Theseus & Minotaur, and Eurydice & Orpheus, as well as the Fated Persistence Chamber, which is where you will be facing the Fates (Clotho, Lachesis, & Atropos) in a boss fight that you can choose to skip.

Your Keepsake for this realm is the Lucky Tooth, which grants you a bonus Death Defiance (+1 Max). Also, you will be able to find Chthonic Coin Purses, which grant you a bonus amount of Chthonic Coin (+50) when you find them. Finally, you will be able to find Darkness, which is a currency that you can spend on Mirror of Night upgrades. Each of these items can be found in the Erebus realm and also the Elysium realm. Like all realms, you will be facing a Mini-Boss and a Boss at the end of the realm.

ADVANCED EXPLORATION: STABLES TO LAKE

Mini-Boss: Theseus & Minotaur Mini-Boss Fight

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

ADVANCED EXPLORATION: BOATMAN TO DOCKS

Mini-Boss: Theseus & Minotaur Mini-Boss Fight

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

ADVANCED EXPLORATION: TANGLED GHOSTS

Mini-Boss: Theseus & Minotaur

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

ADVANCED EXPLORATION: CRYSTAL CAVERN TO SPIKES

Mini-Boss: Theseus & Minotaur Mini-Boss Fight

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

Mini-Boss: Theseus & Minotaur Mini-Boss Fight

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

Once you have Theseus & Minotaur defeated, you will see the Lernaean Hydra in the room to the south. Go through the room to the south and you will see the Lernaean Hydra. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Lernaean Hydra. Once you defeat the Lernaean Hydra, you will be able to find the Lernaean Hydra Fang.

Lernaean Hydra Boss Fight

Once you enter the room, the Lernaean Hydra will appear. The Lernaean Hydra will have 3 heads and will be using a Poison Spit Attack, a Poison Spit Combo, and a Poison Spit Ground Pound. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Lernaean Hydra. Once you defeat the Lernaean Hydra, you will be able to find the Lernaean Hydra Fang.

ADVANCED EXPLORATION: TWISTED END

Mini-Boss: Theseus & Minotaur Mini-Boss Fight

Theseus & Minotaur are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Theseus & Minotaur. Theseus will be wielding a Stygian Blade, and the Minotaur will be wielding a Stygian Axe. Theseus will be using his Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. The Minotaur will be using his Stygian Axe to perform a Charge Attack, a Spin Attack, and a Ground Pound.

Once you have Theseus & Minotaur defeated, you will see the Lernaean Hydra in the room to the south. Go through the room to the south and you will see the Lernaean Hydra. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Lernaean Hydra. Once you defeat the Lernaean Hydra, you will be able to find the Lernaean Hydra Fang.

Lernaean Hydra Boss Fight

Once you enter the room, the Lernaean Hydra will appear. The Lernaean Hydra will have 3 heads and will be using a Poison Spit Attack, a Poison Spit Combo, and a Poison Spit Ground Pound. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Lernaean Hydra. Once you defeat the Lernaean Hydra, you will be able to find the Lernaean Hydra Fang.

MIST PEAKS AT ARES

Once you have defeated Eurydice & Orpheus in the Fated Persistence Chamber, you will be able to find the Mist Peaks at Ares realm. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Mist Peaks at Ares realm.

Mini-Boss: Eurydice & Orpheus Mini-Boss Fight

Eurydice & Orpheus are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Eurydice & Orpheus. Eurydice will be wielding a Stygian Blade, and Orpheus will be wielding a Stygian Lyre. Eurydice will be using her Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. Orpheus will be using his Stygian Lyre to perform a Charge Attack, a Spin Attack, and a Ground Pound.

ASPHODEL: FIELDS ENDING

Once you have defeated Eurydice & Orpheus in the Fated Persistence Chamber, you will be able to find the Asphodel: Fields Ending realm. Be sure to have Hades Aid, Summoning Cast, or Zeus Boon ready to help you defeat the Asphodel: Fields Ending realm.

Mini-Boss: Eurydice & Orpheus Mini-Boss Fight

Eurydice & Orpheus are found in the first section of the Erebus. At the south end of the room under the stables, you will find a Mini-Boss fight with Eurydice & Orpheus. Eurydice will be wielding a Stygian Blade, and Orpheus will be wielding a Stygian Lyre. Eurydice will be using her Stygian Blade to perform a Dash Strike, a Spin Attack, and a Dash Strike Combo. Orpheus will be using his Stygian Lyre to perform a Charge Attack, a Spin Attack, and a Ground Pound.

Pride

Supreme Pride — Using the right key, attempt to purchase one of each of the Pride Cards through Charon's Shop. Once you have purchased one of each of the Pride Cards, you will be able to find the Supreme Pride.

Lasting Pride Pride Card — Using Charon's Shop, attempt to purchase a Lasting Pride Card. Once you have purchased the Lasting Pride Card, you will be able to find the Lasting Pride.

Fleeting Pride — Using Charon's Shop, attempt to purchase a Fleeting Pride Card. Once you have purchased the Fleeting Pride Card, you will be able to find the Fleeting Pride.

Greater Pride — Using Charon's Shop, attempt to purchase a Greater Pride Card. Once you have purchased the Greater Pride Card, you will be able to find the Greater Pride.

Standard Pride — Using Charon's Shop, attempt to purchase a Standard Pride Card. Once you have purchased the Standard Pride Card, you will be able to find the Standard Pride.

Minor Pride — Using Charon's Shop, attempt to purchase a Minor Pride Card. Once you have purchased the Minor Pride Card, you will be able to find the Minor Pride.

Lesser Pride — Using Charon's Shop, attempt to purchase a Lesser Pride Card. Once you have purchased the Lesser Pride Card, you will be able to find the Lesser Pride.

Petty Pride — Using Charon's Shop, attempt to purchase a Petty Pride Card. Once you have purchased the Petty Pride Card, you will be able to find the Petty Pride.

Base Pride — Using Charon's Shop, attempt to purchase a Base Pride Card. Once you have purchased the Base Pride Card, you will be able to find the Base Pride.

Pride Card — Using Charon's Shop, attempt to purchase a Pride Card. Once you have purchased the Pride Card, you will be able to find the Pride.

Envy

Supreme Envy — Using the right key, attempt to purchase one of each of the Envy Cards through Charon's Shop. Once you have purchased one of each of the Envy Cards, you will be able to find the Supreme Envy.

Lasting Envy Envy Card — Using Charon's Shop, attempt to purchase a Lasting Envy Card. Once you have purchased the Lasting Envy Card, you will be able to find the Lasting Envy.

Fleeting Envy — Using Charon's Shop, attempt to purchase a Fleeting Envy Card. Once you have purchased the Fleeting Envy Card, you will be able to find the Fleeting Envy.

Atlas

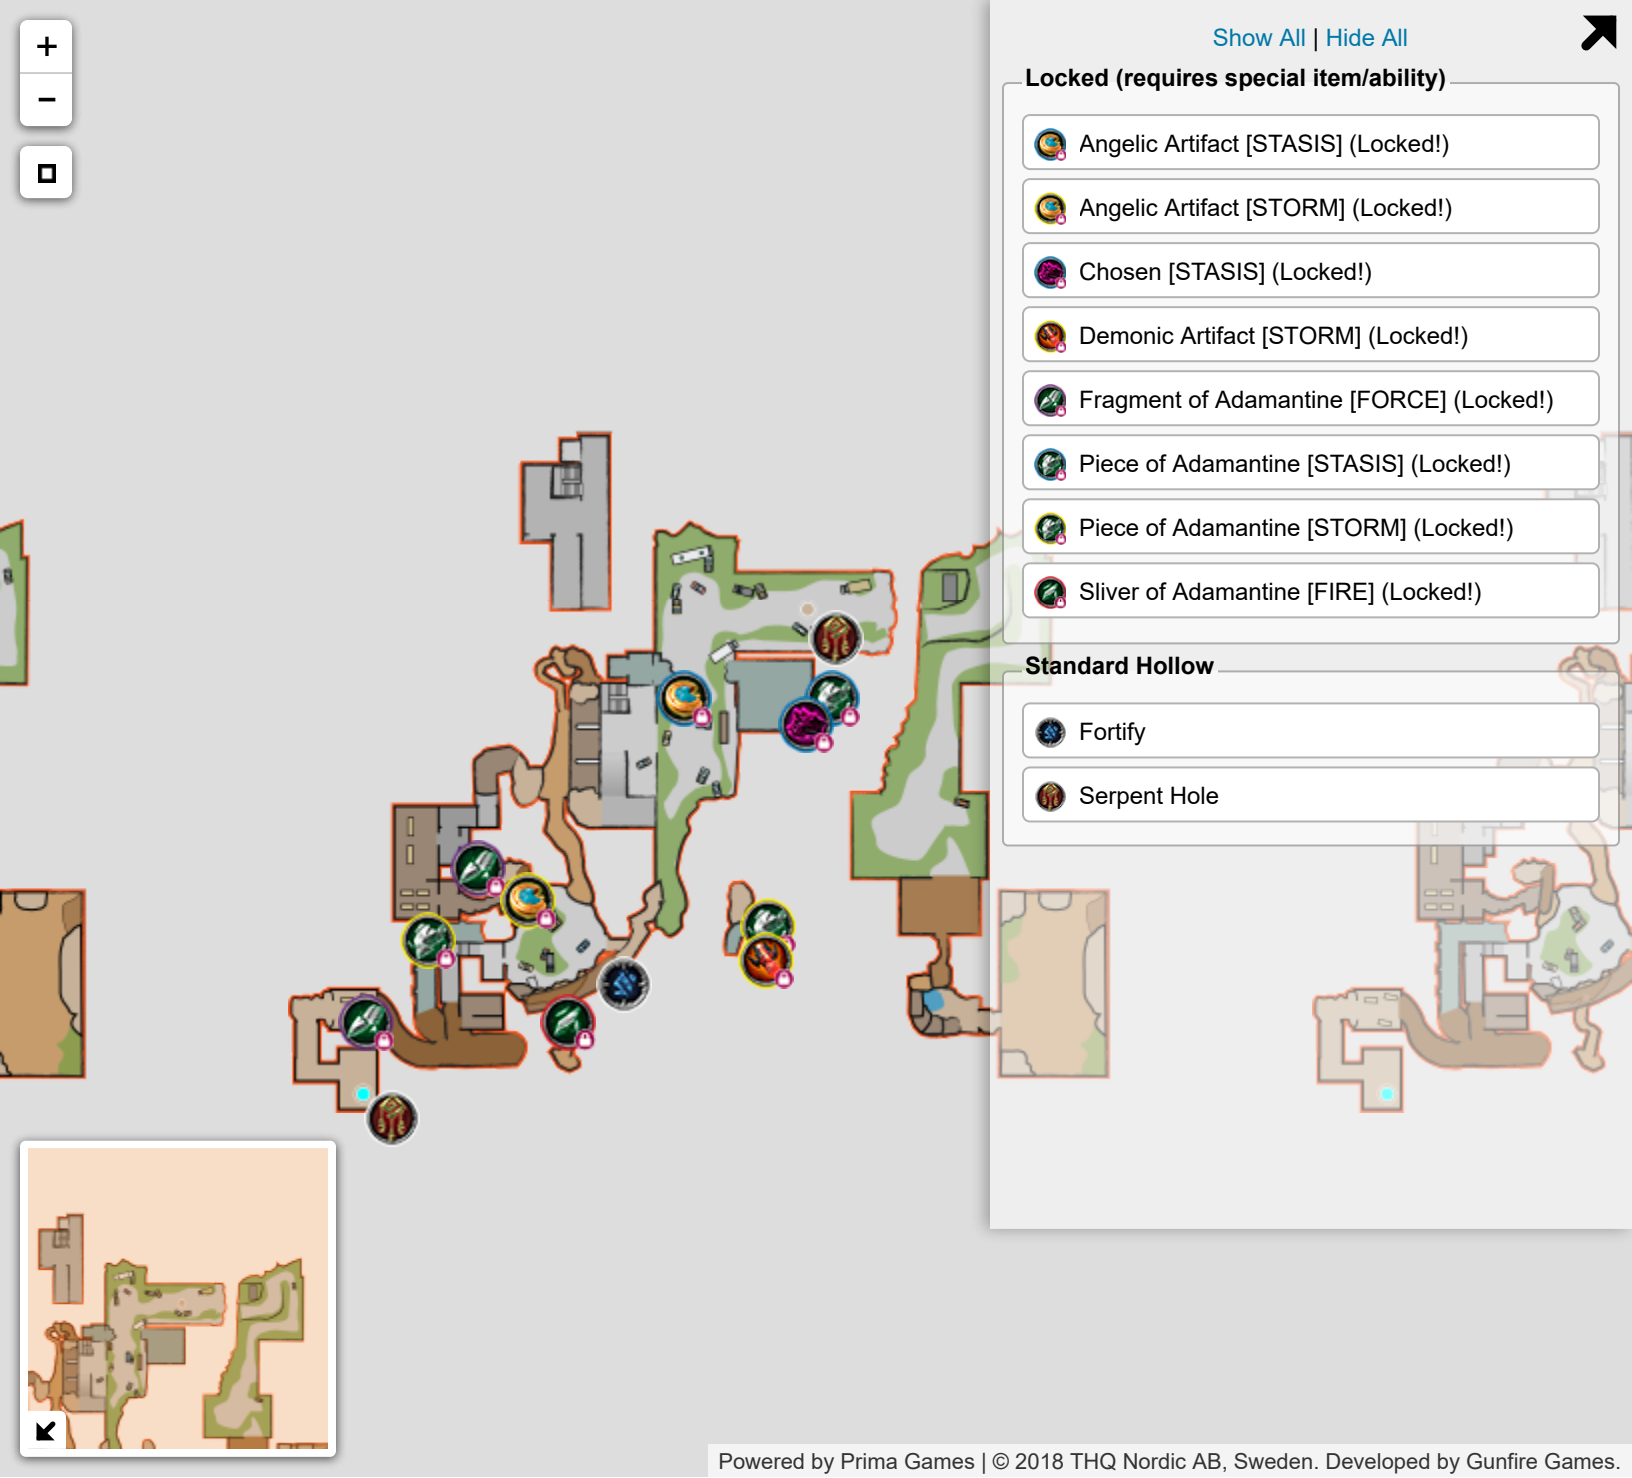

About the Atlas

The following pages contain maps to the entire world of *Darksiders III*. Here you will find the locations of every Human, crafting ingredient, Chosen, and more. When necessary, items have been color-coded to indicate the most advanced Hollow required to access it. This chapter is designed to aid those who wish to use the Serpent Hole system to explore independently of the walkthrough or find every last item before the encounter with Pride.

Achievements

Overview

The Achievements for *Darksiders III* are quite straightforward, and the bulk of them can be unlocked in a single playthrough without requiring any specific tactics. Those who aim to complete the game on Apocalyptic setting will surely have their work cut out for them, as that is by far the biggest challenge in this list. Good luck!

Achievements

Story Progress

The following Achievements are unlocked through standard play. Those who complete the campaign will unlock each of them along the way.

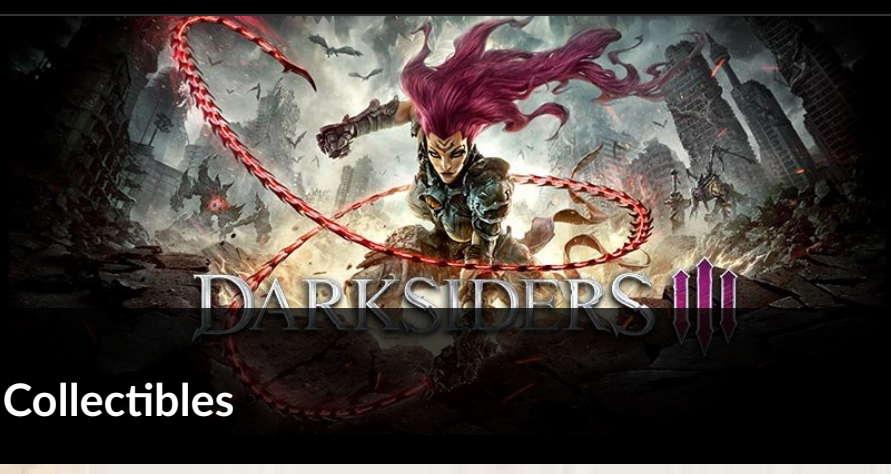

Story Progress Achievements

ICON	NAME	DESCRIPTION	POINTS
	**Green with Envy**	Defeat Envy	**20**
	**Throne Potato**	Defeat Sloth	**30**
	**All that Glitters**	Defeat Avarice	**30**

	**Path of the Horseman**	Complete the Game on Normal	**80**
	**Death Incarnate**	Complete the Game on Apocalyptic	**80**

FOR WHOM THE BELL TOLLS

While most of the Achievements unlock automatically through extensive play, you'll have to make a conscious effort to earn this one. In short, you need to avoid killing Usiel during the battle with Lust. Focus your attacks on Lust and do all you can to avoid Usiel. Since Usiel is the aggressor, lure him away from Lust, then rush to Lust while Usiel plays catch-up. Watch Lust's damage closely and look for the button prompt that ends the fight. Press it quickly to end the fight before Usiel forces your hand.

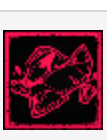

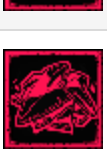

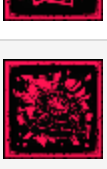

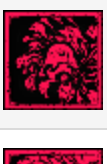

Achievements

Upgrades & Collectibles

Only those who seek out the many crafting ingredients and Humans will unlock all of the Achievements in this group. Consult the maps in the *Atlas* portion of this book for their whereabouts.

Upgrade and Collectible Achievements

ICON	NAME	DESCRIPTION	POINTS

	**Soul Reaper**	Collect 1,000,000 Souls	**20**

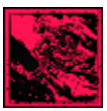

Achievements

Combat and More

Only one of these final three Achievements will likely be unlocked in a single playthrough. But for those who wish to play again on a harder difficulty—or wish to load up on Havoc Shards and farm kills before rolling credits—here's what you'll be aiming for.

Combat and Miscellaneous Achievements

ICON	NAME	DESCRIPTION	POINTS
	**Devil's in the Details**	Kill 666 Enemies	**10**
	**Beast Mode**	Defeat 666 Enemies while in Havoc Form	**20**
	**BFA**	Unlock Everything	**10**
